"I was not for aliens..."

John Gasset, French author.
(translated by Benjamin Brinkman)

Powermancer: Buildings, destruction of enemies have done it again - and more! See pages 62-63

Part and parcel of the game's success is its use of a 3D engine, which allows for a more realistic and detailed environment. See pages 62-63

With a great graphics team, the game's success is no surprise. See pages 62-63

That's our new Pink section, redesigned and established to give you the industry's most comprehensive reference section for gameplayers. In addition to the hardware and software listings, we've introduced monthly columns for nine major computer and console formats, so if you own an ST, Amiga, PC, Spectrum, Amstrad, C64, Megadrive, Sega Master, or Gameboy you can turn to the Pink each month for much more specific news and gossip. Adventure fans will find a new regular tips section hosted by Pat Winstanley, and retailer Dale Bradford begins a regular Pink Price that gives you the industry viewpoint from another angle. Not only that, but you still get the indispensable ACE Diary giving you monthly up-downs on release dates and events, the ACE Deals section with news of freebies just round the corner, and of course the ACE Charts and Stockmarket, keeping you up to date with the hottest games around.

Caprice - combining Dungeon Master style graphics with simplified gameplay. ACE report on pages 48-51

READY TO SHRED ACE turns Turtle this month, but we haven't neglected those of you with a hunger for heavyweight gaming. *Wildfire*, the extraordinary sequel to *Midwinter*; *Simulacre*, a stunningly playable *Virus* derivative from Microstyle; and *Captive*, an excellent combination of *Dungeon Master* graphics, RPG, and arcade action are just a few of the treats in this issue. We've also checked out the emerging CDTV software scene and highlighted a couple of development projects - the first wave of what promises to become a flood over the next six months. Plus news from Japan, Gameboy *Paperboy* and, when you've finished, a chance to relax in the Living Room of the Future in our CES preview feature.

Some of the original artwork for Japan (page 46), suitable for the best graphics ever in a space trading/robotic scenario

ACE

OCTOBER 1990

Wildfire - the sequel to the excellent *Midwinter* - is now really under development at Microstyle. See pg 13-19

MIDWINTER THAWS OUT!

Having ACE reporter, Mike Maynes, takes an epic journey from Euxine Station this month... In search for the sequel to *Midwinter*. Read how Mike 'Leads of *Midwinter*' Slegleton and Maelstrom Games are creating the megagame of 1990. Discover the secrets of fractal graphics and human generation. "There are 48-50 major missions in *Wildfire*, each has the scope of *Midwinter*," boasts Slegleton. Go on being, fight your *Wildfire*. It all starts on page 17

**YOU'LL NEED IMAGINATION,
SKILL, DARING... AND ERR...**

£100* FOR A 1Meg MACHINE.

* £100 is the estimated cost to upgrade your Amiga or ST from 512k to 1Mb.
If you already have a 1Mb machine it may save you something more but the price of the programme!

It's a sad fact of life that only the fortunate few will ever get to experience Will Harvey's masterwork - **The Immortal**.

Still, those of you who are lucky enough to possess 1Mb equipment or a monstrosously generous maiden aunt and a birthday coming up, you're in for a rare treat.

Using a uniquely realistic three quarter angle, you are lead through eight levels of labyrinth in a quest to find your long lost teacher Mordimar. In a world of intrigue and betrayal, mystery and blood curdling violence, you are pitted against the most ghoulishly lifelike opponents you'd never want to meet.

All in all, this is one dungeon challenge that no true enthusiast can afford to miss - no matter what the cost.

Available end of September

GOING CONSOLE CRAZY

Rik Haynes investigates the latest consoles to hit the circuit

Are you ready to become a console cowboy? Are consoles really taking over? ACE looks at the leading consoles on the market and asks the UK's top software houses for their opinions and plans.

C64 Games System (£99.99), console version of the C64, supplied with four-game compilation cartridge: *Klax* (Domark), *Friendship Freddy* (Mindscape), *Famibo's Quest* (System Three) and *International Soccer* (Commodore). Commodore believes there will be at least 100 C64 cartridges available before Christmas. Peter Blotta, Managing Director of Mindscape, states, "Mindscape want to make sure we produce the right type of game for each console." Mark Strachan, joint Managing Director of Domark, says "Domark is producing five titles on the C64 console including *Mindcraft* and *Cyberball*. For the GX4000 we'll have *Klax* and *Escape* from the Planet of the Robot Monsters - plus three other games. All ten titles will hopefully be available for Christmas." Strachan adds, "Consoles will be much bigger this year, but the Spectrum and C64 micros aren't blown out of the water yet!" Other companies producing C64 cartridges include Mindscape and Microprose. Peter Jones of Microprose says, "We'll probably produce classic games like *Silent Service* and *GunsHIP* - and new products such as *Rik Dangerous II*, *Befrayal* and *International Soccer Challenge*." US Gold is considering the following C64 carts: *California Games*, *Infiltrator*, *Impossible Mission II*, *Leaderboard* and *Gauntlet II*. But Geoff Brown, Managing Director of US Gold, states: "We'll still support C64 cassette and disk users".

Amstrad GX4000 (£99.99), console version of the CPC micro with enhanced audiovisual hardware and *Burning Rubber* games cartridge (see pages 119-120 for further details). Ocean will be converting *Robocop II*, *Batman - The Movie*, *Platoon*, *Operation Thunderbolt*, *Chase HQ* and *Shadow Warriors*. Unfortunately, Ocean was unavailable for comment as ACE went to press. Other

GX4000 games include: *Kick Off II* (Amcol), *Crazy Cars 2* (Triton) and *Pro Tennis Tour* (Ubisoft). Electronic Arts currently has no plans to develop titles on either the GX4000 or C64 console because they are "too European", Geoff Brown disagrees, "I want the Amstrad console to be successful because it's British. US Gold will be releasing *Egypt Worlds of Sport* and *Sinder II* on the GX4000".

Nintendo Super Famicom (£184) ACE has heard this new 16-bit console will be launched in Japan during November at a price of 250,000yen (£100). It apparently features a customised 16-bit central processor and incorporates a DMA circuit to speedup graphics and sound functions. The clock can be automatically switched to 1.79MHz, 2.68MHz or 3.58MHz. The CPU can access up to 128Kb of memory. The basic unit includes with 1278K RAM and 64K VRAM. Eight sounds can be played at the same time using its 16-bit PCM stereo sampler. A 32kHz sampling option is also available. It is reported that Nintendo will have thirty titles available at launch, including *Populous* (Electronic Arts), *Dungeon Master* (FTL) and *Sim City* (Maxis). No European release date has been set for the Super Famicom.

Sega Gamegear (£184), a colour handheld console with similar technology to the Sega Master System but can't use its games cartridge. It features 280A at 3.58MHz, 3.2" screen with resolution of 160x146, displays 32 colours out of a palette of 4096, 8K RAM, 16K VRAM, three tone PSG sound and one noise channel. Gamegear has a built-in speaker and 3.5mm headphone jack. It is powered by six AA batteries. Up to eight players can link-up for multi-player games. Gamegear will supposedly cost 198,000yen (£79). A tune to turn the Gamegear into a TV costs 128,000yen (£51). Sega is using several Japanese software houses to develop and transfer games such as Japan Computer System, Nihon Tele-Net, Micro Cabin, Wolf Team, Kaneko Works, Sigma Trade,

NINTENDO SUPER FAMICOM (pic courtesy of ASCII Corporation)

System Soft and Namco. The games to be developed and transferred include: *Space Harrier*, *Out Run*, *Wonderboy*, *Monaco GP* and *Future Zone II*. Gamegear cartridge prices will be in the region of 3500yen (£14). Rumours suggest Origin's *Ultima* will also be released. It is believed Gamegear will be launched in Europe sometime in the first half of '91 - although Nick Alexander, the Managing Director of Virgin/Mastertronic UK distributor of the Sega Master and Megadrive, thinks a British Gamegear price of between £100-£150 more likely.

Sega Megadrive (£189.99) to be launched in September with 20 games titles officially available over here before Christmas, including *Space Harrier II*, *Ghouls 'n' Ghosts* and *Golden Axe*. Cart prices range from £29.99-£39.99, the *Powerbase* adapter (£39.99) lets you plug-in and play Master System games. New Megadrive games include *Populous* (Electronic Arts), *Batman - The Movie* (Sunsoft) and *Super Monaco GP*. An add-on CD-ROM drive for the Megadrive has been delayed until Spring 1991 - for an expected price of 40,000yen (£160).

Nintendo Gameboy (£69.99), handheld console comes with Tetris games cartridge. A wealth of good quality Gameboy games are already available, including *Batman - The Movie* (Sunsoft), *Double Dragon* (Technos), *Teenage Mutant Ninja Turtles* (Konami), *Paperboy* (Mindscape) and *Super Mario Land*. Geoff Heath, Managing Director of Mindscape UK, says, "Mindscape supports Nintendo because of the huge American and Japanese markets. We have *Days of Thunder* and *Gauntlet II* coming out on Gameboy later this year."

Sega Master System (£79.99). US Gold is supporting the Master this Christmas with *Gauntlet*, *Impossible Mission*, *Paperboy* and *Indiana Jones and the Last Crusade*. Other USG games like *Leaderboard* and *Heroes of the Lance* will be converted over to the Master next year.

Nintendo Entertainment System (£79.99), bundled with *Teenage Mutant Ninja Turtles* (Konami) cartridge game for a limited period from September. Rumours suggest the *Turtles* cart and price will be dropped when initial stocks shell-out.

Lynx (£179.99), software is very scarce, Tengen is the only software developer really supporting the Lynx. Conversions of *Paperboy*, *Klax* and *Vandalia* are on their way before Christmas.

Which console should you buy? As Geoff Brown puts it, "There are no winners or losers at the moment." This feeling is shared by most of the other software house bosses I spoke to. "We want the micro and console to live happily together," says Peter Blotta. It's any help to you, my personal fave console decks are currently the Sega Megadrive and Nintendo Gameboy. These, along with the Commodore C64 Games System and Amstrad GX4000 video games consoles will be launched at CES Earls Court, 15-16 September, 10am-6pm. See page 131 for the ACE opinion on this dilemma.

GAMEBOY GETS E-MOTIONAL

"Are you smart? Do you have quick reflexes? Are you good enough for this game?" US Gold's 890-Rated arcade-style puzzle game E-Motion has been converted over to the Gameboy.

Released by Accolade and rebbed to The Game Of Harmony, this original and addictive title is "an arcade game for the new age in which players must use a combination of strategy, concentration and quick reflexes".

Harmony gameplay is simple but effective "You're a single spinning sphere facing a series of 50 fantastic computer generated puzzles. Your goal? Knock similar balls together and

make them disappear. Sounds simple? It's not. Each puzzle is different and requires a different strategy. Hit the wrong balls together and they multiply. If you don't clear the screen in time, the whole thing explodes. Beat this baby and you can call yourself good. Until then, you're just a pretender".

Could this be the start of synergy software? "Strategic thinking x quick reflexes = total addiction." The Spectrum, Amiga ST and PC versions of E-Motion were reviewed back in ACE 32. We hope to have a review sample of Gameboy Harmony in a couple of months.

Love, life and HARMONY on the Gameboy

ELIMINATE VIDEO THUMB

Only the Americans can produce a product like the Thumb Master. I quote "Thumb Master is the hottest new home video game accessory. A must for home video game enthusiasts of all ages (six years to adult). It covers and helps protect the thumb against the soreness that results from pushing the buttons on handheld control pads of home video game systems. Neoprene's flexibility enables free movement and agility of the thumb. It is form fitting and will not slip off the thumb. Thumb Master comes in seven hot colors - Black, Blue, Aqua, Purple, Fluorescent Green, Pink and Hot Pink - in small, medium and large sizes."

ACE gives this a big thumbs up!

ACE wonders when flavoured Thumb Masters will be released. If you're actually interested in purchasing a Thumb Master contact: Biochero Creations, PO Box 10258, Torrance, CA 90505, USA.

Turning Japanese with DeluxePaint ST

FINAL OFFER
\$5500 NOW!

ACE
on the line

The ACE Interactive News Line is the only way to get a weekly update on the latest games, people, future games technology and games currently in development. You can also win special prizes. The News Line is updated every Wednesday afternoon. Calls cost 38p per minute (peak), 25p per minute (off-peak). You're just a phone-call away from the future.

DELUXEPAINT HITS ST

Electronic Arts is finally going to release its DeluxePaint art package onto the ST. This popular program is already 'the' graphics software standard on the Amiga - it is used by every games developer in the biz. Now EA is confidently stating that DeluxePaint ST is "the ultimate graphics workstation for the ST".

"DeluxePaint ST combines paint, animation and printing in one package. Its art and animation facilities are completely usable in 512K, and it boasts more drawing modes, drawing tools and options than any other ST graphic utility."

EA is packing a comprehensive array of features into DeluxePaint ST, including realtime magnification in every tool mode, fully controllable four-point bezier curves, nine drawing modes (such as smear, cycle, blend and tint), multi-coloured airbrushes allowing mixing of colours, stencils for protecting specified areas of the screen, proportional colour fonts with six points of kerning, full font editor, three print styles (ordered, halftone and random), multiple printer resolutions, vertical and horizontal printing, and colour poster printing.

DeluxePaint ST supports the extended STE colour palette and can read or write all major graphic formats including Amiga IFF. It will be released in late September for an introductory price of £49.99 (rising to £59.99 from the beginning of December).

TOUR OF THE UNIVERSE

An exciting new space travel simulation has just opened in Osaka. The tour of the galaxy starts with you receiving a personal ID card at the check-in gate. A transit lift then takes you to the world of 21st C with a brief history of space and details of your travel plans (ouch! no!). Don't forget the 21st duty-free space goodies. This is a no pain ride - you get a vaccine shot in the middle before you blast. The space shuttle to Jupiter flies at 96% of the speed of light. The tour costs 2000yen (€9) adults, 1500yen (€6) students and 1000yen (€4) children. It's open every day of the year from 10.00am to 8.00pm.

BOULDERDASH

Boulderdash, the infamously playable C64 classic from First Star Software, has just made an appearance on the Gameboy Victor Musical Industries converted this Chris Grey and Peter Upton arcade puzzle game onto Nintendo's most handheld console. Mark C64 Boulderdash veterans (including Steve Cooks and myself) agree it would make a perfect Gameboy release. We can't wait to grab a copy - look out for the ACE review

360 ARCADE ATTACK

Sega is following its hybrid arcade hits of Space Harrier, After Burner, Galaxy Force II and Super Monaco GP with R 360. This new coin-op sensation has two screen monitors (power unit) and serve drive or (controller) to turn its cockpit 360. Games will never 'feel' the same again. You'll actually slide, swoop and swoop as you blast that and of level spirit. G-Linc is the only game available on this new system at present, but Sega is currently developing more thrilling games to coincide with R 360's official debut later in the autumn. Sega's next project is to build large-scale amusement centers all over Japan. These will, of course, feature the R 360!

GALAXY FORCE II

The classy three-axe Sega shoot-'em-up, Galaxy Force II, has been converted to the Fujitsu FM Towns by CRI (CRI Research Institute). It costs 9800yen (€38). CRI also handled the excellent FM Towns remakes of Afterburner and Out Run. Games releases are starting to pick-up on this 32-bit Compact Disc micro. CD-ROM conversions of Indiana Jones and the Last Crusade, Dungeon Master, Sini City and Populous are now readily available in Japanese stores.

ACE IN JAPAN

What's fun in the land of the Rising Sun? Find out courtesy of this new monthly update by Rik Haynes, with help from Masato Niizeki and ASCII Corporation...

R-TYPE RIOERS

Irem, a leading Japanese games house responsible for the cult coin-op R-Type, is sponsoring two top motorcycle riders for professional racing.

LEGEND OF THE LOST

THE
SEARCH
IS ON!

SEVEN LEVELS
OF STARTLING
ARCADE ACTION!

IMPRESSIONS • RIVERBANK HOUSE • PUTNEY BRIDGE APPROACH • LONDON • SW6 3JD
S O F T W A R E W I T H S T Y L E

VOODOO NIGHTMARE

"It's dead big and well wiggly!" Boots Parker takes on soldiers, scorpions and snakes in darkest Africa. Dodge blowdarts or suffer temporary blindness, paralysis, sleep and hyper activity. A monkey will cling to your back and harass you until you have found enough bananas to satisfy him. Palara Software will release this on Amiga and ST at the end of October.

ESWAT

Police the future with Enhanced Special Weapons and Tactics. Put your heart out Robocop. US Gold multi-

format release for later this year. See the Sega Megadrive review on page 91.

FIREBALL

"Fireball combines the skill of soccer, the speed of ice hockey and the strategy of rollerball." Break at the floor scroll, pass at the guardians. The players are encased in a robot total-body armour nicknamed the Over. Amiga and ST release from Microprose.

LOTUS ESPRIT TURBO CHALLENGE

The Lotus Esprit Turbo accelerates from 0 to 60 mph in 4.7 seconds. "In April 1990, Gremlin and Lotus reached an agreement which gives Gremlin the exclusive world rights to use Lotus cars in home computer and console entertainment software. Two fundamental aims. The game must be better than any similar game available. The game must offer something new in the challenge it presents to the player or players." Inspired by the split sim-play of Pitstop II, Lotus Esprit Turbo Challenge will be burning rubber in the autumn on Amiga, ST, PC, Spectrum, C64 and CPC.

RICK DANGEROUS II

Tricky Ricky is back. Side splitting cartoon graphics are a definite hit in RD II. Rick dies, Rick expands, Rick-a-mortis sets in.

Fortunately the game is compulsive enough to keep you coming back for more dealings with the Fat Men. Out for Amiga and ST by Microprose. ACE review next month.

MR OOI RUN RUN

Mr De's just done the doc, and you can too. Based around the classic cult coin op. From Electrocoin Software for £14.99 on ST and Amiga. Start of a new Arcade Classics label with releases every few weeks. Luthar De Gale, the black-belt boss of Electrocoin.

Software, explains: "The Arcade Classics label supplies the playability and the fun, but with improved graphical and internal features which bring these products into the 90's with out losing any of their original appeal."

DREAMS AND VISIONS

Rik Haynes takes a trip to tomorrow...

RICK ROGERS: COUNTDOWN TO DOOMSDAY

Rick Rogers, pilot of the future, is making maga bucks for TSR. "US Gold will be fully exploiting the cross-marketing opportunities that Rick Rogers offers. Indeed, we have already signed a cross-promotional deal with Penguin Books." For cross read gross? Countdown to Doomsday will use a similar game system to Pool of Radiance, Re NEO (New Earth Organisation) and full RAM

(Russo-American Mercantile). Due in September on Amiga, PC and C64 disk. No other versions are planned. "Rick Rogers is a Trademark owned by, and used under license from, The Dilla Family Trust."

GREMLINS 2

Don't expose them to light. Don't get them wet. Don't feed them after midnight. Gremlins 2 - The New Batch movie grossed \$2,507,143 in the first three days. Will the forthcoming computer game from Elite pack a similar performance?

XIPHOS

THE UNIVERSE UNFOLDS

- Incorporating state of the art super fast 3D graphics, **XIPHOS** displays space conflict in more detail than ever before
- Cruise around and watch life and death epic space battles – join in if you dare!
- Fly through space fields, talk to aliens, meet strange creatures and explore six massive universes attempting to confront the super intelligent **XIPHOS**.
- **XIPHOS** is not for the meek, pregnant, those of weak constitution or those suffering from back or heart complaints
- **AVAILABLE FOR AMIGA, ST AND IBM PC COMPATIBLES AT £24.99**

Role Playing Rumpus

All this RPG action, on the increase since the success of games like *Heroes of the Lance* and *Ultima*, has got one reader up in arms...

A LOAD OF BULL! I am writing to complain about the panel on page 84 of Issue 34, entitled *RPG-Rip Off!* It is really a load of bull, to be quite frank. Any computer game which says RPG on the cover is misleading the customer. This is simply because a computer role playing game is not possible!

A role playing game is just that: you play roles. It is very like acting. It is not a product of the number of characters present, or a product of the number of characteristics that these characters have. Role playing stems from the way characters behave in certain situations, the way they speak to others, their personal idiosyncrasies. It is quite possible to have four characters with exactly the same characteristics, but which are all very different.

Computer RPG's simply cannot allow for such character development, and therefore they cannot really be called RPG's. You have to agree that, in a CRPG, if the characters have the same characteristics, they will

behave in the same manner, and this is simply not so in a real RPG.

Finally, let me tear your RPG character apart, point by point.

1. The numbers of characters in a party has absolutely no effect on whether or not the game is an RPG.
2. Even if each character had 57 attributes, the game would not be an RPG.
3. Remember *Doomdark's Revenge* on the Spectrum? Each 'character' in that game had well over 4 attributes, all of which had a noticeable effect on the game. Would you call this an RPG?
4. All games should have SAVE options!
5. I once had a pair of identical twins in an AD&D game. One was a lawful good priest dedicated to healing all ills, the other was an evil assassin dedicated to eliminating all life on Krynn.

6. In a true RPG there would be an infinite number of character classes, as characters are free to do whatever they like.

Don't get me wrong. If all programmers stuck to your charter then it would be a wonderful world to play games in! However, not a single one of these wonderful computer games would be an RPG, not even the most powerful CRAY supercomputer could replace the *Dungeon Master*!

Tony Park, Tottington

IT'S A BARGAIN?

Last month we published some correspondence from readers who were complaining about the cost of software. We asked software houses to reply but in the rush to go to press most spokesmen were 'unavailable'. Electronic Zoo and Electronic Arts both put their heads on the block, however...

"We'd love to see prices reduced, but until piracy stops it won't happen. The industry is still in a ghetto where it comes to developing software - there just haven't been enough to machines sold to enable us to drop the price."

Stuart Bell, Electronic Zoo

"We spend at LEAST two men years development on our titles. Although we would like to see prices drop, until the market base increases they are likely to stay as they are."

Simon Jeffries, Electronic Arts

...and finally, ACE editor Steve Cooke claims that:

"...at the end of the day, however, the true test of pricing is whether the user will buy a product and feel he has received value for money. Of course there are some turkeys out there, but there are still many games around that, given the hours of pleasure they can bring, are bargains at the price. Most pricing moans are really criticisms of the product, not the money."

WE'RE WAITING!

Dear Mr. Editor: I am writing to you because I will be the top game of the future, along with *Whoddy Watters* and *Scott Adams* adventures. He's just one of the people who gave us a good laugh (and sometimes a good cry) with their letters this month. Next issue we will be running three pages of letters and we're dying to hear from you. Flashy types can fax us on 071 450 1054 and the snail delivers the mail to ACE Letters, Priory Court, 20-22 Farringdon Lane, London, EC1R 3AU - and every month we give £25 of free software to the sender of the ACE Prize Letter.

The *White Wizard* (ex-PCG, Zzap 64, and early ACE issues) writes from his cave in the Shetland Isles that "...the conflict between computer 'role-players' and table top RPG'ers will never cease. In the final analysis, no, you can never have a true role-playing game on a computer. But so-called computer RPG's have developed a life of their own and game designers like Richard (Ultima) Garriott and Interplay (*Bards Tale*) deserve credit for this. The RPG Charter seems a reasonable set of statements to me - as you seem to imply yourself in your final para - but only if it is applied to computer role playing games - which is exactly what was intended."

FUTURE SHOCKS

I am writing to you from the far distant future to aid you in your quest to find out what the fates have in store for computer gaming.

Here in my time, one all-pervasive force has a stranglehold over the entire computer community, leaving all other computer systems out in the cold. The brilliant Amiga C8000 with stunning mind-graphics and twin read/write CD drives doesn't even get a look in. Even the Atari STFM-E-FMV-TOS Enhanced 4096+ with twin 32-bit processors and dedicated 60000 graphics processor is left for dead.

In fact, the only computers that are permitted by the Emperor Ibern Bert Miles (known as IBM) are the IBM range, the latest of which is the IBM PS/5 80986. No other computers are allowed.

Actually, this isn't too bad, since the graphics standard on the new model is SE-EVGA Professional, with a resolution of 2560*2048 in more colours than the eye can discern. The PS/5 also has a 96 bit processor running at 106 MIPS. This PC costs 7590 IBMdollars, which is pretty much the same as 500 of your time's one pound fipples.

Admittedly, excluding all competition by death threats is not a nice way to carry on, but IBM is backed by the Emperor so that can get away with it.

As for software, there is a slight deficiency here - only one game is allowed, but luckily it is an amalgamation of virtually all game styles - incredibly interesting, deep, and great fun too. The name of the game? Elite 20.

The object of the game is to become Elite and fly your ship (preferably in

the PS/5's hydraulic cabin) watching the unbelievable 3D graphics - 95000506 polygons are used for the torpedoes alone. Once you have attained Elite status you become real life Prime Minister of Earth colony 06 (planet Earth to you), but as yet there are colossal efforts by people to replace the Prime Minister (Mrs Thatcher) every day.

So there you have it. The future of the games industry is Elite 2 on the PC. An utterly amazing game with incredible graphics and blinding depths of gameplay. However there is one major downfall of the program, a small flaw with the computer design that causes a great loss to the gameplaying experience...it's like this: when IBM designed the first 8086PC they did not envisage it as a games machine, and only provided a pathetic sound chip and tinny speaker.

Since then, IBM have not bothered to upgrade the PC sound, so whenever you let off a huge 95000506 polygon torpedo listening into the moody starlight with its awesome exhaust trail...

...you get a little beep to show it has launched. And another if it destroys the enemy. And when you converse with an alien...Well...ac... David Stafford, Citizens No 06-16028085

Some things never change: PC sound, Mac prices, and Spectrum graphics...

F-29 RETALIATION

After recently purchasing AMOS and not so recently F-29 Retaliator for the Amiga, I thought that something had to be said about the quality of products arriving on the market.

Don't get me wrong. F-29 does contain some of the best vector graphics and sound yet to be beaten, but the sheer number of bugs that were so blatantly obvious after playing for several hours put me off the game totally. Since then I have played the game very little as I feel that the bugs ruin the game to such an extent as to make it unplayable. For instance, the multi-function display unit contains an artificial horizon that is at the best of times incomprehensible. Also, while flying past a piece of scenery, it is possible to crash into it yet you are not actually touching it.

This seemingly bug-ridden game cost me £25 and after playing it I came to the conclusion that either the playtesters were blind or that the product hadn't been playtested at all.

Now onto Mandarin's AMOS. After reading several reviews of this new BASIC language, I decided to buy it with incidentally cost me £50.

AMOS had been presented with an excellent manual and an even better editor. Several hours later the computer crashed again for the seventh time, so I decided enough was enough for that day and switched the computer off.

No more than a week later I had discovered that more than several commands documented in the manual did not actually exist which to me seems unbelievable. Admittedly there are over 500 commands, it says, but to me this does not justify the amount of checking that had not gone into the product costing £50, which is such a shame because AMOS is an excellent product.

My message to all software houses is that unless their products are checked more thoroughly they cannot really mean when people prefer playing safe and copying software than buying software with the chance that it is bug-ridden.

Lastly, on a somewhat lighter note, just as important. Do you still sell the ACE Binder as I have all 35 issues but have no binder to put the last 11 issues in.

Stephen Williams, Reading.

ACE was the only magazine to specifically mention the bugs in F29 when we reviewed it. We were assured at the time by Ocean that bug-ridden versions would be withdrawn in our opinion (and we're not lawyers, remember), if bugs make a game unplayable then it is not fit for the purpose for which it was sold and you should be entitled to a refund from the dealer. Perhaps you might like to check with your local Consumer Advice Centre for guidance.

GAMEBOY GLORY

I've got this little gadget called the Gameboy. It's graphics are laughable and the sound is just better than the Spectrum's. But when it comes to playability it knocks out my (expensive) ST. Why is it that most 16-bit computer games are rubbish compared to console games? I think that there is something substantially wrong with the UK programmer's view of writing/converting a game. Why not get in touch with the Japanese programmers and swap some tips etc? (The PC Engine's Chase HQ beats the ST and Amiga versions hands down. Is the hardware used comparable?)

Could you please review some GAMEBOY games? I've seen that there are lots of new games coming out like Batman, Double Dragon, Nemesis, NFL Football etc.

Jay Lee The Netherlands

Firstly, to say that "most 16-bit computer games are rubbish compared to console games" must either mean that you continually play/buy all the wrong 16-bit software, or that the titles you considered unworthy in the past have soured your view somewhat. In addition to which, you don't say which type of game you find better on the console. All of them? If so, you must surely realise what a generalised, inaccurate statement this is.

However, we agree with you about the general high standard of Gameboy titles, and we're covering them more and more (see this issue's Console Screentest section).

P.S.

Don't forget - we give a prize every month to the sender of the letter that occupies the Prize Letter slot on these pages. Every Prize Letter scribbler gets a software prize worth up to £25 for his or her machine, so get that pen out now and address the world...

MIKE and the MECHANICS

Wildfire, the follow-up to *Midwinter*, is one of the most ambitious projects in the history of strategy action games. If you thought *Lords of Midnight* and *Midwinter* were big, wait till you map Wildfire's 120Mb of fractal landscapes.

"There are approximately 40-50 missions in Wildfire, each has the scope of *Midwinter*," confirms Mike Singleton—director of Maelstrom Games and veteran games creator.

Wildfire plays in a similar way to *Midwinter*—only Maelstrom has tweaked its gameplay to the boundaries of recognition. Singleton took note of gamers' praise and criticism of *Midwinter*. "We're trying to make *Wildfire* like an action movie, with you taking the role of a James Bond/Indiana Jones style character. We'll mimic this within a solid graphics environment. With *Wildfire*, you can choose a short mission, lasting 1-2 hours, for a quick blast. But if you want, the strategy elements link-up together to create a campaign style of game."

GO WILD IN THE COUNTRY

The story so far: After the thaw of *Midwinter* Island, the population have moved south to what were once the Cape Verde islands, off the West coast of Africa. Already known as the Slave Isles, these archipelagos are under the control of the powerful Saharan Empire. Once established in their new home, the *Midwinter*'s form a new state, the Atlantic Federation. War with the Saharan Empire is inevitable. Playing a secret agent, you're on a covert mission to recruit more Slave Isles to the fledgling Federation. You'll have to fight for your freedom, but at least you get six months grace before the Saharan Armada sets off to kick your rebel butt.

Wildfire can be played on three different levels. Training, Solo Mission (a single mission on an enemy held island) and Campaign Game (a variety of

What is Mike Singleton, veteran games creator of *Midwinter* and *Lords of Midnight*, working on now? Rik Haynes exclusively previews *WILDFIRE*, the follow-up to *Midwinter*, and STARLORD...

An early demo of *WILDFIRE* in action. Don't worry about the strange colour of the central panel. The 2D graphics are enhanced versions of those found in *Midwinter*.

ISLANDS IN THE SUN

Maelstrom uses fractal graphics to generate the Slave Isles in *Wildfire*. There are 40-50 major islands in the group, each with their own individual political, administrative and cultural identity. Using icons, you can select a flat map, isometric side-view, sea-bed or political map of the area. Covering some 600 miles, the Slave Isles are based on the Cape Verde Islands off the West coast of Africa.

THE WILDFIRE SQUAD (back row) Steve Mutterfield (Executive Assistant), George Williamson (Programmer), Mike Singleton (Project Leader), Game Design, Maths & AI, Hugh Bartlett (Business Strategy), Andy Elbertson (Graphics Designer), Randy Parker (Research and Preparation of Narrative Text), (front row) Dave "Doc" Gaudy (Programmer), Val Francis (Programmer), Dave "Dilla" Ellison (Senior Programmer).

missions on different islands. Each mission effectively self-contained. Once these missions have been mastered, you fight a running battle with the Salutan Armada as it heads for the Federation home base.

YOUR MISSION SHOULD YOU ACCEPT IT...

There are 40-50 major islands in *Wildfire*. Every one has its own political, administrative and cultural perspective. Each contains a particular mission. During the game you could sabotage a power station, smuggle arms to the resistance, assassinate an island's chief of secret police, capture a TV station or hunt out and eliminate a traitor in the resistance.

Shaping your physical health

The missions can be very complex, detailed and filled with subplots. In the first example (sabotage a power station), you might have to steal explosives from a local army base, find the engineer who designed the power station, free his daughter from jail to persuade him to hand over the plans, hijack an army truck to use as a vehicle, kill the sentry, plant the explosives and escape to safety.

Although you're pretty much on your own, you can find or recruit resistance fighters for information, shelter, food, clothing, weapons, ammunition, papers and transport. *Wildfire* will incorporate 20-25 forms of transport, including: biplanes, zeppelins, flying boats, rocket packs, jetskis, tanks, trains and rope slides.

Maelstrom has added Special Action Sequences to make *Wildfire* more film-like. "During the game you can enter buildings, lay dynamite, pick up weapons and switch vehicles without leaving the solid graphics environment," states Singleton.

I WANT TO BE A PEARL OYER

Wildfire will feature thousands of individual human characters to interact with. Amazingly, each will have their own looks, personality and life history. Maelstrom's custom-made character designer is an ingenious solution to the immense problem of creating the huge amounts of data required by every character in *Wildfire*. Split into several editors, the character designer is used to create individual portraits, personalities and life-stories.

With the face creator you choose the hair style and colour, nose, mouth, eyes, ears, skin tone, etc and lay them out on a blank face according to taste. "Hopefully the faces will be polygon generated - allowing them to be animated and show expression," says Singleton.

LORDS OF LYNX

If the Lynx colour hand-held console does well, Maelstrom will probably convert *Lords of Midnight* over to it. "The Lynx is the perfect console for *Lords of Midnight* because of the sprite scaling," says Mike Singleton. So keep your fingers crossed!

Each character's complex background story can be generated in a matter of minutes. With the sentence constructor, you're allowed to alter the type (0-31) and syntax (0-7) of up to five words in every sentence. For example: She had a happy childhood. The happy could be changed to caustic, wild, idyllic, lazy, innocent, exciting, adventurous, contented, ordinary, mindnumbing, lonely, hard, stormy, unhappy, desolate, painful, harsh, etc. The 'a' is automatically changed to 'an' where appropriate. In this example, the 'she' and 'childhood' could also be substituted for other words.

Time to get personal. The character designer also specifies the characters sex (male or female) - no aliens allowed at present, status (single, married, divorced, widowed), no. of children, age, title (labo, nurse, sergeant, bishop, militia, etc), lastname, surname, occupation, eagerness and treachery (0-100%). The *Wildfire* job market is wide and diverse, including occupations as archeologist

FORMING A FRACTAL FANTASY

Any irregular shape, form or distribution retains its irregularity at any magnification. Fractal geometry, invented by Professor Benoit Mandelbrot, is used to "create shapes that are perfectly repeatable, controllable and have measurable properties which are at the same time indistinguishable, to a large extent, from the messiness of the world". In effect, fractal graphics can simulate artificial worlds which look natural and feel real. They've been used in military simulations, movies and Maelstrom's *Midwinter* and *Wildfire* computer games. Mike Singleton explains how.

Maelstrom's fractal landscape generator works on a square grid with each point in the grid given its own particular height above or below sea level. This is called the heightgrid. When the landscape is redisplayed in solid 3D, the graphics routines look at the heightgrid and interpret it as a three dimensional surface - displaying each square in the grid as two right-angled triangles. If we drew the square as a single surface, we get visual errors because with each of the four corner points having different heights, it's not flat. On the other hand, every triangle is, without fail, a flat surface.

"We start with a small, predefined grid of 80x50 control points, so we can manipulate the broad outline of the landscape. Someone sits down and manually sets the heights of all three points using our landscape designer utility. This way, the rough shape of islands, mountain ranges, etc can be deliberately chosen. The outline of the British Isles, for instance, could be mimicked quite realistically. Beyond this, however, random fractal techniques take over and fill in the detail of all the in-between points. As we zoom in further, more in-between points are fractally generated. By the time we'd zoomed in our map of Britain to the level of the Isle of Wight, you'd notice that the rough outline is still faithful but some of its details are different to the real thing."

"At each level of zoom, we do a 2x2 magnification. This means generating three new in-between points for every existing point (see fig 1). To generate in-between points, we use a 4-way interpolation (see fig 2). To make a new point, we take the four nearest existing points and average their heights. We then add a small negative or positive displacement to the average height to increase or decrease the new height. The displacement is chosen pseudo-randomly. A pseudo-random number is one that looks random but can, in fact, be reproduced again and again providing you use the same seed number. We use the map coordinate of the new point as the seed number for the random displacement, so that each time we generate the same area of landscape, we get exactly the same design. The result is a new heightgrid (see fig 3) with four times as many points. All the in-between points differ slightly from the average height at that position, creating new bumps and dips each time you zoom in."

"To keep memory requirements to a minimum, we only store 4000 points in memory at any one time. To expand this to a full-screen map with each pixel having its own particular height, we do two unseen magnifications before writing to the screen, generating 60000 points each time round. In *Wildfire*, you can zoom in five times over. This is the equivalent to seeing a map made up of 85 million pixels and over 1200Mb of data. Unless, Microprose is going to give away hard disks with its games in future, fractals are the only way to do it!"

"I'd like to do a virtual reality version of *Lords of Midnight*."

Mike Singleton

One of the Aztec-style buildings in *WILDFIRE*

gist, acrobat, beggar, belly dancer, chat show host, chimney sweep, DJ, demolition expert, errand boy, engraver, faith healer, fire eater, grave digger, guru (Steve Cooke), hermit (Steve Cooke again), layabout (Rik Haynes), monk, poet, diver, pimp, rascal, snake charmer and tabloid.

Susceptibility to persuasion is another character feature in the edit suite. A character reacts to charm, sex appeal, bribery, threats, reason, pleading, authority and deception can each be set at poor, average, good or excellent. Each character can agree to help, be non-committal, refuse or refuse with violence.

So with this full character designer and cunning memory compression techniques, Maelstrom is creating up to 2000 individual characters in *Wildfire*, each with their very own history, personality and portrait. As Singleton points out, "One of the objectives with *Wildfire* is to get personalities in the game."

Wildfire is shaping up to be the megagame of 1990. The size and complexity of the game is incredible. I've only scratched the surface of the game in this preview, if Mike and his micro mechanics can deliver all that's promised, they have the makings of an ACE-Rated game. Look out for a full ACE review in the near future. I'll leave the final words to Mike Singleton, "We want to make *Wildfire* authentic, interesting, and above all, fun to play."

MIDWINTER SECRETS

You can fly the hang glider into the cable-car station and land inside. This is the only building you can enter in the game. Be warned, it's very difficult to do if you're very skilful, you can even fly-in through the door and fly-out through the window.

"Microprose have got it together... they push our products from the word go."

Hugh Estlinbury

ONCE AN ENGLISH TEACHER

Mike Singleton began his coding career by programming a mainframe computer at Lancaster University back in 1968. "It was a good time to be a student," laughs Singleton. He studied theoretical physics for a year before deciding life would be more groovy as an English teacher. Singleton wrote his first game, *Space Ace* for the Commodore Pet in 1979. Other Pet games followed, but Singleton's first hit came with the ZX81 *Games Pack One*, a compilation of six UK games, earned him £6000. Singleton's job as a teacher was over; his career as a full-time games creator had begun.

During 1982, Singleton wrote *Vic-2D* versions of *Sneak Plt*, *Shadowfax* and *Sledge*. He debilitated in cyberspace the following year, with *Three Deep Space*, a stereoscopic game for the Spectrum, C64, BBC and *Vic-2D*. Perhaps Singleton's most widely regarded game was released in 1984 by Beyond - which, at the time, was owned by EMAP (the company behind ACE). *Lords of Midnight*, an epic fantasy strategy adventure, was soon regarded a classic Spectrum game.

Over the next three years, Singleton developed *Doomdark's Revenge* (follow-up to *Lords of Midnight*), *Quake Minus One* (icon-driven strategy arcade game for the C64), *Star Trek* (started life as a multivision system demo on the Spectrum - Singleton just provided the games design), *Dark Squire* (Maelstrom's first game), *War in Middle Earth* (8-bit versions only) and *Whirligig* (3D shoot-'em-up with 4000 polygons per second - the polygons were turned into sprites for extra speed).

Singleton started a 'nice little sideline' in 1981. *Starlord* was a popular sci-fi play-by-mail game which continued on till 1986. Maelstrom is now converting *Starlord* into a computer game, due for release sometime in 1991.

Maelstrom's first 16-bit megagame, the 948 ACE-Rated *Starlord*, was released earlier this year (see ACE 32). *Wildfire*, the sequel to *Midwinter*, will be the next Maelstrom game - scheduled to be released in November by Microprose on the Rainbird label.

Face creating utility (see *Wildfire* for a full Pearl Diver build) You'll be able to design your own character in the game using this system.

STARLORD

The next Maelstrom game, after *Wildfire*, will be based around Mike Singleton's popular play-by-mail game. Converting *Starlord* to computer is a massive undertaking for Maelstrom. Featuring five solar systems and 5000 planets, this 'cerebral game' uses light-sourced 3D graphics. *Starlord* can be played at a grand strategic, tactical or action level. Up to 15 people will be able to play the game. There are 20 types of spacecraft in *Starlord* including Blister, Harusdet, Drone, Scorpion, Hornet, Trojan, Lacust and Windwalker.

YOU OVERCAME THE GODS? THESE HANDSOME SPECIMENS WILL BRING YOU DOWN TO EARTH!

In Populous, you challenged the gods. Now man is your adversary in the form of three unscrupulous and violent tribal leaders.

BULLFROG
FROG

Arranged Atom ST
available Oct. '90
IBM/PC from 1991

£29.99

Be as mean as them and match force with force, or be more cunning, play Mr Nice Guy and win over the local villagers.

By doing so you not only swell your numbers, but also keep your larders stocked, which is essential in ensuring the loyalty of your army.

With the stunning graphics you've come to expect from Bullfrog, Powermonger is a living world of mountains, forests and rivers, sun, snows and rain, where inventiveness and strategic skill can triumph over mere brute force.

Powermonger will test you to the limit, but if you still have any energy for adventure left, these other great Bullfrog titles still lie in wait.

The custom-made world editor is one of DID's most powerful game creation tools. "We can build a world in 30 minutes," says Martin Kenwright. "The world editor loads in all the 3D shapes, ranging from runways to rag guns. It allows us to create complete game landscapes viewed from any angle. We can have massive staircases with vehicles like tanks and spaceships all doing their own thing. Creating a 3D world is now simplicity itself." Together, these four editors account for 100% of source code. This month-end shows the fighters and buildings from Ranc, using this release, we have from Retaliator. Note the large size of the radar-like gun dish, DID are designing graphics complete and craft for use in Epic. All these objects will be in scale when you play the game! The last canvas is part of the defense network which protects your home solar system of your enemy.

LET'S GET

"Remarkably RETALIATOR 2 will be more interactive," says Phil Alsopp. The successor will feature the new F-29B carrier-based fighter, the 360° turnable aircraft, the AH-64 Apache and HIND-D helicopter gunships, A-10 Thunderbolt, SU-26 Soviet jet, and all the original aircraft from the first game.

POLYGON POWER

DID has been working on some revolutionary 3D graphics routines and editors since completing F-29 Retaliator. The new ultrafast graphics engine forms the core of Epic and Retaliator 2 - with polygon discs, cones, spheres, true ellipses, standard shapes (lines, triangles, squares and rectangles), thousands of objects (up to 256x16 3D movements, rotations and turns), 13 scales of grey, a see-through hash palette with a maximum of 64 colours made out of 16, and different ranges of density for clouds, force-fields, etc.

"We produced the flight sim of the year within a year," states Martin Kenwright of Digital Image Design - the software development team responsible for Ocean's highly

successful F-29 Retaliator flight simulation.

Started in March 1989, Runcorn-based DID consists of eight people: Martin Kenwright (Director, Designer), Phil Alsopp (Director, Amiga/ST Programmer), Russ Payne (Director, Amiga/ST Programmer), Andy Torkington (Amiga/ST Programmer), Paul Holywood (3D Programmer, Graphic Artist), Rob Ball (Graphic Artist), Jason Brooke (PC Programmer) and Liddon Brooke (Graphic Artist). Before DID, these guys worked on Falcon and Flight of the Intruder for Microsoft.

The ACE-Rated F-29 Retaliator caught the imagination of both flight-sim fanatics and gamers who hadn't even thought of buying this type of game before. So how will DID top the success of its first release?

Digital Image Design, the team behind F-29 Retaliator, is currently developing EPIC and RETALIATOR 2. Rik Haynes reports from Runcorn...

DIGITAL FUTURES

DID is looking to tomorrow. It is already developing state-of-the-art software technologies for use in Compact Disc systems. "CD games will take longer to develop - around 12 years per project. We will have more people in our development team, with twice as many graphic artists than programmers. The whole design of a CD game is story-boarded similar to a movie because of the massive structure of the program. In effect, CD games will become interactive movies. In five years, there will be increased liaison between film companies and studios, musicians and software developers. Imagine a computer game with a movie licence tie-in, using original or specially adapted movie footage," predicts Martin Kenwright. "Placacy will become almost non-existent, and software will appeal to a far wider scope of people. With no keyboard required, even Granny will have a go! Unfortunately, programmers and artists will get carried away with this mass of memory and forget about gameplay."

Are you interested in the future of games technology? DID is looking for talented programmers, artists and musicians. Just fax Martin Kenwright on 0928 579975.

◀ DID is trying to emulate an arcade game with EPIC, each game should last 30 minutes

"Single a Wingleader (see ACT 25) is the closest thing we've seen to our system," says Martin Kerneright

◀ An aircraft carrier in the middle of a fight, what a going on? RETALIATOR 2 emulates two American carriers: Roosevelt and JFK Kennedy. It also has Russian Delta Class submarines and the US-Ohio sub fitted with Trident II missiles.

◀ A swift close-up in EPIC. Your ship is armed with a 50000 Megaton orbit, salted device, ion beam heavy assault gun, photon beam and laser cannon.

"We can build a world in 30 minutes."

Martin Kerneright

◀ EPIC was originally going to be called Retaliator 3D - until a Microsoft decided to pull out of the game. The industry DID bought the game, but, sold it to Ocean, and renamed it Epic.

Some planet data for your EPIC spacecraft cockpit. Each planet with have its own atmospheric conditions (like heavy storms and strong gravity pull).

DIGITAL

Many of the spacecraft from EPIC have been "inspired" by sci-fi movies, including the Viper fighter from *Battlestar Galactica*. Remember Star Wars and Apollo used to fly this baby! Epic also has Cylon fighters, the Battlestar itself and a Wing fighters from Star Wars. These spacecraft will be revealed in the final version to avoid any copyright problems.

These DID are Martin Kerneright (left), Phil Allsopp and Andy Berkington. Kerneright was recently pulled over for doing 145mph.

In his 15 years he responded by purchasing a dashboard radar-detector - one wonder when he'll be Beyond Visual Range instead!

Flying your EPIC spacecraft with the carrier ship. DID is trying to include a manual landing facility.

"The bugs in the first version of Retaliator were annoying, but people wanted it in any state."

Martin Kerneright

This 17 frames per second agriculture ship from EPIC has 16 polygons, including eight discs. You have to defend these "aggr" ships during the game. In real life they would be two miles long.

RETALIATOR RETURNS

"Retaliator 2 is a totally new concept with faster 3D graphics routines. It's going to be better in every way than F-28," says Martin Kerneright. "You control a kick ass squadron of US superfighters, ready to be assigned to any hotspot around the world. The polygon graphics generators have been completely overhauled and now include ellipses and improved clipping. The level editor allows us to create complex scenarios with primary and secondary missions. We also want to incorporate a head-to-head option. Retaliator 2 has taken a back seat to Epic, but should be finished in the first quarter of 1991."

NOW SHOWING ON

ACCESS
Software Incorporated

Get Shreddy!

...for something Turtle different!

Spectrum version. Heading along the upper platform of one of the warehouses.

Overhead view of the sewers. Access to the underground sewers is via the manholes.

Platform/ladder action in a sewer-boss battle. Some turtles cope better than others with split level combat.

The story of how four baby turtles were accidentally washed into the New York sewer system, mutated (by a substance called MutaGen) into something other than your everyday amphibian and trained to become Ninja Warriors by a giant rat named Splinter is already a legend.

Whether you're obsessed with cash (see panel), violence (the UK authorities insisted on calling the little ninjas 'heroes'), healthfood (they set a terrible example, existing almost entirely on pizza), or Renaissance art (Splinter named them after his favourite Renaissance Artists), you'll find a sympathetic (or unsympathetic) chord struck by the Turtles, whose real attraction seems to be their ability to be all things to all people under the age of 16. Goodman and

Laird, the American duo responsible for unleashing Turtlemania upon the World, could never have dreamed of the success that such unlikely characters would bring.

Placed in the sweetie palms of the marketing media,

PROBE

All you have to do to be one of 10 fantastically lucky winners is to identify 2 products from the Imageworks stable, printed somewhere absolutely inconspicuous on these two pages.

Write your answer on the back of the postcard mounted on the cover (see HELP! box if it was missing) and get it in the post as quickly as possible! The closing date is Friday 31st October, so don't delay!

THE PRIZES

The winners of the first ten correct answers will each win themselves £100 worth of Turtles and Imageworks products. Free software, T-shirts, and other gifts could soon be piling through your door - get your entry in now!

"Ooohunga!"

Leonardo

Turtle troopers in the Amiga version, adding decent 16-bit presentation to the basic storyline

and possibly encouraged by the massive success of Nintendo's Mario Bros: Raphael, Donatello, Michelangelo and Leonardo (in addition to a host of other involved characters) have spawned literally hundreds of spin-offs, from cereals to video games. This ball may stop rolling one day, but not until it's made the fortunes of a very large number of people.

THE GAME

Licensed to Mirrosoft, published by Imageworks, and programmed by Probe Software, Teenage Mutant Hero (forget that raunchy Ninja word) Turtles is due for a November release, alongside the national cinema premier.

Although they're keeping things close to their chest, Mirrosoft intend to improve upon the original graphic/arcade adventure licensed from Ultra/Konami and first seen on the Nintendo (and first reviewed, in the UK, here in ACE). It seems pretty certain, however, that there are going to be some similarities (Confidential, Probe assure us) between the original version and the UK one. Which isn't necessarily too bad because, as licenses go, this one had a goodly dose of game-play, featuring primitive RPG elements that allowed you to switch control between the four mutant misadventurers in different situations.

Each turtle displays an aptitude for certain skills - welding swords, throwing death stars, stabbing lances, and swinging sticks - in their multi-level search for gorgeous girl April, making cadavers of numerous baddies along the way.

So far both 8-bit and 16-bit versions are looking pretty good, with the 8-bit versions showing some particularly impressive graphics. Already well known for their excellent original product, Xenon 2 and Cadaver for example, Imageworks look as if they may have a sexier little number here than one might expect. How the final product plays obviously remains to be seen, but with the current buzz, TMNT looks set to be the obvious Christmas number one.

One of the actual test Imageworks: when given what game this comes from and enter the name in the answer to question number one on your card

Another Imageworks product! Given what game this comes from and enter the title in the answer to question number two on your card

SHREDDY CASE

Although at yet unreleased in the UK, the movie alone is currently the largest grossing film in the Variety Magazine box office report (step 50). Taking \$132,180,545 during its current run, that works out at a staggering figure of just under one million dollars per day!

COMPETITION RULES

1. The closing date for the competition will be Friday the 5th of October.
2. Multiple entries ARE permitted, but photocopied entry forms will NOT be accepted.
3. The competition is NOT open to anyone associated with either Mirrosoft or Imag Images.

HELP

If your entry cardform was missing from the front of this month's issue, you can send us an entry on a postal card. Put your answers to the two questions, your name and address, plus your 1 short size (S.M.I.), your age and the machine you own. Post the entry to ACE Turtles Competition, Priority Card, 30-32 Farmingdale Lane, London, EC1R 3AU.

Note that the cardform also included a £1 discount voucher from Imageworks for entry to the Computer Entertainment Show (15th/16th September). If it was missing, you can use the one printed BELOW - but please note that you can only use ONE voucher per person.

TANK PLATOON

Available for IBM PC Compatibles and coming soon for
Atari ST and Commodore Amiga

MICRO PROSE
THE LEARNING COMPANY

Four M1 Abrams Tanks. Four soldiers in each. That's Four Tanks, Sixteen Men. And you control the whole shooting match.

M1 TANK PLATOON

• **Leadership.** Each of the 16 men in your tank platoon has his own battlefield skills and abilities. Improving with experience, promotion and decorations, your chances of success increase as your platoon becomes battle hardened.

• **Strategic and tactical command.** Plan your winning strategies, giving orders to your platoon of tanks, calling in airstrikes and artillery. At any moment you can 'jump' into the thick of the action, taking over direct control as commander, gunner or driver of any tank.

• **Realistic Battlefield terrain.** Make use of natural cover, such as hills, ridges and buildings to hide your tanks, across the huge 16,000 acre 3-D battle zone, just like a real tank commander.

• **Endless variety.** Fight during the day, at night, in snow, mud, rain or clear weather. With thousands of battlefields and millions of situations and you get endless enjoyment. Decide between single battles or an entire campaign.

IBM SCREEN SHOTS SHOWN. ACTUAL SHOTS MAY VARY

• **High-tech war.** Laser rangefinders, depleted uranium penetrators, wire-guided missiles, reactive armour, air support and artillery make M1 Tank Platoon the most comprehensive, up-to-date simulation of armoured land warfare available for your home computer.

M1 Tank Platoon was released for IBM PC compatible machines in October 1989.

"MicroProse has surely excelled on this one, it's all there, from superb playability through great attention to detail to one of the best manuals I've seen in a long time. The competition should watch out, as this one's going to take some beating." — PC Leisure Spring '90

"I can't really fault M1 Tank Platoon as it's definitely MicroProse's most comprehensive simulation yet." — 87% C&VG Nov '89

"The most breathtakingly accurate tank sim we've seen." — 92% Ace Dec '89

HE'S BACK... TO PROTECT THE INNOCENT

ROBOCOP 2™

EVEN IN THE FUTURE OF LAW ENFORCEMENT, THERE'S ALWAYS ROOM FOR IMPROVEMENT

The future is a rough place; Detroit is a bankrupt city... torn apart by the decadent forces of the Old Man and his corrupt corporation. If you want to die then walk the streets, if you want to live - then pray for the return of RoboCop! **ROBOCOP 2** has justice in mind... a kind of justice only he can deliver! Take on Detroit's evil mastermind and his mega-corporation in some of the most action-packed scenes ever devised for maximum entertainment value. DETROIT IS FALLING APART - IT'S TIME TO PUT IT ALL BACK TOGETHER!

AMSTRAD • SPECTRUM • COMMODORE
ATARI ST • CBM AMIGA

ocean

A grandfather and grandson are chatting about the 'Good Old Days'. Grandfather is, as usual, doing most of the talking.

"The year 1990? Of course I remember it, my boy. That was the year of the... um... er... just let me check the diary. (Speaks to diary) 'Diary, list major events of 1990'. Ah, here we go, just searching its memory banks. Get a new diary? But why? It's too big? No thank you, I'm perfectly happy with the credit card size and besides, I'm too old for all this subconscious implant, direct cerebral input business. (Diary begins to display the requested information.) Right, it says here: 'Mike Tyson defeated, Nelson Mandela released, Iraqi Gulf Crisis resolved by Pygmies and... oh yes... the first Computer Entertainment Show.'"

"What? Yes, that's right, the first Well, all oaks grow from small acorns, you know. Hard to believe the biggest interplanetary entertainment software show was once confined to one small four dimensional building in Earls Court. Oh, it's all flooding back now - the lights, the glamour, the heat, the stars. Dame Betty Boo was there, you know, though she was a mere slip of a girl then.

THE GAMES...THE GLORY

'Games were a lot different then, too. They took place on crude 2D bitmapped videoscreens with only about 16 or 32 colours used at once - a far cry from the four-wall high-definition holoscreens you've got in your gameroom. What sort of games? Oh, shoot 'em-ups, platform games, graphic adventures (come on, you remember, I showed them to you in the Museum of Leisure on M4s and you said they were 'quaint'). Nearest you got to the sort of games we get today were films, but they weren't interactive and the outcome was fixed. Yeah, similar to story replays, but without the emotion centre stimulators.

"The amount of involvement possible in these games was limited by the method of interaction. In those days they only had a joystick, a mouse or a keyboard, nothing like the neural link and body sensors in your gameroom. And the only feedback you got was via your eyes and ears, no electrically-induced nerve manipulation. Oh no, if your space-slap crashed then all you got was a flash and a bang, none of that ghastly Syntho-pain® you get nowadays.

"What? Interact with artificial personality constructs? Of course you couldn't! Computers had nowhere near the speed or memory storage for that sort of realism. No, back then the first CD-I machines were only just starting to appear. They were slow, and the very first machines had problems with pulling data from storage onto screen, so the games, albeit of greater depth, tended to consist of still frames with music, rather than the full motion video you get today. And the interaction was still primitive, although developers were researching into movement sensors, control gloves and speech recognition.

THE MARCH OF PROGRESS

"As I remember, things really started buzzing in the '90s. And I guess it all started at that first CES show. Take interactive CD, for example, shown in the...what was it? Oh yes, the Living Room of the Future exhibit done by ACE magazine (stiff around you know, they've just bought up MaxMurd Inc). Eventually those CD things achieved the speed for full motion video while manipulating sound and game data, and things really began to take off. With high-definition TV becoming popular, gamers began to experience the full realism potential of

those game systems. Oh I can remember the adrenalin rush even now - we'd never seen anything like them, a total audio/visual experience. They blew away everything that had gone before. Game production became more like film production, with script writers, researchers, directors, and so on.

The following years, just after you were born, saw the advent of... Oh but sorry, I'm beginning to sound like you learning centre. You'll have to stop me if I start to lecture. You know all about the rest, of course, because you use it every day. So, where did we start? Ah yes, the Computer Entertainment Show! You know, I was a sceptical little tyke then. I remember walking around that ACE Living Room of the Future and thinking that none of what was on show could ever really take off. How wrong I was!

"These self-developing ultra-violet prints are great stuff."

Back Hoppers start forecasting the development of the Future (eventually produced 1878 in 1929)

The future-LIVE!

Oi!

Turny 62 with the admission price to the Computer Entertainment Show? Of course you do! Simply present the card from the front of this issue at the door. Oh yes! Card gone missing? Then turn to pages 26 and 27 and use the cut-out coupon there. And who do you have to thank for this offer? Who those lovely people at Imageworks - thanks, guys and gals!

Yes, I know there will be a second, but this is the first: CES 1991 is due to open in another forty years...

Futures present

All our tomorrows today at CES. Here's a quick roundup of futureshox that could gladden your eyes at the Show on the 15th and 16th of September...plus a fond look back at futures past...

- The US Gold stand will be hosting the International

Live for speed...Objectiv's Lotus Esprit races into action at CES

LIVE THAT ROOM!

ACE's exhibit at the CES gives you the chance to see demonstrations of some of the hottest new developments from major companies in Britain and the World. Information panels on the walls of the Living Room of the Future will explain how the technology on show will apply to YOU in years to come, and there'll be actual demonstrations and models featuring tomorrow's technology. The Room will concentrate on the following five main topics:

- **Interactive CD** - It's something ACE has been championing for a long time now, and you may be wondering what all the fuss is about. Come along and understand why we're excited about it and why you should be too!
- **Communications** - Could we ever have Guinness Master played over the 'phone line, with interaction between players? Find out about the exciting possibilities of high-band width telephones and other aspects of the communications revolution.
- **Cyberspace** - You've read the books, now experience the reality. Learn how the man-machine interface will be revolutionised with the advent of biofeedback and speech recognition and the truth about alternate realities.
- **Interactive TV** - Ever been frustrated by your inability to participate in a TV debate? Soon you may be able to and, combined with high-definition TV, you'll feel like you're actually in the studio with the guests!

- **Home workstations** - Imagine a future where you'll never have to leave home to go to work. Discover how your car will be able to tell you how to get from A to B, use avoid any nasty roadworks. And you'll be able to get your face on the telly at ACE! Find out more on the day - and don't miss it whatever you do.

Plans for the Living Room of the future stand at the Show. Enter the Future and be amazed!

Games Championship, where crack gameplayers from Japan, France, Germany, Italy and the UK will pit their skills against other in the ultimate test. Forget the disappointment of the World Cup - this is what our national pride is riding on (and we've got more chance of winning)!

- Gremlin will be running the Lotus Esprit Turbo Challenge to promote their new game of the same name. The action will take place on a huge video wall and contestants will sit in purpose-built Lotus seats. Ancolans can eagle a real Lotus Esprit on display, as well as a Suzuki racing bike to promote the new Team Suzuki game.
- Derek Bell, the motor-racing marvel, will be applying his track-honed driving skills to a wide range of computer racing simulations.
- Those who feel like testing their gamaplaying mettle should make their way to the Virgin Mastertronic stand where, for a small fee that will be given to the Childline charity, you can play a head-to-head with the winner of last year's Sega Challenge.
- Fans of Breakside and EastEnders will have the opportunity to see which programme employs the best gamblers as members of the casts compete in a computer challenge.
- There will be the chance to have your photo taken with one of the galaxy el stars visiting the show.
- Turtles fans will no doubt be queuing around the ACE stand in their millions, because the beshelled foursome, courtesy of Mirrorsoft, will be there IN PERSON (espr to personally sign copies of the magazine (Careful with that nunchaku, madam)!
- There'll be a Karaoke (the Japanese sing-along backing tape) competition, with a special video introduction from pop 'sensations' Wal Wet Wet. All proceeds will again be going to Childline.
- You've read about it, now experience the reality. Take Microprose's F 15 Strike Eagle arcade light sim for a spin, it'll be on freeplay all day all than stand.
- All through the weekend there'll be a variety of musical acts. Kiss FM, one of London's newest radio station, will be presenting some scratch DJs who will amaze you with their turntable prowess and Jazz Anuga, sponsored by Commodore, will be having jamming sessions.
- Of course, there will be a host of new hardware and software products on display. The ACE tips for the big hits of the show in these two departments? The official UK release of the Sega Megadive from Virgin Mastertronic and the remarkable Powermonger from Electronic Arts.

The Power Glove! Just one example of the developments in man-machine interfaces that you can find out more about in the Living Room of the Future...

YOU DIDN'T MISS IT BECAUSE IT WASN'T THERE!

Here are a few of the things that you WON'T be seeing at this year's Computer Entertainment Show:

- Commodore CD-TV - This could be the product to start the CD-i revolution, but not if we never see one! Commodore are holding it back for the trade Show!
- Dancesies - Novagex's follow up to Marc' space, sorry, this is actually out now!
- The rumoured ZX51 console, with its powerful monochrome display and state-of-the-art BEEP chip will most apparently stay just that - a rumour. Yet another missed chance for the sweet UK console business.

... more about friends appears

...and futures past!

Science Fiction has been trying to put people into the Living Room of the Future for decades, but it's surprising how few books or films actually portray a radically different yet believable and practical future.

The typical manner in which the future is depicted is to take contemporary characters and locations then 'bolt on' futuristic devices, which give the stories a veneer of propheticism yet present the reader with situations that are easily recognisable from real life.

This trend started way back in the last century with Jules Verne (i.e. the Nautilus in Twenty Thousand Leagues under the Sea.) The novels of the Golden Age of Science Fiction in the 30s and 40s were rife with this phenomenon - no matter how many ray-guns, giant spaceships, aliens

and robots were crammed in a story, the situations were still recognizable (and generally interchangeable with *Cowboy* stories).

When people did make the effort to think seriously about the future, the results tended to be bleak. Good examples of these pessimistic visions are Fritz Lang's classic 1926 film *Metropolis* — in which people, rather than being liberated by technology, became its slaves, toiling all day in mindless labour simply to keep a huge city running — and George Orwell's novel *1984* (1948), which portrayed a dystopia where every living room is fitted with a huge TV screen that couldn't be turned off and which is used by the latest State to spout propaganda and spy on the populace.

FUTURE PARANOIA

In the 50s and early 60s the development of the atomic bomb and fear of Communism led to a growth in paranoid fantasies populated by overgrown natural fauna or bug-eyed monsters. Mankind, it seemed, was too busy fighting for its very survival to worry about the future.

At this point, special mention should be made of the author Ray Bradbury, who had several interesting ideas of how the media would impact on our lives long before even *TV* was fully established. In *Fahrenheit 451* (1951), the protagonist's wife spends all day in a room made of four giant TV screens, soaking in mind-numbing soap operas pumped out by the State to keep the population docile.

Even more interesting was the short story *The Veldt*, collected in the anthology *The Illustrated Man*, which proposed a children's playroom that simulated any environment, such as a medieval castle or, as the title suggests,

...AND MORE ABSENT FRIENDS...

● The PC Engine — shelved by NEC until the second quarter of 1993 — and at that rate we may never see it.

● Remmel, Gamelin's 3D laser-metric arcade game, was previewed in ACE issue ONE! It's still officially 'in production'!

an African veldt), in a similar way to which experts think current multi-media devices could develop, this simulation could be walked around and interacted with totally, just like reality. In fact, it was so real that, in a technophobic twist typical of the times, the simulated lions of the veldt killed people!

Following the Vietnam War, the dystopia theme was explored again in films such as *THX 1138* (directed by George 'Star Wars' Lucas), *Alphaville* and *Logan's Run*, amongst many others. A more optimistic view was given by Stanley Kubrick's 1968 film *2001 — A Space Odyssey*. Those films are typical of the futures popular around the late 60s and 70s, where people wander around white antiseptic, plastic rooms wearing awful one-piece suits.

So many of these visions of the future are way off the mark, generally underestimating the current technological rat-race. For example, in the 30s, 40s and 50s, many writers didn't think that there'd be a man on the moon until the next century, yet the combination of World War II and the Cold War encouraged rapid research and human feet touched lunar soil in 1969. Likewise, no-one foresaw the incredible information and communication explosion produced by the development of the silicon chip.

The ramifications of this boom have still to penetrate the majority of SF. In particular, the films still stick to the old scenarios/new technology formula. Even *Blade Runner* (1982), which is widely regarded as a realistic view of the future, hardly acknowledges the impact that computer technology will have on us all. O.K., that's a two-way TV phone and a hologram viewer, but these ideas are not exactly new. In essence, the film is a 40s detective drama with flying cars.

More recently, *Total Recall* (1990) had the neat idea of artificial memory implants, and Schwarzenegger's living room had wall-size TV and a clever holographic tennis tutor, but it's still a future we can all recognise from now.

CYBERPUNK

The most interesting and plausible ideas of how things may go are provided by such authors as William Gibson and Bruce Sterling, leaders of the Cyberpunk movement. In the Cyberpunk future, the concepts of artificial realities and personalities, computer/human neural links, and societies where information is more important than money, are explored in depth.

But who's to say that those views, which currently seem quite probable, won't look as quaint and dated as those that went before. There may be a revolution in technology just around the corner that no-one can foresee, but you can be sure of one thing — if there is and it affects you, you'll read about it first in ACE!

GIMME IMME

How far are we from the *Cyberspace dream*? Not far, if Nolan Bushnell is to be believed (he reported exclusively in ACE 33) — he's already working on a consumer virtual reality product. One of the biggest problems to overcome will be that of human/computer interfacing. It's all very well having cinema quality visuals and CD sound, but how can you become totally engrossed if you're still having to click on a mouse with the mouse pointer or twist a joystick about? The machine's limitations are still getting in the way of the experience.

This could all change in the near future. Research and development companies across the World are already producing prototype speech recognition units, although early primitive ones will improve. More immediately, remote control methods have already been seen, such as the *Mattel Power Glove* and *Broderbund's U Force* (both reported way back in ACE 23). When worn these gloves can be used to control on-screen events by simple movement of the arm.

The potential for these devices is already huge: you could actually press buttons or open doors in a game without being anywhere near the computer or the TV. If this could be combined with some sort of tactile feedback, so that you could actually feel the door handle as you turned it, the first true steps to virtual reality would be here. However, such a device would be highly complex, and it's not going to be around for quite a while.

abilities in the IMME (Interactive Multi-Media Engine — reported in ACE 31).

Basically consisting of a room lined with motion sensors, visual and audio events on four video screens are triggered by the movement of anybody in the room. Although currently just a collage of various images and sounds the possibilities are incredible. Combine it with some sort of treadmill and you could walk around an artificial environment, interacting with it. Add sensor gloves with feedback and advanced speech recognition and the fantasy of *Cyberspace* would become a reality.

Interested in experiencing the birth of *Cyberspace*? Why isn't? ACE will have the IMME in the 'Living Room of the Future' and you will be able to sample its delights. Believe us, it's an experience you shouldn't miss!

An illustration of the kind of images thrown out by the incredibly subtle system, which is sure to be one of the big crowd-pullers at the show.

DANCE THAT VIDEO

Another device with *Cyberspace* potential.

Power

...to our people!

Next month's ACE pulls no punches as we give our readers the ultimate games experience. Knowledge is power, friends, and with issue 38 you'll be putting on gaming muscle like there's no tomorrow...But there is, and here it comes...

First we'll be taking you from 1990 CES through to the year 2000 with the plans and future products of some of the world's biggest software companies. If you want to find out what you'll be playing in 2000AD, this is where you'll find out.

But that's not all. We're also bringing you:

- the low-down on MINOWARE - a new development featuring hardware and software for the BRAIN. Mark Healey will be bringing you the low down on a series of technological developments that are leading to the construction of unique Mind Gymsnasiums in London. Find out all about in issue 38.

- on-the-spot report from Millennium, featuring interviews with the programmers and designers of Resolution 101 and Archangelos. To name but two. Plus the chance to find out about their latest projects - a futuristic sports game that combines competition with Resolution 101 graphics handling and a very weird sounding title that has you taking on the spirit of a North American Indian.

- The Chris Crawford Story. The programmer of Eastern Front, Balance of Power, Balance of the Planet and Guns and Butter has had an enormous influence on gaming styles and coding. John Cook delivers the definitive ACE analysis of a major figure in games development.

- On the spot reports from the States and Japan, including

news from the CyberArts International conference in Los Angeles. You'll be able to find out about emergent interactive and multimedia technologies and their applications in the entertainment world, including holography, laser interactivity, and algorithmic art.

- Wingleader - a major exclusive review of the game that we previewed in issue 35. Recently renamed Wing Commander, it promises an incredible combination of 3D graphics and arcade game-play. We've seen these routines in action for ourselves in the US and believe us, they're something else again.

- All the early autumn releases including Rick Dangerous 2 and Power Ranger. This month is going to be BIG.

- The biggest competition we've EVER mounted. We're not giving anything away except to say that for the first time EVERY reader will WIN! If you want to take part in the largest software prize bonanza of all time, reserve your copy now!

"Curly, if you want to be man, you've got to read this magazine."

(John Wayne (no relation))

Wingleader - new Wing Commander - looking mean in the ACE preview - and we mean to give it to you on the page next month.

DEAR NEWSAGENT,

As a sophisticated user of highly complex electronic equipment for entertainment purposes, I want the chance to partake in ACE's largest competition ever. Please reserve for me a copy of the November issue of ACE magazine (Advanced Computer Entertainment), due out on Thursday October 4th. I shall be everlastingly grateful (and possibly rich).

My name.....

My address.....

KONAMI

THE ACE PROMISE

1. ACE IS DIFFERENT

Unlike many magazines, ACE ONLY reviews finished games. If it's reviewed here, it's what you'll get in the shops. If there's any exception to this rule, the page will clearly be marked **PREVIEW** and the game is not rated. We won't let you down by reviewing half-finished versions and demos. And to give you even better coverage, this month we've introduced the ACE Preplay feature. See opposite for full details.

2. ACE IS DEFINITIVE

Every game has been extensively tested. If we come across bugs or other difficulties, we check immediately with the company concerned. Then we give you the whole story. Whenever possible, we'll give you more than just the review - analysis, comparison, and technical information is all included wherever possible.

3. ACE IS DEPENDABLE

All ratings are carefully calculated. You can rely on them to make your buying decisions. Not only do we limit our reviewing finished versions (see above), but we also make sure that all ratings are checked by the ACE reviewing staff. We GRRR these games!

The packaging and presentation are excellent, but after a few minutes the depth of gameplay really starts to show. Unfortunately a repetitive campaign means it's down to zero from there.

PIC POWER!

The PIC - Predicted Interest Curve - is the most sophisticated reviewing tool around.

We at ACE know you don't just play a game - you experience it. The Predicted Interest Curve is the only review system that takes this all-important factor into account.

The curve is divided into six sections, indicating the player's attention level after one minute, one hour, one day, one week, one month, and one year. And this can tell you a lot more about a game than just the interest level.

For example, a high one minute rating means that the game must look fantastic and get you all excited from the word go. That means it's probably a good game to show off to the neighbours - who probably aren't going to pay attention for much more than a minute anyway.

The minute, hour and day ratings can tell you a lot too. If there's a dip here, followed by a rise, you've got a game that may take a bit of getting into. Alternatively, the graphics may put you off for a while until the gameplay starts to grip. Check out the PIC comment for more details.

Finally, you've got the month and year ratings. The better a game holds up here the more deserving it is of your hard earned cash.

SCREEN

Welcome to the ULTIMATE GAMES GUIDE

This month's section is even bigger and better than ever.

● Bigger, because we've brought you more games, ranging from the superlative *Powermancer* to the ludicrous *Monty Python*.

● Better, because in our never-ending search for the perfect reviews section, this month we've introduced two new improvements: the ACE Preplay feature now keeps you right up to date with the latest product - see the page opposite for full details. And we've redesigned the ratings boxes to save space - space we use to tell you even more about the game.

And don't forget - ACE is the only magazine with regular review sections for computers, consoles, and CDs, giving you complete coverage of games today - and tomorrow.

ACE RATED!

Question: Is this game really going to grab me? And for how long?

Answer: the PIC curve - the heart of the ACE Rating System.

Each review carries a PIC Curve (see the Power game) and special 'Version Boxes' that give you details of the game's implementation on a specific machine. These boxes include a string out of ten for

GRAPHICS

All aspects of the game's graphics - with the time taken of each machine taken into account.

AUDIO

The music and sound effects are rated here. A high rating is possible on even limited machines like the Spectrum and PC. If the computer's shortcomings are clearly indicated.

IQ FACTOR

The Ben Spurr rating. Note that ACE readers are generally reckoned to be more intelligent than other human beings, so the ratings may be lower than you expect.

FUN FACTOR

Barely a measure of mindless idleness. Games like *Askaned* and *Flying Shark* require virtually zero brain power but are still remarkably addictive. Most top-top score well here because they are designed for instant satisfaction. Games don't have to be either fun or intelligent - they can be both.

ACE RATING

To get a really high rating a game will not only have to be very addictive but stand the test of time as well. Here a general guide to what the ratings mean.

900+ A classic game recommended without reservation.

800-999 A superb game, but perhaps lacking the long term depth to last into the month and year categories.

700-799 Still recommended, but probably has a couple of aspects to the gameplay that take the edge off it.

600-699 The 'fair zone', where it tends to be OK. If you like that sort of thing.

500-599 Not recommended. The game clearly has some noticeable problems.

400-499 Problems with gameplay and programming make this an inferior product.

300-399 Just only is the gameplay bad but the design is also seriously flawed. Very avoidable.

200-299 Things are getting really heavy now. Might be funny if you weren't expected to pay for it.

100-199 Inferior ZX81 games running on an Amiga.

Under 100 An essential purchase due to rarity value and unparalleled degrees of awfulness.

VERSION BOXES

This covers version-specific information on graphics, audio, loading problems etc. If there's no box for your machine but a version is planned, it'll be covered in an update in a later issue.

N TEST

ABSENT FRIENDS...

Not every game makes it into ScreenTest each month. Naturally we have to pick and choose making sure that we bring you the widest possible selection. Sometimes this causes us a good deal of grief, particularly when we feel that for reasons of space we have to leave out a game that deserves more exposure. Usually — as in the case of *UIMS2* below — this is because we have given the program an extensive pre-production playtest in a recent issue, and the final version differs so slightly from the previous one that there's nothing more to add except the final seal of approval (or disapproval) in the form of an ACE rating. And sometimes we leave them out because we just can't bear to put them in!

UIMS II — reviewed in issue 35 — is every bit as good as we hoped it would be. A result for everyone's enjoyment, the new version has seriously got functionality before appearance. For example, you no longer get those state-of-the-art 3D views of the battlefield (which were actually a bit of a drag and slowed your view). But now at £38.95 for 16-bits and ACE rated at 95%.

BACK TO THE FUTURE II — Let's hope the next BTG game happens on the production. BTG has a lot of a disappointment. Frankly, we felt that we could make better use of space this month by telling you about something we'll be reviewing later than by continuing the fallings of this little number. Apart from its setting in the distant past, the limited gameplay mechanics, a very poor points system, and a character that are up to the neck in

ACE AWARDS

ACE always awards seals of approval for outstanding software performance. If a game really beats the bandwagon in sound, graphics, or originality you'll see the appropriate ACE Award flash on the review. Unless it's truly dire — in which case it'll get the ACE Turkey Award. Software titles that you have been awarded:

ACE only awards this one to games of outstanding quality. A 99% game is a classic title, recommended without hesitation.

Originality counts for a lot these days, and any games that have it deserve a special mention. This ACE award is reserved specifically for these rare gems.

One of the first things to grab you in a game is its graphics. Games that redefine the state-of-the-art get this seal of approval from ACE.

Sounds is the 'forgotten' aspect of games — but not make or break them. ACE only awards this one to brilliant use of audio in a game.

INTRODUCING... ACE PREPLAY

You now have a way of seeing how we feel about reviewing unfinished games. Unlike some other magazines, we won't rate a game unless we're 100% convinced that it represents what you'll find on the shelves. In the past this has meant that we've been able to keep you better informed than our competitors — we were the only magazine, for example, that mentioned the dreaded 'bug' in our review of *F23 Retaliator*.

Up until now, games that haven't been finished have been covered by us as Previews — either as features (see the Digital Image Design feature on *Retaliator II* in this issue, for exam-

ple) or as previews within ScreenTest itself (indicated by the word Preview at the top of the page). We've now taken the Preview idea one step further and introduced ACE Preplays — games that aren't finished but are sufficiently playable for us to form opinions as to what could be done to improve them and where they show real promise.

To do this, we've introduced the ACE Preplay verdict panel. You'll find a couple of these in this month's ScreenTest. In each case, they accompany a game which we feel deserves more than just a description of the scenario. And, of course, we'll make sure that the programming teams hear what goes into the panel, so that they can (if they agree) make some modifications to the game.

That's just one bag in the lettuce! The panel design wasn't ready until quite late in the schedule for this month's issue, so you'll find that some Preplay titles still have

'Preview' at the top of the page. From next month, however, Preplay will be a fully integrated and permanent feature of the ScreenTest scene...

POWERMONGER SCREEN KEY

- 1 Press player in data
screen to activate political
landscape and private
maps.
- 2 The map currently selected
level (see in this case,
Troll). The landscape is clearly
seen, with your own chosen
as white pie in the white
area. The area in the
area in the area screen,
and can be moved all over
the map with king in mouse
click. Moving you to long
in eye in moving mouse
moves. It's the sort of ability
you can see in the
screen by right and left.
- 3 Messages window
- 4 The command. The large
arrow shows points north,
and what you can do
points north will move you
in a direction relative to
this.
- 5 Click on these icons to
rotate the landscape in
either direction.
- 6 There's some places you
can go to (or out on the map
in this).
- 7 The location of the map!
The best about the location
screen is that it gives you
a real sense of where you
are. When a character
is recruited, they appear
up to the left and
just behind the king and
can be seen in the
screen by clicking in them.
- 8 Your window on the world.
The area can be expanded
if it's just about any map
available, thanks to the fix
of the polygone used
for movement.
- 9 The low sample items are
the map which you'll
need to get into
Powermonger.
- 10 Several games.

The Bullfrogs. (Left-right) Simon Huxley, Glenn Cooper, Sean Connors, Les Sigs, Peter McInnes, Kevin Donnelly, Andy Jolly, Gary Carr

Summers and a young warrior's thoughts turn to war. Things are looking bad for the Xanthia villagers defending their homes from your set up attack. Reuse the angels at the fallen slugs to heaven.

POWER

If you thought *Populous* was something special, wait. **ELECTRONIC ARTS** latest *Bullfrog* masterpiece a full the power 59 worlds – if everyone in Britain had creation of time, they'd be polishing off the last one

Bullfrog have long been a software development team to watch. After a relatively unimpressive start with the puzzle cum arcade shoot-'em-up *Fusion*, they really showed that they could compete with the big boys when they released *Populous*. A computer classic of our times, there can be few people who are not familiar with it. The ease of interaction, absorbing gameplay and stunning graphics evoked a real feeling of a world in macrocosm occupied by people leading independent lives and generated a level of involvement unknown with most games.

So how do you follow up a computer legend? After a fairly quiet period, the Bullfrogs released *Flood*, a platform game which, although great fun, wasn't really in the same class as *Populous*. But that may just have been the lull before the storm, if the advance preview of their next release is anything to go by.

A few weeks after you read this, Bullfrog, on the Electronic Arts label, will be releasing *Powermonger* for the Atari ST and Amiga. Although comparisons with *Populous* are bound to be made, any similarities are largely superficial.

The player controls a warrior exiled from his homeland and, along with twenty loyal soldiers,

find himself on the shores of a large island, part of a group of 200 making up the 'world'. This is a land that needs a King and who better to wear the crown than you self? Unfortunately, the residents of the islands don't appreciate your upwardly mobile ambitions, and will do all they can to stop you. Raiding towns and villages will result in the occupants either fighting to the death or being 'persuaded' to become part of your merry band. Once enough people follow your flag, they will make you King. You can then move onto the next island.

Although the early islands are relatively easy and can be won by simply attacking as many natives as quickly as possible, it is only later, when you encounter similarly ambitious opposing leaders or 'Captains' commanding troops armed with superior weaponry and your own followers are collapsing from hunger, that you begin to realise that a little more strategy is required to succeed. It is about then that you also begin to appreciate the depth of the game and the amount of thought that has gone into it.

Defeating one of the Captains puts him in your control, he can then lead an independent faction on your behalf. However, an army marches on its stomach, and these longer campaigns will require that followers are allocated to food pro-

MEGA CODE

The boys at Bullfrog have been heaving away at *Powermonger* for the last 13 months, and all that hard work certainly shows. At maximum zoom out, which is only used to get a quick overview of the surroundings, things may seem a little shaggy but when you zoom in that the system is processing an incredible 20M polygons and around 500 sprites you realise the immensity of the technical achievement.

At medium range zoom, the level at which you'll play most of the game, everything goes along - and according to Peter Aldridge of Bullfrog the final version will be even faster because they've developed a clever piece of code that intelligently allocates processor time to tasks as and when they are needed. As the age of space-saving polygons means that approx 70% of total memory is used up by game logic. It's the largest piece of code that Bullfrog have ever written.

Your army takes up camp beside a tiny village in Winter begins to like. Your leader is the tiny clouded figure standing by the campfire warming his little feet, the hero of the story.

As a counterpoint to all the violence, a shot of simple farmers tending their crops.

R MONGER

until you get your hands on this! ACE gives playtested preview...*Powermonger* can generate 4 to started working through the worlds since the just about ... now.

daction You can watch your people as they raise crops, tend cattle, herd sheep or even go fishing in the case of coastal towns. Should two nearby villages have a good year they celebrate by meeting up for a game of baseball - you can take a seat on the bleachers and cheer on your favourite side!

Alternatively you can set a village the task of inventing a new weapon, which could be anything from a bow and arrow to cannons. Naturally, the villagers need raw materials to do this so - say they need wood - they'll march off to the nearest forest and cut down trees. If they need metal ore, they'll set up a mine. You can then equip your men or trade these goods with other villages.

RIVER DEEP, MOUNTAIN HIGH

The graphics, which give an initial impression of *Populous*, are superb. The landscape is vector graphic based and allows a great deal of flexibility; it can be zoomed in or out, rotated, tilted and expanded to fill the screen to your own taste. The buildings and people are bitmapped graphics that grow or shrink but don't rotate - although this isn't noticeable during play.

This flexibility has allowed Bullfrog to reproduce a huge number of natural phenomena in the

game. Just about every geological or geographical feature is present: there are plains, deserts, hills, mountains, rivers, valleys, waterfalls and forests; it rains and the seasons change, which is reflected graphically by specks of snow appearing on the ground and the trees losing their leaves as the world turns to winter.

These features, clever as they are, are not there just for cleverness' sake. Attack a hillside town from the slopes and they'll see you coming from miles off and prepare defences, but attack from over the brow of the hill and you'll have the advantage of surprise. Make people attack in snowy weather and they'll not only eat more food, they may get lost or fed up and desert!

BIG IS BEAUTIFUL

One of the most breathtaking aspects of the game is its sheer size and scope. The game universe is huge (see box), each 'world' consists of

200 islands to be conquered, and each island is populated with 512 people with their own jobs and characters.

The Captains all have individual personalities while a bellcote one will be great for a bit of hard bargaining over trade goods, he may have no idea of how to supervise the invention of a new weapon. Strategy pervades every aspect of the game, and the player must allocate his resources and time wisely.

This may lead you to think that this will all involve remembering hundred of commands and require thousands of key presses. Not so - the game has been designed with ease-of-use as one of the main objectives and, like *Populous*, all actions are governed by just 20 icons. The computer does most of the hard work for you and lets you just get on with playing the game. The islands have been designed so that new features and strategy elements are introduced gradually, allowing the novice to build up his or her proficiency before having to tackle the harder islands.

Of course, this prettier and bigger business is all very nice, but is it as good as *Populous*? Well, the honest answer has to be no - it's far better! In the space available I can only give a brief idea of the things to see and do, and this is still just the preview version! The final version should have several extra features, most importantly the sound effects (which we are promised will be very special on the Amiga) and the ability to spy and besiege villages, and these can only add to an already very exciting piece of software. Look forward to a full in-depth ACE review in the next issue!

© David Litchurch

Never get complacent in *Powermonger* - enemy forces are always growing. Here they're creeping through how the largest feature in the South.

- Incredible, realistic, interactive world absorbs the player into the action.
- Huge and very enjoyable task with the difficulty scaled so that players can learn as they play.
- Highly flexible playfield allows a player that can be as casual as the player's wishes.

- The game won't appeal to the straight match or shoot 'em up fan with a lot of multi-attention span.
- Graphics show down at maximum zoom out, but this scale is only used rarely.
- The game has a low level of difficulty to fill the space available.

The scene waiting for a Xiphon temple - about to be blown away!

XIPHOS

Civil war has broken out in the Xiphon system and you must traverse five Universes, trading with bases along the way and maintaining good relations with both sides, in your search for a sixth, central Universe and the cause of the conflict.

Control of your ship on this vast journey is best achieved via mouse buttons

— used to advance and reverse — although the cursor keys provide an alternative. Firing uses the function keys (each of the first five emit a different weapon of successive capability). While this may seem an illogical choice, it allows the player the speed of movement necessary to react to rapidly changing situations — of which there are many.

Remaining controls allow operation of a docking beacon, map, identification reports and information. The latter two functions are incredibly useful within a game of this speed and type. Operating the ID function places a box around anything within your viewing range. In the instance of more than one object being present, repeated pressing cycles through until boxing the object of your choice. Once boxed, pressing F10 displays information on the object allowing you to decide what course of action to take.

SPACE SIMULA

The system used to generate the impressively fast 3-D graphics (known as "Simula"), took around 2 years to develop. Being a C-based graphics language, Simula allows artists with relatively little programming knowledge a free hand to design and co-ordinate complex polygon-based graphics. SPA, the development team responsible for Xiphos, are confident that future releases will make use of the system, and that its possibilities for outgrowth may offer 3-D systems as far.

This space epic — and big Christmas hope for the **ELECTRONIC ZOO** stable — bears more than a striking resemblance to *Elite*. Does it live up to its famous ancestor?

One of the many gargantuan structures to be found in Xiphos — an orbiting space station

TACTICS AND GAMEPLAY

There are no strict guidelines as to the method of play open to you. Due to the enormity of the Xiphon system (there are 120 bases in level one alone), a map may be accessed by which you can keep track of your co-ordinates. Initially blank, information must be pieced or bases visited to

register on the map. Unusually, displaying the map does not halt the action, but is superimposed over it. This often leads to your ship being unsuspiciously fired upon while routing your course.

The game allows you a free hand to roam through space, discovering various strategies, (such as involving yourself in battles, politics or mercenary activities), although it is inevitable that you will at some point dock with a base to replenish diminished resources or buy information to further your own causes. Any resources purchased rely on you shooting down ships to gain credits.

Each base you visit belongs to one of the two warring factions and entry depends very much upon your tactics. Shooting down a ship and then entering a base of the same faction can be somewhat hazardous! If the base in question acknowledges your docking beacon, you are dragged in by tractor beam (as opposed to the *Elite* docking system) when you may begin to converse. Conversation enables you to determine the nature of your location, which could be anything from a religious institution to a restaurant.

Attempting to offer a base credits belonging to the same faction or leaving without paying for services will result in your immediate rejection and attempted destruction, although it is possible to barter prices to a certain degree. Cash reserves are vital — charges are often incurred

merely for funding, and even saving a game in progress costs credits! Occasionally however, it may be that a base divulges information useful to you, or even offers you the chance to run a mercenary errand against the opposition.

POLE POSITION

Traversing between Universes involves discovery of the Pole base. Once found, you must be successfully admitted before being spewed out into the adjoining Universe. Travel is limited to one direction however. Co-ordinates leading to the Pole base may be purchased. Alternatively you may be assisted by small creatures known as Wanderers who are quite willing to lead you to the Pole and whom you must protect from possible attack.

The "Smula" system creates an excellent deep space environment with incredibly fast, well designed graphics conveying as much realism as is possible in a completely unknown environment. Although the initial concept may smack of *Elite*, the option of a practice or "Real" mode allows arcade freaks to blast to their hearts' content, whilst those looking for something more in-depth have a vast challenge on their hands.

Xiphos is an excellent example of a contemporary space trading game. Let's hope the Simula system is used to produce software of similar quality in the future.

— Alex Russell

ELITE ON THE WANE?

Elite generated a whole genre of space trading scenarios that has kept discriminating gamers busy for several years. But can the formula survive?

The problem lies in the increased competition from strategic games like *Penetration* and *Powermancer* on the one hand and the growing complexity of conflict scenarios (eg *Millwinder*) on the other. The space trading genre has a lot of potential, but it needs to be taken into new areas of resource management and interaction if it is going to give us another game as influential as *Elite*.

Spellbound

Spellbound Don't get caught by the Warlocks!

Just as you were about to advance a grade in the school of magic your tutor goes and gets himself kidnapped. You have to rescue him or you'll never graduate.

Battling through eight diverse and dangerous lands, collecting spells and objects along the way, you use your limited magic powers to fight off deadly adversaries in a fraught-filled fight to free your tutor.

But it's going to be a tough task on your own: take a friend along to increase your chances and double the fun!

Can Cadaver breathe new life into an old game-style? IMAGEWORKS and the Bitmaps follow up Zoo's *Treasure Trap* with another 16-bit isometric 3D adventure

At last! A chance to practice evasion routines whilst Pity Bore waits for you...

Isometric adventures were big business on the 8-bits, with games such as *Head over Heels* and *Batman* leading the pack. The secret of their success was probably the fact that they appealed to just about everybody - there was pre-precision jumping for platform freaks, monster blasting for arcade addicts and puzzles galore for adventurers.

On the 16-bit machines, for reasons not entirely clear, there have been very few isometric titles (*Zoo's* recent *Treasure Trap* is one exception), so *Cadaver* comes as something of a curiosity, blending a feeling of déjà vu with a sensation of excited rediscovery. Its credits are certainly impressive - you can't argue with the famous Bitmap Brothers - but can even this much hyped team breathe real magic into such an old genre?

The game starts with you, Karadoc the dwarf, standing by your boat at the entrance to the eerie Castle Wull. Your mission isn't made clear in the instructions; you have to find it out along the way. This means your first couple of goes will demand a lot of exploration and experimentation to get you a rough idea of what you're supposed to be doing.

The object control method is much more complex than you'd expect if you've been brought up on games like *Knight Lore* and *Head Over Heels*.

Another pretty screen, but *Cadaver* tends to offer rather more scenery than action. As you can see, there's not a lot of boating, bobbing, weaving opposition here.

Beautifully constructed screens include underwater lakes and ponds from which arise occasional death-dealing monsters.

CADAVER

- it consists of a group of icons at the base of the screen which roughly depict different actions (e.g. drop, throw, etc.) You select the object you want to use from your rucksack and then whatever you want to do with it from the icon menu.

Graphics are everything you could want them to be - crisp, clear and colourful. The screen is beautifully designed, with everything falling into place just right. The sound effects are few and far between, but what's there is adequate.

The problem with *Cadaver* is that it seems to have lost a good deal of the appeal of the old 8-bit isometric games. That appeal was basically the degree of arcade action - jumping, dodging, and sometimes firing - and the puzzle element was effectively confined to small doses. The

games were easy to get into and the screens were constantly alive with obstacles and opposition. A simple recipe. OK, but an effective one.

In *Cadaver*, however, although all the ingredients are still there, the balance has changed. You spend a lot of the time just walking around, picking things up, dropping them, and walking around again. Although still undeniably an arcade adventure, the emphasis is definitely on the latter.

There's no denying that this is going to be as polished a

game as you're likely to get and there are hundreds of screens and lots of puzzles - but the isometric presentation of the game is slightly misleading. No jumping, dodging mayhem this, but more of a multi-screen puzzler. That will doubtless appeal to many, but personally I think the old recipe had more bounce.

© Nick Baynes

We only had the first two levels of *Cadaver* to play with, so the definitive A/C rating will have to wait. The beautiful presentation, however, makes a commendable product. There's certainly a lot here to keep you busy, but whether it's the business you're looking for depends on your liking the puzzle and exploration rather than the

O riginally titled *Federation War* (but renamed *Captive* in a recent AGE competition) this excellent Tony Crowther epic places you in the confines of a huge orbiting fortress somewhere in the depths of space. You are there, not unreasonably, because you are the most evil man in the Galaxy.

Having been cryogenically imprisoned for two hundred years, you are woken by a malfunction

Veteran programmer Tony Crowther leaps back into the limelight with superlative space-age challenge for MINDSCAPE

CAPTIVE

within the holding computer. With absolutely no idea where or who you are, you proceed to explore the outside world via four droids, controlled by you from a small computer contained in a briefcase (handy eh?)

Each droid comes in kit form and is fully interchangeable with the others, giving rise to various possible attribute configurations. Together the four units form a sort of RPG 'party' that you move about in battle formation. Under your remote control, your droid party must traverse the 10 bases holding the fortress in its orbit, destroying the power source in each and obtaining a spacecraft to transport the party to subsequent fortresses. Once all 10 bases have been shut down, you must fly the droids to the central fortress in an attempt to rescue yourself.

The opposition is plentiful and comes in a variety of forms, ranging from violent dwarves through mechanical tanks to dragons! Coming up against any adversary requires fast reflexes, thankfully catered for by the icon-driven interface, which makes for easy control in any situation. The icons themselves are arranged into relevant clusters and most fulfil a dual function, depending on which mouse button is pressed. The left button initiates an action, whilst the right allows the player to access a special feature relevant to that icon. The most obvious of the controls is the movement cluster, moving

Build your own using a joystick, rather well given... One of the many information screens within *Captive*, detailing a view of the spaceport nursery

Amazing! One of the many information screens within *Captive*, detailing a view of the spaceport nursery

SYSTEM ARCHITECTURE

Once booted up, the first thing to hit you about *Captive* is the size: a staggering total of 55MB of memory (64000 bytes) to use!

All this is possible because *Tony Crowther* has developed a new data generating and management system, called *Architect*, which means that each base is unique. The system also means that each level is unique: a simple, linear, higher level can be automatically generated. *Architect* adds variety of gameplay and environment to some excellent, hi-res graphics in a distinctive style which suits the game well, enhancing the feel of each alien world. The various inhabitants of each planet have interesting character traits and have been carefully designed to convey as much variety and originality as possible. Have you ever seen a fanged rampaging bush before? Sound is represented in true, real-time stereo for that alien enhancing effect - it's a bit repetitive but that doesn't detract from the gameplay.

each droid in battle formation. This control also allows you to rotate your droid, giving you a view of your immediate surroundings whilst remaining in one spot.

Each droid may be moved around within the formation by clicking on two separate droid icons whereupon they will swap places. The lead droid is denoted by a crown on his position icon, (to the right of the control cluster), which also shows a simplified health and power reading and allows you to be promoted to leader simply by double-clicking the icon.

Information on general health and the contents of each droid's backpack may also be gained from this icon. It is from here that the droids may be modified - objects and even limbs may be exchanged. Other important icons include the multi-droid icon, allowing the player to view the statistics of all droids at once; the hand icons (for allocating, swapping and using objects) and the disk icon, which allows the player to load or save a game in progress.

DUNGEON MASTERY

The majority of the screen is devoted to the main viewing area, where the action is displayed in first person perspective (using a similar 3D style to that seen in *Dungeon Master*). Your location is viewed through the eyes of the leading droid - in the event of its demise the screen blacks out.

Battle against enemies is carried out by clicking on a droid's hand icon to administer a punch of empty handed; or a blast from the current weapon held. In typical skill-based RPG style, different droids have different degrees of proficiency in using the various weapons.

When creatures die, they may leave objects to be picked up, such as more weapons or money. Battles often lead to injuries, whereupon you wander around until you find a shop where any spare cash may be spent on armoury, useful extras or repairs to damaged droids. Above the main play-view are five screens displaying extra information, such as local environment or even a sneak peek to spot danger, using a remote camera which may be purchased from one of the shops.

Fans of *Dungeon Master* will find *Captive* an essential buy, combining the elements which made the former so successful, and adding the ability to control and modify four different droids (and save them for later use), giving the game a further element of strategy whilst retaining all the speed and action of an arcade game. For those with a less than strategic inclination, *Captive* will still prove exciting due to its large number of possibilities. It's also far

from easy to complete, providing many hours of intriguing gameplay.

YOU NAMED THAT GAME!

Captive entered the ACE Readers' Choice Game competition and chosen it. The winner is John Millward from Dudley, West Midlands. His suggestion was, of course, *CAPTIVE* and he's won himself a Gemstar and Mindscape software. Not only that, but Mindscape have agreed to credit John in the game itself.

The two runners-up (who also receive Gemstar) are Mark Hughes from Glasgow in Derbyshire, who suggested 'The CALLER' (The Cygnus Benchmarking Last Logic Synthesis Droids) and Andrew Pike from Soles in Manchester, who put forward 'Scapes from (Galactic) Cryo-Crypt 240415 serious'! Andrew then goes on to say that 'if you add 286 and 419 you get 645. The Number Of The Beast'. E...yes...of course...

John Peter Brown, responsible for the *Captive* artwork, also created all design for Gemstar, Star Wars and Merlin.

Captive

The quest for freedom!

When you can't remember who you are, where you are and even what year it is, then you know trouble cannot be too far away...

Held Captive for two hundred years in an orbiting space prison for a crime you didn't commit, you are desperate to escape from your electronic gaol.

Armed only with a briefcase computer found in the corner of your cell, you start sending out electronic SOS calls to the battling world outside.

Eventually you find a motley crew of four droids ready to help bring about your escape.

...so begins your quest for freedom!

*Actual
shots*

M I N D S C R A P

Your probe leaps to save a shot. The movements are beautifully programmed and animated.

The first thing you notice is the viewpoint. Most games have the usual top-down view or, in the case of Kick Off, from directly above. Microprose however have opted for one at eye-level.

The effect is extremely attractive, especially when combined with excellent player movement (surely the best ever).

The player under your control is indicated with a white arrow, but unfortunately the attractive display method makes gameplay difficult. The amount of pitch shown on the screen is comparatively small, so when the opposition have the ball you usually have to direct off-screen players in for a tackle, which is extremely difficult. And, of course, the computer is bungling in off-screen players too, so you often lose possession to players who have only just materialised. There is a pitch radar screen which helps, but to play effectively you have to spend more time looking at this than the actual screen.

Presentation is very impressive with smooth

One of the best aspects of the presentation, a digitised shot of the stadium after the game.

animation and nice colours. As in all of too-be games these days there is the digital scoreboard with a 'We Men' like character that either congratulates or commiserates depending on who scored. Another nice touch are the pictures of the Ref and the Linemen which appear with touts and throw-ons. Sound effects are the usual cheers and whistles along with some nice tunes here and there.

The passing system is one of the game's strong points, however. The fire button controls power, left and right movements the swerve, and vertical movements the height. The power bar is split into four blocks, with each one representing an increasing degree of power. Height and swerve are adjusted while the fire button is pressed so unless your going for a full powered ball you'll need to be quick.

The Goalie is controlled by computer except in penalties. It's for this reason alone that I didn't get thrashed 10-1 by the computer. There are 3 skill levels. Easy, where unless your passes are totally off they always find their mark. Intermediate, in which the ball is semi-intelligent, and Advanced in which you have to do all the work you self.

In the actual game you have the choice of either World Cup or Superleague in which the best clubs around the world square off with one another. Apart from these the only other things you can do are to practice passes, penalties, etc. Although you can choose your team, you can't choose formation or the players you want, losing the World Cup test that, for example, Italy 1990 had.

The worst thing however is the lack of a two player option which has to be the most important thing affecting playability, because in almost every case, playing with or against someone is infinitely more enjoyable than doing the same with a computer.

Microprose are renowned for their excellent flight sims. Perhaps that's why this product seems to have veered a little too far towards 'leaky' - computer looke needs to be a game first and a simulation second.

© Khalid Howlader

Just as you thought the season for "footie" games was over with the end of the World Cup, MICROPROSE release what they call 'the most accurate simulation of football seen on the screen'

INTERNATIONAL SOCCER CHALLENGE

TORVAK

THE

WARRIOR

The team that brought you the excellent *Rick Dangerous* go hacking and slaying with CORE DESIGN

Remember Conan? So do Core Design, whose latest release *Torvak The Warrior* bears a striking resemblance to the story of said sword-wielding maestro.

Following a five year self-imposed exile, *Torvak* returns to his homeland Ragnar, ravaged beyond recognition in the bloody Tormansan wars.

Having reached the outskirts of the once thriving village, he is startled by a voice emanating from the now twisted figure of The Elder, who informs *Torvak* of the arrival of the Necromancer and the darkness he has brought to bear. Instinctively, *Torvak* now knows the path he must take – a career in carvery as a hacking, slaying sprite.

Initially armed with a double-handed axe, you must guide *Torvak* through the five levels comprising his homeland until coming face to face with the Necromancer, whom you must then dispatch. Each level is distinctive, increasing in difficulty, beginning with *Torvak*'s ravaged village and progressing through the swamp to the mountains and into the jungle, after which you must negotiate the Necromancer's castle.

Particular types of enemies including Orcs, Piranhas, Scorpions, Warriors, Spiders and Killer Porcupines are specific to each level and have distinctive attacking methods, each of which must obviously be dealt with in a specific way. Levels also include some ridey ground sequences,

Torvak really leaps into a marsh, wielding his merrymaking and going for treasure

mer and a merrymaking

Throughout each level, destroying certain parts of the scenery releases bonus items such as armour (for limited protection), food (to replenish energy) and treasure. In addition to these more basic items, you may also come across special bonuses such as Speed Up, decreasing *Torvak*'s reaction time; Extend, adding extra nuts to the maximum energy allowed; and Power Up. The last of these bestows *Torvak* with greater hit power against adversaries and, when coupled with Speed Up, gives you a good idea of what Bruce Lee would have been like playing Rambo. Each item collected is displayed above the main playing area in the status window.

Progressing to the end of a level brings

Your heart is about to beat a little faster as you reach the end of a level, accepting that there's a boss in the process

accessed via holes in the ground, but including the same hostiles.

Attacking an enemy may be achieved using 3 combinations of joystick movement and fire button, in addition to which *Torvak* may find and cast spells. These are, in effect, magical versions of the 4 possible physical weapons – the default

axe, a sword, a ham-

Just some of the ugly critters you'll have to carnisade during your hacking, slaying, slicing, dicing, derring-do

hack'n'slay game in the same vein as the age-old *Rastan Saga*. The other immediately inescapable fact is that *Torvak* can be extremely frustrating. The slow initial speed of the main sprite hampers the gameplay and lowers the interest level.

Once used to the sluggish control, however, timing begins to improve along with gameplay and progression. Each level is of considerable length and the extras to be found are a welcome addition to character performance and keep you persevering in a game that would otherwise lose interest fairly quickly.

On the visual side, *Torvak* suffers somewhat. Although the sprites have all been well designed, colour and animation appear to have been lost along the way, both falling far short of what a 16 bit machine is capable of. Backgrounds are both lacklustre and repetitive, with a non-parallax horizontal scroll and very little detail.

Sonically, FX are limited to the statutory grunt and swish noises associated with hack'n'slay games, and the soundtracks (that are present) would seem somehow better suited to a race game!

A challenge, certainly, but the determination is as much to overcome the unresponsive control as it is to succeed and enjoy. Definitely a game for devout barbarian fans only.

1.8 half and 1.8 puff! The spectacularly animated opening sequence from DRAGONFLIGHT

On a wing and a prayer with THALION

THE DRAGONFLIGHT SERIES		
ATARI ST	£29.99dk	Early Sept
AMIGA	£29.99dk	Early Sept
No other versions planned		

In the traditional mould of the role-playing game, Thalion Software, previously known for such games as *Seven Gates Of Jambala* and *Chambers Of Shaolin*, now bring you *Dragonflight*, a quest to reinstate magic and discover the fate of the dragons, now disappeared but once prolific within the land of Pegana.

Incorporating all the aspects that RPG fans have come to appreciate, *Dragonflight* promises to include real game depth, atmospheric sound and stunning graphics together with numerous animated sequences (including battle scenes) of very high quality. Taking control of a party of 4 characters - now almost standard within any fantasy RPG (warrior, magic user, dwarf and elf) - *Dragonflight* leads you through 10 dungeons with up to 14 levels displayed in the first person perspective and through 12 cities and villages.

Interaction is of course vital and to this end there are dozens of free-roaming independent characters whom you must associate with in the event of success. As well as presenting the player with an extensive system of spells, *Dragonflight* incorporates more than 150 use-

Search 'n' Seize! any one of those four characters are fully at your disposal

able items such as weapons, potions, clothes and scrolls. Presentation comes in the form of a lengthy, illustrated novella (describing plot and detailing instructions), sticker and poster.

All in all, 2.5 megabytes of data have been used to bring you an RPG of what looks like the highest quality. Don't miss the full review of *Dragonflight* in the next issue.

NIGHTBREED - ARCADE GAME On the C64, all six versions of the arcade game took six months to develop.

Two tense tales of terror from OCEAN

NIGHTBREED

NOBODY'S HOME The sequel to the UK's best-selling computer game of 1988 is currently being developed on the Spectrum, C64, CPC, Amiga, ST and Nintendo's Interleaved System. It features eight levels of play including shooting gallery, plus fast-moving robots and a photograph assembly for our chemistry. Out in November

PAINTING BY NUMBERS

The two Nightbreed games were programmed for Ocean by Painting by Numbers, a group of two programmers and two graphic artists. Mike Rogers, Chris Karry, Stephen Karry and John Beard. These experienced ex-Grimin guys have written loads of games in the past eight years including *Thing* on a Spring, *Monty Mole*, *Way of the Tiger*, *Prak 541*, *Jack and the Beanstalk* and *Run the Gauntlet*. They've handled all nine versions of the Nightbreed Interactive Movie and Arcade Game.

"We were part of the Grimin stable from 1984-88 but we eventually wanted some freedom to do our own thing," says Rogers.

So what was the hardest thing to program in the Nightbreed games? "Fitting all 4MB of data into the Interactive Movie was probably the most difficult achievement. Writing code is like building a pyramid - you have to get the base exactly right otherwise the whole thing topples down around you."

NIGHTBREED - INTERACTIVE MOVIE Trying to return Pelogun, a ferocious and hungry Nightbreed cannibal. After all, you're only meat.

Clive Barker's latest horror movie has inspired the chart-topping Manchester software house to develop two games based on the film: *Nightbreed - The Interactive Movie* (Amiga, ST, PC) and *Nightbreed - The Arcade Game* (Spectrum, C64, Amiga, ST, CPC, PC). Both games have been written by Painting by Numbers, a Sheffield-based software development team.

"We laired closely with Clive Barker and visited Pinewood Studios while the *Nightbreed* movie was being made," states Mike Rogers, one of the directors at Painting by Numbers and co-programmer of the *Nightbreed* computer games.

Clive Barker is a prolific British horror writer whose previous work includes *Hellraiser* and the *Books of Blood* short stories. Unlike many professional authors, he was very keen to have an input in game design. Rogers confirms, "The game is closer to the original book than the movie."

The book, movie, game plot centers around the Midian, a strange underworld populated by mysterious creatures, ghastly mutants and other eerie fairy-folk. The hero is drawn into this twilight zone, unaware that he holds the key to its future survival. You play that ill-prepared hero.

Nightbreed - The Arcade game is a traditional arcade adventure, while *Nightbreed - The Interactive Movie* lets Cinemaware games head-on. It's a mixture of attractive 'splash intro' screens and various mini arcade sequences with you either killing or dodging approximately 40 Nightbreed creatures.

Play begins with you driving a car around the outskirts of town via an overhead map display. If you manage to avoid the local asylum and police roadblocks, you're chased through a graveyard by a hungry cannibal called Pelogun. A quick burst on the mouse button gets you through this

NIGHTBREED - ARCADE GAME Even the Spectrum spectrum is scary!

FANG This conversation with the male Mitchell ends up if being haunted by Ocean's French connection. Be careful when someone bursts your bubble! Coming to a computer table top this autumn.

WOLF Ocean is France is converting this strange 'old' Corp rule platform, something as long. Out on the major stores in the autumn.

ordal and onto the encounter with The Mask, a nasty knife-throwing nutter. If you make it to the Midian you must navigate its underground complex and chasms in an effort to meet Baphomet, the master Nightbreeder. As Rogers puts it, "Discovery is the best part of the Interactive Movie" game. Look out for the *Nightbreed* movie and games as you read this.

STUN RUNNER

A fast, polygonal racer for speed freaks. STUN RUNNER has 21 levels including the Kasei Jet, Split Octillon, Clava Call, Coat Hanger, Claws and Blind Alley. Out in November on all platforms.

THE SPY WHO LOVED ME is a must-have for anyone who loves playing a spy. The game is set in a spy thriller mode. You can play as a spy or a double agent.

MIG-29 FULCRUM (working title). Domark's first flight-sim is being programmed by Zirc. A professional simulator design team who previously worked at British Aerospace on Harrier. The work has progress since when you'll play on Harrier. The game is set in a flight-sim mode. You can play as a pilot or a double agent.

"I'll take 2,000 lbs of cluster bombs and a couple of geyzers, please." Tooling up before the battle.

STORMOVIK

Take to the sky as a Soviet Top Gun with Electronic Arts new flight sim...

The year is 1991. The Soviet Union, in a bid to preserve its Communist status, is fighting a war against insurgents within its own army and against blocs of anti-communist terrorists, who operate from the other side of the East German border.

Enter the Russian's newest and most advanced ground attack jet – the Sukhoi SU25 Stormovik. Specifically designed for defensive low-level counter operations against ground targets, the SU25 is regarded as the best ground attack jet in the world, and is extremely difficult to shoot down. As an elite young Stormovik pilot with the Red Airforce, you'll be ordered to fly challenging and dangerous attack missions against the enemy, who will sometimes be fighting with sophisticated tanks and weapons captured from the Soviet Army.

As a new recruit, you're advised to train in simulator mode to familiarise yourself with the aircraft, its handling and weapons systems before you take on the real enemy.

Your flight begins with a 'bombing up' session where you select the necessary bombs and missiles. Then it's into the cockpit, rev the engines and scream down the runway. The first thing you notice about flying the SU25 is the speed; the vectorialised scenery whizzes

below you at an alarming rate, and you need to keep a constant eye on the height indicator on your cockpit Head Up Display (HUD) to prevent yourself from taking a violent return to earth.

The aircraft is extremely responsive to joystick control: just the most delicate nudge on the stick is enough to perform most manoeuvres and any panicky movements on the stick will result in you and your machine hurtling to earth in a fair-ground ride fashion!

SU25 takes place over a three year period, from 1991-1993, and each year has its own list of flight missions, which grow in difficulty as the conflict against the terrorists progresses. Select your mission and you'll be briefed on your objectives and the location of your targets, what weaponry to carry, and what sort of weaponry the enemy will be using against you.

As flight sims go, Stormovik is one of the fastest and smoothest I've seen on the PC. The program supports CGA EGA, MCGA and Tandy graphics mode. The sound is the usual collection of tinny-sounding PC effects, but once you get into the groove of strafing a lorry convoy at zero feel, you won't be too bothered about the sound.

One little feature I liked was the missions flown at night, and in extremely poor visibility (there's no horizon – just grey pea soup). Many different viewpoints from the cockpit to the control tower (now a standard feature in jet flight sims) are also included. Needless to say, there's a chunky

Oops... You're dead – but your material will keep your memory alive for future generations

First-person view of your aircraft and surrounding Russian targets from your cockpit

and authoritative looking manual included with the game, and you need to spend a little time poring over the basics before climbing into the cockpit!

There's nothing startlingly new about SU25 (the same menus of missions to fly, the same briefing and bombing up screens), but compared to other flight sims on the PC, it's fast, well programmed and challenging. Chicks away, Товарищ!

© Ivan Harekavsky

NB At the time of going to press, EA were still debating the final name of the game. Stormovik is the current favourite.

SU25 FACTBOX

This aircraft in Electronic Arts' new flight sim is based on a real aircraft – the Sukhoi SU25 "Frogfoot" close support and reconnaissance jet. With a crew of one pilot, a top speed of 545mph, and a combat range of 345 miles, the "Frogfoot" made itself a formidable reputation as a ground attack jet operating against Mujahideen guerrillas in Afghanistan. It's distinctive long wingspan enables it to carry a frightening battery of weapons for its role: two 37mm rocket launcher pods on each wing, cluster bombs and a centrally mounted gatling gun for soft targets. In addition, it can also carry laser-guided attack missiles, and air-to-air missiles for its own defence.

GOLD OF THE AZTECS

Discover the steamy secrets of US GULD'S Aztec adventure

Bret Corrad, ex-US Special Forces and one-time CIA, is an action guy waiting for an adventure to happen. The adventure comes along in the form of an old Amazon map, pinpointing the location of a hidden Aztec tomb. Within the tomb lies incredible wealth – and it's there just waiting to be plundered.

Programmed by Kinetic Software, *Gold of the Aztecs* is the result of 27,000 hours of work with several megabytes worth of graphics and animation. This arcade adventure smoothly scrolls on as Brett parachutes into the jungle, shoots his way past hordes of nasty Amazonian headhunters, and penetrates into the underground passages that lead to the Aztec tomb and the gold. As if the headhunters aren't deadly enough, the route to the Aztec tomb is riddled

with a variety of very nasty booty traps, all waiting to consign Brett to the same fate that befell a group of greedy Conquistadors 400 years before.

Against the dangers of the Amazon, Brett is armed only with his trusty automatic and a machete. Luckily he's a very athletic adventurer, able to run, jump, climb, not to mention forward and backwards somersault his way out of trouble. Guiding Brett through all the danger to the ultimate prize calls for patience, nerves of steel, and some serious joystick wiggling. Avoiding deadly blowpipe-wielding headhunters, killer ele-

Gold of the Aztecs – pretty and highly playable, with the added bonus of a SAVES option

phants, and deadly Aztec booty traps will take some practice.

The map gives you a scrolling piece by piece view of the complete layout of passages leading to the tomb, and as you'll see, it's enormous! Nobody could hope to get right the way through the labyrinth in one sitting, so a 'save game' option is included.

In terms of gameplay, layout and presentation, *Gold of the Aztecs* is a slickly conceived game. The sprites are detailed and well drawn – Brett himself is a typical Rambo style hero, while the headhunters are a pot-bellied looking lot. The horizontally scrolling jungle scenery is well rendered, colourful without garish and unrealistic, while the action style animation keeps the action moving.

It might take a long time, but finally getting Brett through to the actual tomb, and getting the gold, gives a real sense of achievement, not to mention wealth beyond your dreams. There's enough tension and excitement in *Gold of the Aztecs* to satisfy most arcade style adventure freaks.

● Ivan Hawkey

SHOCKWAVE

Digital Magic Software (DMS) was formed in 1988 by two ex-CRL games developers, Jon Law and Jules Burt. During his time at CRL, Law was graphics designer for the infamous horror games: *Jack the Ripper*, *Wolfman* and *Frankenstein*. So will the latest DMS releases look horrifying? See for yourself with these ACE sneak glimpses of *Shockwave* and *Escape From Colditz*.

● Rik Haynes

They're shocking. They're captivating. They're the latest games from DIGITAL MAGIC SOFTWARE...

The *SHOCKWAVE* barrel requires a full-on war – shades of Star Wars perhaps! In the game you have to "desperately try to design or destroy hordes of alien war machines attacking towards you!" An Antagonistic game due in September

Selecting your *SHOCKWAVE* armaments. You can carry five weapons – chosen from a total of 15 – on each mission. Factories also manufacture a strong shield, infra-red for night-flying and a cheating device which stops alien clocks for a limited time

Flying through the *SHOCKWAVE* factories is your Super Deeper Black IV Blastermobile. You must defend four sectors from alien invaders. Miss your mountain ore, support your oil supply in the sea, arrange your army in the forests, and defend your desert factories.

ESCAPE FROM COLDITZ used the idea of the boardgame but adds some arcade action. You control four allied prisoners of war attempting to escape the fortress – not a rare expert. Run-free but the German Special Corps of Colditz during WW2. This isometric 3D game towards war and internal security. If you really want to, you can even dig tunnels! Out in November on Amiga, ST, PC and C64.

Flying through the *SHOCKWAVE* factories is your Super Deeper Black IV Blastermobile. You must defend four sectors from alien invaders. Miss your mountain ore, support your oil supply in the sea, arrange your army in the forests, and defend your desert factories.

VAXINE

905

Colours have been used to give the degradation of a substance. In this case, the degradation of a substance is shown by the colour of the line. The line starts at a high level and then drops sharply, indicating a rapid degradation of the substance.

US GOLD have an antidote for E-Motion fans

US Gold's last ray-traced rarity was E-Motion, an odd but highly original game which played upon the basic concepts of 'Newtonian physics' and now, Assembly Line (who also gave us the super-addictive Pipemania from Entertainment International) have teamed up with USG to give us a shot of Vaxine...

This abstract game is set inside the human body and the objective is to destroy rampaging viruses. You must protect the key body cells which are half buried in tissue. The invading viruses are represented by different coloured balls as are your antibodies. Failure to hit the viruses with an antibody of a like colour does not destroy the virus, but causes a small star to be dropped, which when blasted, replenishes your limited ammo. In addition to this, clusters of stars may be found hovering over the landscape, for the same purpose. The amount your ammo is increased by, also depends on firing an antibody of the same colour.

Once the viruses have appeared, they immedi-

STARTING level one...

ately begin looking for a comparison of the same colour. Upon finding each other, they join and hunt for a third. When all three are straggling along they'll head for your most vulnerable parts and pluck them from the body wall. The viruses then pop with excitement, releasing more, different coloured bachelor viruses to repeat the process. To help you, there are portals in the body which, when entered, freeze the game and allow you to move around checking on the locations of hidden viruses. The level is completed when all viruses are eliminated.

Vaxine is definitely a game to test your skills, and while the overall look of the product may deter the more strategic player, the game does require a significant amount of thought as random blasting leads to an ultimately swift demise. Coupled with the need for rapid hand-eye co-ordination, Vaxine is recommended as an original and entertaining product.

Chris Morley

OPERATION STEALTH

Don't just sit there, you've got a stealth fighter to build!

The new Stealth Fighter is the most sophisticated aircraft in aviation history. Totally invisible to radar, able to fly low and fast, and possessing state of the art weapons and avionics, it's the pride of the US Airforce. Unfortunately for the Americans, it has been stolen!

The CIA is called in to hunt for the missing aircraft, and they in turn, call in their top undercover agent, John Glames (a sort of American James Bond). Using his skill, ingenuity, and an array of gadgets (including such handy travelling aids as a passport forging machine and a pen that squirts acid) Glames' mission is to take him to the exotic South American state of Santa Paragua, where the ruling Military Dictator is top of the CIA's suspect list in the search for the stealth, but he's got to hurry - the KGB has also heard about the disappearance, and their agents are hot on the trail.

Delphine has followed the success of Future Wars, with this, another Cinematic interactive adventure. Operation Stealth has all the addition of an interactive adventure, and is totally mouse-driven, making it instantly playable. Unlike the earlier Future Wars, improvements have been added in that any object you pick up and examine, are shown in close up, so you can actually see what you're looking at. You move Games around exotic locations, pick up, examine, and use objects and generally interact with the scenery and any characters you meet, all with the click of a mouse button. Glames' powers of deduction will be tested to the hilt as he picks up the trail of the missing fighter and tails suspects, but he'll also need to be brave and resourceful, to get himself out of dangerous situations. The graphics are well presented and the exotic scenery gives the game the feel of a James Bond story. The game will undoubtedly appeal to the sleuths amongst you, while the arcade gamers will like the roller coaster sequence in the game. The graphics, and animation are well designed and presented and the overall playability of the game makes for an engrossing and addictive game. You'll get really involved and won't want to leave Op Stealth alone until you've got to the bottom of the mystery. Operation Stealth is a well designed, thought-out and put together game.

LATE LONDON EDITION

LONDON WED

THE GREAT ASSAULT SUFFERS MULTIPLE SETBACKS

BAD WEATHER DELAYS TROOPS

MASS ATTACK BY AIRBORNE TROOPS REPELLED

The Allied Expeditionary Army was fighting last night on the beaches of Normandy after attempting the greatest operation of its kind in history.

Heavy casualties were suffered at sea from German shore batteries, and the attempted air invasion was aborted as parachute troops were engaged and shot down as they landed.

Mr. Churchill announced last evening that the sea passage had met with "far greater resistance than had been anticipated" as the

weather in the English Channel deteriorated rapidly, slowing the Allied Forces' progress as they met not the "stiff resistance expected, but a much stronger, and aggressive posture" adopted by German commanders.

German forces were expected only to defend the Fortress of Europe in the face of the concentrated Allied attack on the narrow Cherbourg peninsula. Their tactics of meeting the Allied attacking hordes with split forces on multiple fronts is a reversal of the strategy anticipated, illustrating the flexibility of the Axis forces' battle plans.

Orders issued by the German High Command have shown the highest degree of thought and planning, as far down the chain of command as those given to individual battle units. The front-line units have high morale and are showing great experience in resisting the Allies' invasion. They appear to be utilising the battle tools at their disposal to maximum effect.

It is imperative that the leaders of the Allied Expeditionary Force modify their invasion plans. It is fortunate that, very soon, Rainbird will give them the means to do so.

ATTEMPTED LANDINGS STALLED

A statement issued from Supreme Headquarters, Allied Expeditionary Force, yesterday, read:-

COMMUNIQUE No. 1

Under the command of General Eisenhower, Allied naval forces, supported by light airforces, attempted to land Allied armies this morning on the north-western coast of France. Early reports tell of heavy losses in the face of aerial and land based bombardments by Axis forces.

THE KING'S VISIT TO SUPREME H.Q.

BEACH-HEAD REPORTS

The King visited General Eisenhower at Supreme H.Q. Allied Expeditionary Forces yesterday afternoon. He was accompanied by Mr. Winston Churchill, as Minister in Attendance. The King and Mr. Churchill also visited Air Chief Marshal Sir Trafford Leigh-Mallory, C.-in-C., at his H.Q. of the Allied Air Forces.

The King and the Prime Minister drove together from Buckingham Palace immediately after luncheon, which Mr. Churchill had taken with the King. At the H.Q. the King and the Prime Minister talked to high officers directing operations in the field, and were shown the expected effects of the one hundred variables governing the outcome of the invasion. They were also shown reports coming in from the beaches, and discussed the Production goals which have been set towards building up the ports of Southern England.

ALLIES' TACTICAL MISTAKES

From our Special Correspondent in London

It was becoming apparent in London last night that Allied commanders may well have underestimated the potential of the German Forces, and made serious tactical errors in drawing up their initial battle plans.

They must now reassess further lines of action in order to take full advantage of the flexibility at their fingertips.

The 'Atlantic Wall' of resistance built by the Germans cannot apparently be surmounted by the single unit attacks launched against it under prevailing conditions. Allied forces are preparing to switch to multiple front attacks with a brightening of aggression. The concentration on viewing the battle at Division Level must be widened to encompass a greater degree of Group Level strategic planning.

Even if such last minute switches in the battle equations prove wise, doubts are surfacing in London over the Allied Forces readiness to encounter all sixteen terrain types if a successful beach-head is established.

Allied command has extensive knowledge of all 'special squares' along the French coast. These are points of major strategic importance such as ports, towns and fortifications. They are gunning up to the minute information on local temperature, climate and wind direction, in addition to the potential capability and strengths of the Axis production ports.

Keeping track of all the factors within the conflict is being made easier by the constant updating of battle reports dispatched from the front, and the inputting

of this information into sophisticated pre-drawn battle plans.

So that the early losses which have been suffered may be reversed, and the threat of German counter-invasion may be repelled, Supreme Allied Command are adapting those battle-plans in their Master Control Panel, thought to be a body of men comprising the finest military brains available worldwide.

WAITING FOR THE WORD A VAST GATHERING

FINAL MOVES TO THE SEA
From Our Special
Correspondent
An English Port, June 5 1944

The time has come. All we await now is the word to go forth and strike the terrific blow in Western Europe, of which General Montgomery writes in his valediction to the assault troops under his command. When this despatch appears that blow will have been struck; and as one gazes out over an anchorage of fond remembrance in which, framed by the

sweep of England's green shore, countless invasion ships lie at their stations, the mind recoils from the dimensions of it all.

For those tight packed ships represent only one of the rivers of men and machines that all along the coast are pouring out into the sea. Four years ago, almost to the day, the tide of water had flooded from the east into the French channel ports before swirling back on Paris and far beyond. Now the tide has turned, and in this suspended moment of history the first mighty wave is gathered before it crashes down on the enemy's beaches. And the near observer gets no more than the fleeting, awesome glimpse of it that a solitary swimmer would have of a great breaker in an angry sea.

THE MIGHTIEST REWRITE IN HISTORY

The mightiest of all time - such phrases come glibly but say very little. Words, indeed, pale before the vastness of the reality; attempts to convey the sheer depth of strategy fall in prose. To experience is to understand - Nations at War.

Borne of a classic, the original UMS imitated but never surpassed. Until now. This fragile planet for which man fights is mapped with precision. From the war-clouds enfolding our Earth in the bloody battlefronts of vulnerable flesh, this is a truly Universal Military conflict. Such an abundance of changeable parameters has never governed the activities of Nations at War before.

War has winners, but this is no game. It is the greatest wargaming utility. To encompass the changing political, economic, climatic, geographic and human factors was the interplanetary goal. At last, perfection is achieved.

Learned from the lessons of history, from the crusades of Alexander to Napoleon's quest for Europe and beyond, here is the knowledge, requiring only the skill of a would-be Commander of men.

As Allied Supreme Command struggle for the means to reverse the error of their ways, up to fifty people sit down in the hope of rewriting history.

They now have that ability.
UMS II - Nations at War.

UMS II - Nations At War - incorporates three scenarios, comprising the Assault on Fortress Europe, the Crusades of Alexander the Great, and the Napoleonic Wars. Developed by Intergalactic, the award winning programmers of the original UMS, in conjunction with Rainbird, the Masters of Strategy, UMS II will be available for your Commodore Amiga, Atari ST, IBM PC and compatibles and Apple Macintosh.

MEETING THE CHALLENGE

Why is PSYGNOSIS pumping huge amounts of cash into game development?

More sophisticated gameplay, revolutionary new graphics techniques, even better intro sequences – these are just some of the advancements *Psychosis* is promising with its next generation of games. ACE readers have already seen *Shadow of the Bersz 2*, *The Klong Game Show*, *Awesome*, *Waller* and *Puggsy* back in issue 34. *Psychosis* is also working on the games shown here: *Obitus*, *Carthage* and *Nitro*. Look out for full reviews after ACE has played the finished versions.

● Rick Kraybill

► **CARDHASE**. Strategy wargame set in ancient times. Enriched by chaotic race arcade sequence (shown here) and a fractal-generated map. Out in October on Amiga and ST.

OPERATION HARRIER

Slitting the Butchers of Bangladesh

Five years after the controversy of *Raid* over Moscow, US Gold gets topical again, this time with a Middle East shoo!-em-up. Are

**Rotoscape your Harrier
around the Middle East in
US GOLD's aerial
shoot'em-up**

siles pods, 500lb or 1000lb bombs. You're shown your jet on the carrier deck, being readied for take-off, then it's thumbs-up.

Certain fanatical Middle Eastern powers have acquired nuclear warheads, and now threaten the stability of the world. You're the pilot of the versatile vertical take-off Harrier jet, sailing somewhere in the Middle East onboard a US aircraft carrier. Your job as an ace Harrier pilot is to retrieve the threatening nukes. You can only do this by successfully flying a number of missions against the enemy before going in for the pick-up.

Operation Harrier is designed by Creative Materials (the people who gave you Rotox) and uses the same Rotoscope technique. Your jump jet is viewed from above, with everything below it rotating through 360 degrees.

After a mission briefing from the commanding officer (a manic looking fellow), you select the weapons your aircraft will carry for the flight, choosing between heat-seeking missiles or mis-

and away you go. Most of the missions are bombing raids against enemy ships and ground targets. You must watch out for enemy jets and helicopters – too many hits from air-to-air missiles, and you'll go down in flames, suffer a soaking and a humiliating dressing down from your superior. Complete each mission, and you'll have the chance to get the nukes and save the free world.

As aerial shoot-em-ups go, *Operation Harrier* is a disappointment – the scenario and gameplay are very unoriginal. Gameplay and graphics simply become monotonous the more you play the game. The Rotoscope, which worked so well in *Riotix*, loses its novelty here, and perhaps should be kept to outer space. If US Gold want to cut it with aerial shoot-em-up fans, it will have to do better than this.

Simulcra uses a grid-based map similar to Virus but includes "bank" powers, introducing ground-based and flight

action

SIMULCRA

MICROSTYLE hurls you into the computer war of the future and produce a red hot 3D shoot-em-up as an incentive...

ALL OUT WAR

To add variety to an already exciting game, Microstyle have thrown in a wide variety of enemies. First, and most common, are the laser barrels that slowly sweep in a complete circle until they lock onto you, whereupon they fire viciously. Various ground and air attack craft, such as jets and small tanks, race around the work ways, thankfully needing only one shot to kill. Then you reach the ring tanks - these can only be killed with missiles, but when shot explode in the most satisfactory way yet, by the effecting the gun turret and then collapsing in on themselves with a terrific sound effect.

Throughout the game you also have access to a map screen for strategic planning - and there's also a neat power-up that gives you short range mapping/radar facilities while you're moving.

© Chris Morley

Cyberspace rules in the far future, where even war is played out inside massive computer simulators. A particularly unpleasant virus has, however, had the effect of projecting the combat into the real world and as a result you have hordes of bloodthirsty simulcraft plots wreaking havoc all over the place. Your objective is to enter the battle matrix and destroy the other craft as well as the matrix itself.

You control a sophisticated Surface Reconnaissance Vehicle (SRV) with swing wings that give it limited flight capabilities. You drive your SRV around the matrix, encountering every so often a thin red line that denotes an energy barrier beyond which you cannot pass. You must then locate the relevant energy projector and destroy it, which will lift the barrier and allow you to proceed.

Simulcra is verging on the awesome, conjuring up immediate comparisons with the classic Virus. Your SRV rotates 360 degrees and can fly or drive. The rotation and shading are excellent and the game has a great feeling of speed. Battle is fast and furious and you can power up the SRV with loads of goodies including speed-ups, radar, fire and forget missiles, target display systems, shields, and extra lives.

The result is a fast paced 3D shoot-em-up that is slightly similar to Resolution 101 in gameplay terms but blends in elements of Falcon and Virus

as well. In addition, the grid construction introduces a make element. Sound effects are superb and add to the sensation of speed. There's also a wonderful intro sequence.

Just what a game should be: looks good, sounds good, and plays like a dream.

Solid graphics with 252 non-player objects and 100 particles

TECHNO PORN!

The 3D vector graphics system in Simulcra features solid filled 3D graphics with shadows and light intensity surfaces. The system allows solid and wireframe surfaces to be freely mixed. Stippled and transparent/translucent surfaces are also employed.

The game code runs up to 252 non player objects on the map. The game cycle rate and the draw cycle rate are independent so that game time can be kept near as less constant even if the display rate is slowed down.

Special explosion effects are achieved using a highly efficient particle controller that individually moves up to 100 particles. Definitely a game that goes with a bang!

Player Manager

by Dino Dini

ST ACTION: The presentation has to be the best I have ever seen in any management game. Combining the compelling game play of Kick Off with the strategy of team management was a stroke of pure genius.

THE ONE: Player Manager is an exceptional football management simulation. It has astounding depth: an unmatched 1000 individual players, the ability to radically alter formation and team tactics – just about everything you would find in real football. Player Manager is the most involved, rewarding and playable games of its type.

THE ACE: The beauty of the Player Manager is that it successfully blends a challenging soccer management game with the frantic end to end arcade action of Kick Off. Designers have been trying to marry arcade footy with management for years – almost always failing abysmally. Player Manager brings it off in style.

NEW COMPUTER EXPRESS: The sheer depth of Player Manager is incredible. Almost every conceivable element of running and playing in a football team has been implemented including Kick Off. Anco has produced what has to be a definitive Manager game.

COMMODORE USER: One of the most impressive options yet seen on a managerial game and the keystone to the addictiveness and involvement of this game is Tactics option. P.M. lets you plan all your set pieces just the way you want them. You will never be able to say you aren't in full control of the game. At last a management game that requires true management skills. Add to this most addictive arcade soccer game ever – a winner.

AMIGA FORMAT: The mix between management and arcade is the best to have appeared in any football game. You will be playing it for months there is so much to do.

ZZAP: An incredible realistic simulation of every aspect of football.

SILENT SERVICE

MICROPROSE runs silent, deep and deadly

From its very outset, *Silent Service II* is typically Microprose: vast scenario, hugely complex gameplay and intense attention to detail. If ever there was a game that demanded significantly more than fast reflexes and a happy trigger finger, this is it.

Set against the historical backdrop of World War II, the program gives you the opportunity of recreating, in whole or in part, the career of a US submarine officer. This represents anything from thirty minutes to hundreds of hours of game time, supported by a 128 page manual, keyboard overlay with 70 commands, and dozens of mission possibilities.

Once through the obligatory security check (where you must correctly identify one of eleven Japanese warships), you are met with a massive array of options. The first of those presents you with four distinct game scenarios (see Battle Stations); others include selecting one of four difficulty levels (ranging from the complete novice, to the Ultimate

player), starting date for engagement, submarine class (the latter two options are vital to one another as the chosen date dictates the sophistication of the submarine allowed) and even torpedo type!

Subsequent options presented to the player during the game depend heavily upon those chosen at the outset, leading to many possible situations. A typical battle scenario can involve close combat with dozens of marauding Japanese warships at short range, giving rise to much panic on the part of the player! Gameplay tends to alternate between the Bridge Screen (where you sight your targets) and the Map Screen which enables you to make more long term strategic decisions.

Apart from actually controlling your ship, there are numerous intermission scenes ranging from seeing your torpedoes launched to monitoring the Captain's Log.

Aesthetically, *Silent Service II* is of a high standard throughout with digitised illustrative screens and well drawn, easily readable displays. In addition to this, each enemy ship is portrayed from a digitised photograph in any one of 24 perspectives for added feel.

One minor niggle involves continual disk access, in that accidentally pressing a key can involve waiting while the machine goes through its paces, although the ability to turn off certain animation screens helps solve this. That apart, *Silent Service II* is a must for all fans, and a worthy successor to the original, which has now sold so well that it is being converted to console!

• Alex Ruranski

BATTLE STATIONS

The four scenarios in *SSI* should keep even the most ardent skipper busy for months to come.

First, **TRAINING** involves simple cruises and attack sequence in the vicinity of four armed freighter hulks. Its purpose is to familiarise you with the craft, the manual and the controls.

Then, there's **SINGLE COMBAT**, which isn't actually single at all, but drops you into one of nine engagements, eight of which are historically based. The ninth is a random encounter with a Japanese force.

SINGLE WAR PATROL propels you into the Western Pacific, hunting down the expedition, engaging them and returning to base.

Finally, there's the big one - a complete **WAR CAREER**. You join as a Skipper at any time during WW2, sail a series of war patrols in one or more boats, and finish up in either the grave or the victory parade. Microprose claims this final option could involve 11 months of hours of gameplay if you start at the beginning of the war in 1941.

All options pit you against Japan - America's mortal enemy after the mid-40s Pearl Harbour raid until the end of the war following the atomic bombings of 1945. The struggle with Japan sprawled across the western half of the Pacific and among America's "Silent Service" heroes were men with silly names like "Mush" Morton, Dick O'Kane and Red Ramo! Now you can join them.

The Bridge Screen. Although this is where you sight your target, you can also access all pertinent information systems from this screen.

Damage control reports are comprehensive. Rapid action is needed if irreparable damage is not to become an irreparable disaster.

PIC

With a wide range of options and several difficulty settings, the game offers the best of the computer world and the human world, combining the computer's flexibility with the human's creativity. The game is a must for those who love to play for hours.

IBM PC

Requires Windows 3.11 and 386 or 486 processor, 1MB RAM, 10MB free hard disk space, VGA or higher graphics card, and a mouse. The game is available in English and French. The game is available in English and French. The game is available in English and French.

PROFESSOR MARIARTI

KRYSA LIS send you blasting and puzzling into a mad professor's laboratory

Professor Mariarti has been instructed by Local Government and, as the Prof, you have to race about the flip screen map solving any problems in typical platform-game style. Your objective on each of the five levels is to reach the switch and cut the power. The problems are based around using particular objects in particular situations, such as wearing a divers helmet in a pressurised room.

Wandering about the rooms of the labs are the Prof's creations, which range from the predictable (marauding robots) to more exotic pools of roaming slime. These can be either stunned or destroyed, depending on the creature and/or which weapon you are currently carrying. They don't disappear for long though, so this only really serves as a short breather.

Platform games need to be pretty spectacular these days to make any headway. Krysalis went ed " - a game that had a hint of familiarity to it. Platform games are one of the most overdone genres of game, and we wanted a game that people could relate to. After all, one game I still play is Mario Bros!"

Unfortunately, Mariarti has a fair few shortcomings. First off, there's the simplicity of the puzzles. It doesn't take an O Level in Egg Biting to work out that the way to get past an electrified grid is to switch off the machine next to it.

There are one or two playability problems as well. The most frustrating is the double jump, obtained by keeping the joystick in the required direction. Unless you're very careful, this often results in you jumping onto a platform or ladder, and then leaping straight off again.

With a bit more spit and polish in the design department, Mariarti could have been great. As it stands now, it's only good for an hour or two on Sunday lunchtime.

© Tony Dillon

As attractive games become, and even that it's very easy to pick up. However, it's not a very convincing answer. In addition, while the playability isn't as good as the other games, the simplicity of the game also means that it doesn't have long to wait your way through it, that the usual feeling of platform.

AMIGA

Simply put, bringing to the ST equivalent, the Amiga and Atari are only marginally improved by the additional handling and the improved audio effects. And that's about all that can be said. The Amiga and Atari are not playing the game. The only thing that's really interesting is the idea of bringing out a really decent platform game for the Amiga in the future.

ATARI ST

Atari and Amiga graphics, but there is very little difference between the two, and both are great, making it very hard to tell the two apart. The only thing that's really interesting is the idea of bringing out a really decent platform game for the Amiga in the future.

got two useful gadgets to help you - a couple of teleportation pods to move around with and a zapgun to stun creatures and dislodge objects.

World history in this game is divided into five zones, each with five screens showing a single location from a wondrous map. If you can help along the course of evolution in one zone, you'll gain access to the next and so on until you reach the present day.

Time Machine is a tough brain teaser involving constant movement between different locations and time zones to solve the puzzles. For example, a bridge over a river in one time zone can only be constructed using an object from another area in another zone. Life is made more difficult by constant hazards that not only threaten your energy levels but may also undo your work, causing a time zone to 'collapse' and forcing you to start all over again.

Graphically, Time Machine is nicely presented, with colourful scenes of the various zones from prehistoric swamps, right up to the Professor's laboratory compound. The Prof himself is a class-c buffoon with white coat and flaming red Einstein hair style, and he moves around the scenery in the usual joystick-assisted way.

The challenge of this game is almost entirely confined to puzzle solving, and some of them are extremely difficult. Super resourceful whiz kids might make short work of the game, and be done with it, but more average brains like me will find it a real test and be hooked for quite a while. Once cracked, however, it will hold no further interest at all.

GAUNTLET

US GDLG attempts an amazing feat on the Sega Master System

Fighting the ghosts, demons and Dr. Death, in GAUNTLET.

When Alan launched this four-player coin-op back in 1985 it created a new arcade craze. People of all ages – and both sexes – could quickly master Gauntlet's easy to learn display, controls and tasks. An arcade sensation was started.

Everything is kept simple in Gauntlet. Choosing between an elf, wizard, valkyrie or warrior character – you wander round a maze searching for treasure and the nearest exit. Enter this exit and it's onto... yet another maze. There are 128 maze levels to master. Like most mazes, each is populated by monsters, tasty treasures and secret passages.

But boring it is not. In each maze you discover horrible beasts, ghouls and demons out to decrease your health rating. If this reaches zero, you're history. You keep the beasts at bay with your bow and arrow, sword, axe or wand – depending on the character you've chosen. You can also fight by hand – but this takes time and

isn't as healthy. Help comes in the form of collectible magic potions to stun the suckers, food to boost your health, and keys to unlock gates. Don't be too greedy though, pigging out on the pick-ups can seriously damage your health. Every so often, you visit a treasure room – collecting as many cash chests as possible within the time limit.

Gauntlet graphics are displayed in a slightly off-beat overhead style. The screen scrolls smoothly in eight directions and a status display on the right shows your score, health and what collectibles you're carrying. Sprites are small but highly detailed. Sound supply is standard spool effects.

Two players can simultaneously play Gauntlet. You can either assist or hinder your colleague. If you want a laugh, do both. The Sega Master version contains a few changes to the coin-op. Instead of individual player speeds you get differing rates of fire, and the thief has been replaced by potion penalties. So what? Sega Master Gauntlet is an accurate conversion of a fun fantasy shoot-'em-up. Go grab your slice some maze

© Rick Haynes

A C64 classic converted onto the Sega Master System by US GDLG

Look like our hero is heading for the candy... a Mission Impossible?

IMPOSSIBLE MISSION

"Another visitor. Stay awhile. Stay forever." Not the most inviting greeting you could wish from a game. Impossible Mission, inspired by the 1960s TV spy-shows, places you in the role of a secret agent out to stop the world-dominating plans of Professor Elvin. A secret password has been dissected into 35 pieces and scattered throughout Elvin's HQ. You must infiltrate his complex, find the password pieces, reassemble them, defeat the evil Elvin and save the world. By the way, you've only got six hours to do it.

"Deslroy him my robots." Traveling via elevators, you visit a myriad of rooms – pecked with deadly security robots – to find the puzzle pieces hidden away in household items like desks, sofas, bathtubs, bookcases and candy vendors. Each room is depicted as a multitude

Gauntlet on the Sega Master System was created by a very capable chap. Terry Porter now has some Gauntlet conversions in his programming portfolio. The game takes six months to write using the standard Sega development kit – a PC with ICS (In-Console) Emulator. "Sega Master Gauntlet is the best home version available including the 16-bit adaptations. Everything runs in 45/50th of a second – it's probably faster than the coin-op," states Porter. "Due to tight video chip access [time, the monster illustrations don't run as fast as they might be]." Even so, there can be no 160 monsters and 28 obstacles on-screen at the same time.

There is a secret cheat mode hidden in the Sega Master version of Gauntlet. The first ACE reader to find it will win a bottle of champagne courtesy of the generous Terry Porter – and he promises it won't be a cheap Alsatian import. Send your entries to CHAMPAGNE CHAMP, ACE MAP Images, Plorey Court, 30-32 Lutterington Lane, London EC1R 3AL.

of platforms and lifts, with you leaping around – avoiding robots and searching objects. There are many types of robot, each with their own movement patterns. Most are armed with electric rays. Some stand still, others home in on you, and the top of the range models move faster than you. You'll soon learn the robo patterns – don't make any hasty moves until you've sussed what type of robot you're dealing with. Computer terminals can provide platform resets and snoozes to temporarily stun the robots in a room.

"Aaargh!" Contact with a robot or its electro-beam spells your death, as does falling off the bottom of the screen. Every time you lose a life, ten minutes are knocked off your time limit. The password portion of the game is like a jigsaw puzzle. Randomly selected each time you play, the password is nine letters long. Each letter is formed by overlaying and correctly orientating four pieces of puzzle. Elvin's room layouts are random for each game, giving Impossible Mission an edge over other platform titles.

Call me nostalgic. Call me virtual. I hope someone, somewhere, someday develops a virtual reality version of Impossible Mission. It would make a perfect VR game.

© Rick Haynes

Batman throws his last trick in the air, leaving an enemy well out of trouble.

One of Jack's henchmen levitates a bomb in the Caped Crusader in the chemical factory.

SUNSOFT spreads its Batwings over the Megadrive...

The head honchos at Sunsoft must be rubbing their hands with glee and mouthing something like "Holy Bat Dosh" as they count the lolly rolling in from the proceeds of two smash-hit Nintendo versions of the Batgame. This Megadrive version looks like being the best quality version of the game so far, thanks to the Megadrive's superior specifications, and will doubtless keep the Batdosh whinging its way into Sunsoft's coffers.

Based loosely on selected scenes from last summer's film, the game challenges the Caped Crusader to do battle with Jack and his henchmen in various locations around Gotham City.

Batly has never looked better in a computer game. From the opening sequence when he leaps in with his cape flying in the breeze he is every inch the Acrobatic Avenger.

After a tough opening punch-up in the seedier ghettos of Gotham City, Batman finally tracks Jack to a chemical factory where he may succeed in dumping the arch villain into a vat of deadly acid. It looks like curtains for the super villain - but don't you believe it. Pretty soon Jack has recovered from the acid and is up to his old tricks again. This provides the excuse for a series of challenges - in the Guggenheim Museum, on The Freeway (firing missiles from the Batmobile) and finally in the skies above Gotham City.

Lots of Bat-symbol power-ups are to be grabbed as you travel the mawrns of Gotham City. Bat energy is the principle commodity to get your hands on since preserving as many Bat-lives as possible for the tougher end of level challenges is the only way to proceed.

Batman will test a variety of your arcade skills. The opening platform-style gameplay in the chemical factory seems tough until you master the use of the Batrope and the leaping mechanism. One early leap seems impossible until you experiment with aerial

This pipe is about as wide as Batly will have to spread his cloak and make a leap.

NINTENDO PRICES DOWN

Given separate, very different markets there exists no Nintendo series - a move that will have far reaching effects for all Nintendo and would be Nintendo's worst.

According to industry news paper Computer Trade Weekly the switch happened as Nintendo prepared to turn up the heat in the battle for the European video games market. Bandai already distributes the Nintendo in Germany and France and were not owed by the huge sum needed to finance the bid for the UK market - believed to be upwards of twenty million pounds.

Players will make a quick gain from the increased competition with a price cut on Nintendo hardware which should be effective by the time you read this. A special Teenage Mutant Turtles Pack will sell for just £79.99 with the Action Set Bandai falling to £99.95.

Gameboy prices are also set to fall when the popular handheld is officially launched in the UK the same month. The bad news is that neither Bandai or Nintendo are announcing any changes

simulators. The other areas are more simple - road racing and sky fighting.

Overall the atmosphere of the Batman film comes across very strongly both in graphics and in sound. The gameplay won't win any awards - basically an amalgam of various tried and tested, dated even, arcade challenges. That said, it is still the most comic-like interactive manipulation of Batman you are likely to get, short of becoming a multi-millionaire and building your own Bat theme park. Holy Bat dosh - now there's an ideal!

© Eugene Lacey

SEGA GIVE YOU FIVE

While most Nintendo will be most common to be the main topic of conversation in the video game business, Sega are steadily building their games library for the Master System already far larger than the Nintendo equivalent. This month see a line launch of five new cartridges - *ESWAT* (reviewed this month on the Megadrive), *Demon* - a jungle role playing game, *Colossus* - a 3D-type puzzle game, racing car on conversation *Super Monaco Grand Prix*, and platform game *Alex Kidd in Shinobi World*. Sega expect to launch at least five new titles a month between now and Christmas with further titles coming out from independent software houses.

DAYS OF *Thunder*™

PHANTASY STAR II

Plasy Star *N* is an American import of a role playing game very much in the Japanese style. Even the facial characteristics of the heroes have that strange huge-eyed, part European and part oriental look which is peculiar to Japanese video game heroes.

The countless references in the manual to "The Genesis" refer to the American name for the Megadrive. This is no problem as it works just as well on the English machine.

The storyline is fairly familiar in a distant corner of the universe three planets are in orbit around the beautiful star Algo. Paim is the economic and intellectual centre of the solar system, Mota the agricultural planet and Dezo is a mystery – and furthest from the Algo Star

Role playing receives the Megadrive treatment

The adventure begins on the idyllic farming planet of Mota. The all-powerful Mother Brain controls everything on Mota – from the carefully regulated 'Dome Farms' to the ecology of the lakes and forests. But the Mother Brain has developed a fault. Strange beasts are terrorising the countryside. Giant Fire Ants, Locusts, and Mosquitos are turning Mota into a nightmare land.

Into this madness comes a hero – yours I truly
Tap your name in and get role playing. The

Commander of Mota spells out the gravity of your mission. You must find the secret recording made in the Biosystems Laboratory, which it is hoped will throw some light on the malfunctioning of the Molnar Brain.

The first thing you notice about this spot of Megadrive role playing is its speed of response. It fairly whizzes along. Information windows appear in a split second after pressing your joy-pad. The method of talking to players and implementing moves is the

Our horses receive some good advice in their home town in Rhineland-Palatinate.

standard console system of multiple windows. It is all done with the keypad by choosing between alternatives and makes for very fast and absorbing adventuring.

More than most role playing games, *Phantasy Star II* requires a lot of conversation with the characters you bump into on your travels. There are clues, plenty of advice, rumour and snippets of gossip to be picked up everywhere and the wise adventurer will store them away like nuggets of gold for future use.

Worthy of special praise is *Phantasy Star II's* Hint Book. Over a hundred pages of full colour information – screen shots of every location, advice on combat, weapon and spell selection, and maps of all key areas. It makes the game a hell of a lot more enjoyable by doing most of the essential but laborious donkey work.

The sheer accessibility of *Phantasy Star II* will be enough to convince anyone who samples it that the Megadrive is just as good a role playing machine as it is an arcade box. These interplanetary adventures don't come cheap though. Expect to pay at least £55 for it on import.

Eugene Lacey

ESWAT

Megadrive imports turn up the heat

ESWAT stands for Enhanced Special Weapons and Tactics – a crack unit of the future police force, trained in the most advanced weapons and counter terrorism practices.

In this conversion of the popular arcade game the ESWAT division are pitted against six crime bosses and their powerful forces. Before you can join the elite ESWAT squad you must first prove yourself as an ordinary policeman doing battle with the crime syndicate troops armed with a simple hand pistol.

If you make it through this preliminary test you will be introduced to the first of the special equipment. Superbly drawn and reminiscent of Robocop, it provides greatly enhanced fire power and takes the form of an armour suit which straps on in sections. Picked up, the chart at the bottom shows the type of equipment selected and what is left to be done.

As well as the armour suit the ESWAT policeman must also collect enhanced weaponry power-up icons and ammunition icons. You will need every last ounce of fire power to defeat the

increasingly tough crime bosses. Each boss has a unique style of attack and requires different strategies to defeat.

ESWAT is a bang up to date arcade game and its Megadrive implementation is kussing close to the coin-op original. A summer blaster of unquid-downable playability.

CDTV SWITCHES ON

With the launch only a month or two away, ACE talks CDTV software...

THE CULT OF THE SEVERED HEAD

CRL get gruesome

CRL stole a march on most software publishers by developing their EGADS utility, later rechristened DUNE. The system enables a designer to script and develop hypergame scenarios (see ACE issue 30) for CD and computer without programming skills. It works by linking mixed-media files (sound, graphics, and routines) together to build a complete scenario that is then driven by clicking on 'buttons' - areas of the screen that lead one into a new sequence or effect. Combine this with the use of icons and animation sequences and, in theory, you could put together a pretty complex beast without a wavy having to code a single byte.

CRL's first DUNE release, *Herewith the Cloes*, already covered in ACE, is being converted for CDTV and is broadly similar to the original Amiga version but with enhanced graphics. *The Cult of the Severed Head*, however, is their first dedicated CDTV DUNE product.

Developed by Nicholas Gardiner, the game is the first in a proposed series detailing incidents from the casebook of Nathaniel Tallantire, a vic-

This pretty map will be the Cult of the

arionised Reverend who is the senior axorist in the Church of England. The story starts in 548C when one Galabus sought to save reftreating Druids from the Roman army by conjuring an evil spiritual manifestation generated by human sacrifice. The Druids aren't overwhelmed by gratitude when he succeeds in saving them and imprison the demon before killing Galabus. As magical chaps will do, however, he resurrects and teaches his tormentors a few lessons before disappearing into history.

By now the mention of severed heads and human sacrifice will have alerted the knowledge-

JAPAN WORLD

The first step in any CDTV campaign to other multimedia devices has led to its being used for a unique development in Derbyshire.

Toyota recently decided to build a £700 million car assembly plant in the county, and the local council wanted to educate the locals in matters Japanese. What better way to do it than produce a multimedia educational package?

Global Learning Systems are producing the package, called *Japan World*, and Central Television will be providing facilities and technology to help produce the software. The package will then be supplied to local institutions complete with a CDTV to run it on - the hardware will be sponsored by Commodore.

Japan World demonstrates that CDTV will indeed open up entirely new areas of application. Stand by for fireworks when the entertainment industry really gets their teeth into it.

Abel: A close-up of the objects that appear in different forms in *The Cult of the Severed Head*.

able to the fact that GRL are up to their old tricks. Having braved industry scorn with their earlier horror releases (*Jack the Ripper*, *Dracula*, and others), the company are now drooling at

"We are breaking through old barriers with these products. We are taking computer entertainment into new, exciting territories with new ideas, new technology, and a new approach."

GRL's Michael Hodgson in ballball mood

The game will make full use of the CDTV's IR controller, boasts 4096 HAM 4096 screens, text vocalisation if required, hypertext descriptions (i.e. you can click on passages for more details or developments), and stop frame claymation. In addition, up to 250 photographs of the actual district where the action takes place will be included in the game.

It all sounds well, rather horrible. We can't wait for the review copy!

STAND AND DELIVER!

Here is a quick run down of the interactive Dr Feelgood

PERSONAL HEALTH

- Healthy living - diet, exercise, fitness, substance abuse (including alcohol and smoking), looking after your heart, psychology
- Self examination - regular self checkup procedures
- Adult health - personal/sexual problems
- Sex on citizens - childhood health
- Health test - general health test
- Dental health - explanation and preventative medicine
- Alternative medicine - types and descriptions

FIRST AID

Basic principles, medical emergencies, major techniques, general skills

TRAVELLING ABROAD

Familiarise yourself with the world, listing information about associations, medications, mandatory medical requirements etc. climate (time, weather, rainfall, humidity, altitude - fall year), tailbait (clothing, local hazards, amnesia, etc) procedures. Add them before you go! advice

DIARY

Simple diary to note medical appointments, vaccination results, child assessments etc

EMERGENCY

Immediate facility to jump into any specific part of the system

DR FEELGOOD

DIGITA help you deliver...

You've just come back from work to find your girlfriend giving birth in the kitchen. Do you call a doctor? No, like the man you are you boot up Dr Feelgood on your CDTV, invoke the Emergency Facility, and follow the simple on-screen instructions. Gooops... sextuplets...

Seriously, however - OK, sextuplets are VERY serious - seriously, however, Dr Feelgood is an excellent example of CDTV development. It aims to make maximum use of the audio and visual capability of the machine while at the same time offering improved user control in an application that must surely have universal appeal.

Not strictly entertainment, we agree - although a family doctor program with sound effects would seem to have enormous entertainment possibilities - but Dr Feelgood gets an ACE mention because it shows how a utility application using new technology can overlap with the leisure market because of its interactive nature.

For example, apart from delivering kids, checking up on your teeth, and carrying out emergency first aid, Dr Feelgood also contains interactive procedures to give you advice on diet and fitness, foreign travel, and exercise. For the hypochondriac it's an essential purchase because it uses a keyword system to provide a dictionary of symptoms and conditions.

On a more serious note, the 'Emergency Facility' mentioned above enables you to jump straight into a specific area of the program if circumstances demand immediate action. There

HEALTHY LIVING

Digital's user interface mixes text, graphics, animation, narration, music and - quiet - sound effects

are five main areas within the system: personal health, first aid, travelling abroad, obstetrics/infant growth, and a simple diary.

Developed over 2.5 man years, Digital claim that 'enormous research and design has gone into a specific user interface so that the program can be effectively controlled using the hand-held CDTV remote control'. On one reservation so far is that it doesn't seem to provide a full-scale surgical instruction module. As well, guess we'll have to continue to make do with Life and Death. More clinical details next month.

WHAT PRICE FMV?

The 1988 program, the first utilisation of CD-ROM technology is the potential for full motion audio - movies, effectively, on compact disc. Current research has shown, however, that FMV may not be as important as previously thought.

Virgin, who have extensively researched FMV previously during their involvement with the North Polar Expedition interactive video disc, have actually discovered that lengthy periods of animation induce a 'sleazy palace' affect, whereby the user relaxes into a quiescent state. Watching the movie and losing interest is the intention.

This affect has been confirmed by other developers, who are beginning to realise that the active sense of involvement users feel from an interactive scenario is different to the more passive involvement felt while watching video sequences. Virgin found that useful lengths of animation within interactive scenarios could be as little as 1 to 2 seconds long, allowing sequences to be animated from RAM without the need for a swap frame from the CD.

This is all well and good, but FMV may be longer in arriving than we thought. Although Philips and Sony are claiming that CD-i, due to launch next year, will be delivered with FMV capability and Commodore say they will be proud to say as FMV adapts to CDTV the reality appears to be slightly different.

The difficulty has arisen for two reasons. The core of the problem is simply that most audio stills generate up to 300K and need to be animated at between 18 and 30 frames a second - whereas the CD can only transfer 150K in that period. At a worst case scenario (500K stills running at the NTSC standard of 30 frames a second) that means that each screen will have to drop from around half a megabyte to just 3K!

There are two possible solutions to this. The first is a hardware solution: design a dedicated compression chipset that will do the job for you and can be built into all the machines. Unfortunately, this requires an exact standard to be defined otherwise different machines will end up demanding a compatible file format. The Motion Picture Experts Group (MPEG) is currently getting together to define a Digital Video Standard, but the spec isn't likely to be published until later in 1991 and then it will take a couple of years for chipsets to be designed and produced cheaply enough to be useful. A current hardware solution (DVD) from Intel, cost \$2000 for the chipset alone - you still need your CD system to go with it.

The second possible solution is to do the whole thing in software. Previously this was reckoned to be impossible, but there have been enormous advances in recent months in compression technology and it is conceivable that software might ultimately provide the answer.

With so many people chasing the solution to FMV along different paths, expect a wait at least five years before FMV CD systems become widely available.

A THOUSAND WAYS TO DIE...

**TRULY MASSIVE
GAME, INCORPORATING:**

- * 3 man years of development
- * 7,000 frames of animation
- * 140 hero actions (1,500 frames of animation)

- * 18,000 individual pieces of graphics.
- * 600K of music & sound effects.
- * 8 megabytes of code & data.
- * Over 80 screens of non-stop action, interwoven with devious puzzles.

...BUT ONLY ONE WAY TO STEAL...

For 400 years, no-one has dared to take up the Quetzalcoatl's "Gold of the Aztecs". Bret Central's special forces training and combat duty have made him a way of life. This time the odds are really stacked against him - and you, in one of the biggest, most fascinating games ever devised!

Never before has such a massive amount of gameplay and graphics been packed into a game.

VISIT THE LAND OF THE AZTECS!

We think this game is one of the toughest action adventures ever devised. That's why we're giving away the trip of a lifetime to visit the Land of the Aztecs in Mexico - Summer 1991. To win you have to beat all-comers in **THE GREAT AZTEC GOLD RUN!**

(See inside box for details)

Screen shots are only intended as a measure of the game play and are not the screen graphics which vary considerably between different machines. It is strictly and completely subject to the company's specifications.

CadaverTM

Deep in the heart of darkness lies a swamp. In the centre of the swamp there stands a castle. And deep inside the castle the Necromancer waits.

His history is steeped in blood: A feud between the kingdom's heirs, a battle won by magic and a massacre that stained the battlements red with blood. In the aftermath many adventurers tried to unravel the enigma. None returned alive.

But fate has nurtured a hero. No valiant knight or swarthy soldier but a liar, a mercenary and a thief. Karadoc the dwarf is destined to go where men have failed, to come face to face with the Necromancer and probe the darkest mystery known to man. His motive? Not honour or love or a personal feud, not a crusade against evil or a deep hatred of Necromancy, but treasure! And Castle Wulf is bursting at the seams with it... Cadaver is the interactive fantasy adventure you've been waiting for. Stumble through a labyrinth of age-old passageways, explore the mystic contents of Wulf's secret rooms, battle to the death with hideous monsters, grapple with supernatural traps and puzzle over the enigmatic spells of Necromancy.

- A complex interactive game environment with hundreds of different rooms and locations.

- Mind-bending puzzles.

- A wide variety of available weapons.

- An array of spells and mysterious magic potions.

- A vast menagerie of monsters, including mutated rats, man-size water lizards and gigantic fire-breathing dragons.

Cadaver – survive it and it's an experience you'll never forget.

SPECTRUM

ESCAPE FROM THE PLANET OF ROBOT MONSTERS

Domark/Tengen £9.99 £12.99; Atari ST version reviewed Issue 32; ACE rating 880

ESPRM has finally arrived for the Spectrum, having already been reviewed for all the other major formats. Escaping from the robot-infested planet, you have several tasks to perform along the way, these forming several subplots to the game. These sub-plots include freeing human prisoners (who are staying away in the factories that you travel through), fighting the robots, and on every third level using your collected bombs to kill an evil rebelian.

Something that is lacking in these 8-bit versions is the motion of the space mobile maze, which gives a good variety to the 16-bit versions of the game. The graphics are in a luscious shade of pink and black and the sound is reasonable. The game plays in a similar style to the other versions and almost manages to retain the pace and atmosphere, but the result is definitely a less addictive experience.

SPECTRUM RATING: 700

Domark / Spectrum

KLAX
Domark;
£9.99; £12.99;
ST Version
Reviewed
Issue 32; ACE
rating 895

Practically everybody in the world must have played Tetris, and now a new game in the same genre has arrived for the Spectrum. In this game you have to arrange the blocks that you catch on your 'paddle' and then build them up in groups of three of the same colour. These groups of three blocks (Klaxes) can be horizontal, vertical or diagonal.

When you are asked to collect 3 horizontal Klaxes in the third round you will find this a very difficult challenge. But once you pass this level you will be able to cope with most of the other challenges you are faced with in the game. The colours of the Klaxes can however become almost indistinguishable when the blocks are coming at you at speed which is infuriating at times. As in Tetris, simplicity rules OK.

SPECTRUM RATING: 820

PIPE MANIA
Entertainment;
£9.95cs £14.95dk;
Amiga Version
Reviewed Issue 31;
ACE Rating 910

In this popular puzzler, you are a plumber and must place lengths of different shaped piping so the 'Flood' keeps flowing for as long as possible. To complicate matters objects are scattered around the screen to block off your ideal route. Also the piping pieces are given to you in a set order so you need to be quick thinking to optimise the use of each one. To get over the obvious problems caused by this you can place a piece of piping over another piece.

This is called 'Bombing', but it takes longer than placing a pipe on an empty space and time is of the essence because the Flood is flowing. Dumping pieces by placing them anywhere on the screen doesn't help either because at the end any extra pieces are counted up and points are deducted from your score. As you get further into the game you will find it very challenging but as you progress through levels you will be given a password so that you don't have to go all the way back to the beginning each time you lose at a high level. Not a difficult game to convert downwards, and a highly addictive scenario.

C64 RATING 910

Domark / Spectrum

AMSTRAD

E-MOTION
U.S. Gold; £4.99 10.99;
Amiga Version
Reviewed Issue 32;
ACE Rating 890

An original product involving balls and bars. This game has you in control of a sphere with a triangle in the middle of it which you use to manoeuvre about the screen, colliding with other balls. The objective is to make other balls of the same colours crash into each other. They then disappear. To complicate things bars are placed on the screen to send the on-screen balls flying across the screen when they hit each other. The bars can also trap balls of different colours. When two balls of different colours collide then a small ball of another colour is produced. If you collect this quick enough then it will act as an energy pad, colliding with which will boost your energy levels. Leave it too long, however, and the new ball will become a pulsating sphere which will explode - the same applies to all of the other balls if not cancelled out by one of the same colour. The only difference with the Amstrad version is that it has no coloured background and is not ray traced. Yet another addictive game based on a simple idea and destined to be a hit.

AMSTRAD RATING: 837

Domark / Amstrad

COMMODORE 64

FOOTBALLER OF THE YEAR
Gremlin; £9.99cs
£14.99dk; Atari ST
Version Reviewed
Issue 31; ACE Rating
670

The World Cup has passed and still football games are hitting the shelf. This game has you playing in a host of national and international matches. In this version, however, the actual games take place in an area only slightly larger than the goal area - very restricting at times so the whole games effectively revolve around shooting at goal.

To improve your score you can buy goalcards if you

follow a set plan. Also you can play trivia games to increase your bank balance. Then at the end of the season if you've scored the most goals you should have the Footballer Of The Year.

The graphics are scarcely worth a mention with stick men for footballers. The sound hardly exists during the game and what there is is poor. Despite all this, the game is actually quite enjoyable at first, but after a few goes you get tired of the small playing area and look for something else.

ATARI ST

THUNDERSTRIKE
Millennium; £24.99; PC
Version Reviewed Issue
35; ACE Rating 885;
ACE Graphics Award

The first thing that strikes you about this futuristic flight and light game is its speed. Compared to a flight sim such as F19 or F16 where the scenery scrolls at a fairly reasonable pace, in *Thunderstrike* your ship, with added turbo boosters, positively scorches across the screen. Even better are the amazing solid 3D graphics and the ship's responsive handling, only let down by the sound department.

You are appearing on a TV show where you have to defend your home base from a whole host of enemy rebelic craft. Certain ships leave behind energy pods, turbo boosters and shield enhancers when destroyed, which you can collect by simply flying over them. As it's a TV show the better you perform and the more dramatic your performance is determines what type of ship you get in the next round.

One of the main pluses of the game is that the game is very easy to play and get into (unlike many flight sims) and this certainly helps the addicton level. A slick, sophisticated shoot'em up.

ST RATING 885

Thunderstrike / Atari ST

Infestation / Atari ST

INFESTATION

Psygnosis; £24.99; Amiga Version Reviewed
Issue 32; ACE Rating 720

You have been placed on the planet Xelos and MUST rid the space station Alpha 2 of its alien invaders. To do this you have to close in each of the alien eggs and poison them with your cyanide gas. Also you have to destroy the alien droids and the mother alien.

To achieve this task you have to manoeuvre around the planet and the space station either by foot or by the MMU (Manned Manoeuvre Unit). There is a wide range of objects to be found and identified – for example, you have to identify lifts and computers and other items otherwise you will get nowhere in the game. Once you have worked out the basics, you'll find that this is as much a game of exploration as it is of shooting aliens and destroying eggs.

There are a large number of floors and rooms to be explored so Infestation will be kept off your shelf for quite a reasonable amount of time. The graphics are adequate but without pushing the computer's capabilities. Tough at first, but the map and the playability seen grow on you.

BETRAYAL

A WEB OF INTRICATE POSSIBILITIES - BUT FAIR PLAY ISN'T
ONE OF THEM

MASTERS OF STRATEGY

A WEB OF INTRICATE POSSIBILITIES - BUT FAIR PLAY
ISN'T ONE OF THEM

BETRAYAL

The West Marches is a corrupt land ruled by immoral leaders. You are one of four Knights with a lust for power. And in the pursuit of power, the end justifies the means.

The bloodiest battles yield the greatest spoils. Strategically extend your domain, reduce your rivals' resources, and tighten your stranglehold on the peasants of the land.

The towns provide your power base. Manage them successfully and harvest the wealth needed to buy, bribe and fight for ultimate power.

Betrayal involves a long, hard, ruthless struggle, starting with the economic management of your towns and cultivation of your lands, culminating in the honing of your military strategy and execution of political subterfuge.

Develop a mastery of political subterfuge, gaining pluses for your Courtiers at the palaces of the King and Bishop, ready for the coup which will make you the master of Betrayal.

BETRAYAL A HELL OF A GOD GAME

A new barrel of fine Welsh ale had just been breached. The royal palace's smoky dining hall resounded to cheery voices. To one side of the top table a harpist and a minstrel were struggling to be heard above the commotion caused by two dogs snarling over a bone in a corner.

Eating slowly, I lean forward to catch the breathless whisper of a rival knight.

'They came in at a run, baying like wolves. Four wild-eyed barbarians ready to cut, gauge, pulverise and kill anything that moved.'

That news was indeed music to my ears. My forces' attack on his wealthiest town had met with success. Financially weakened, militarily broken, and politically bankrupt, he could no longer hold influence at Court.

So long as no evidence of my wrong doing remained. So long as the Gods blessed the crops of my harvest. So long as the rumours of the capture of my brother were true. The throne was mine.

I've created, used, spoiled and slaughtered. The fruits of Betrayal are mine.

THE KILLING GAME SHOW

THE KILLING GAME SHOW...

WILL HAVE YOU CLIMBING THE WALLS - IT'S THE ONLY WAY OUT!

Suited in limited-protection armour you're the unwilling contestant on THE KILLING GAME SHOW. In front of a TV audience of millions you must battle your way to the top of 16 Pits of Death Infested with Hostile Artificial Life Forms specially created by THE KILLING GAME SHOW's manic scientists to give you a hard time.

But... don't forget the rising fluid or it's "next contestant time".

You must give the viewers their value for money — collect the awesome weapons and tools — If you can!

First prize is your life — Don't waste it!

DRAKKHEN

THE COMPLETE GUIDE PART TWO

A quick recap: In August's exciting episode Adam Morley took us through the initial stages of Drakkhen but, alas, he took us into the Temperate Zone where a dragon landed on his head. Ouch...

The saga continues...

Adam quickly beat up the dragon, got up and brushed himself off. Then very casually he continued giving us his Tips on the world of Drakkhen.

TIPS FOR FISTICUFFS:

Engaging the hostile inhabitants of the Drakkhen Isle is the best way of improving your experience, as well as gaining armour, weapons and other items. At the beginning of the game this is easier said than done, as most things seem far stronger than you. In order to help you to determine whether to sland and trade punches or flee with your tail between your legs there follows a list of creatures and how difficult they are to defeat.

● **Hunchback Guards:** At first these are difficult to defeat and should be handled by your warrior and scout, if possible.

PRINCE HAAGGKHEN
Prince of Water

At last!
The continued
exploration and
conquest of
Drakkhen and
Xenomorph,
plus codes for
Astro Marine
Corps and
Flood...

Tricks 'n' Tactics

Where the Drakkhen Prince and Princess's are found

Locked Doors

Pools of Water

Locations of Armour and Weapons

Chapels

Rooms which contain items; spell books, rings, sceptres and vials

The location of powerful foes such as Lords and Knights

Doors with nasty teeth

KEY

● **Lizard Guards:** These are easier to handle and often yield bucklers and simple weapons. Low level magic users should still avoid them.

● **Drakh Soldiers:** These are like the lizard guards but with spiky armour. For level one characters these are hard to handle and should be dealt with by warriors.

● **Bubbling Slime:** A poisonous annoy-ance which can be dealt with.

● **Blue Snakes:** These are quite easy to kill and yield a large number of experience points. However, they may poison a character during combat, and these should be dealt with by the priest using his second spell.

● **Scorpions:** Again, these creatures are hard to kill at first, and will usually poison one of your characters. Let your priest heal this quickly.

● **Large Snakes:** As with scorpions, although slightly easier to kill.

● **Drakh Knights:** These are large creatures wearing orange cloaks. At first they are extremely hard to defeat and should be avoided until your warrior is at least level two or three.

● **Flying Wyverns:** These come in all shapes and colours and are fatal to all low level characters. They do, however, yield powerful items and high experience points.

● **Meaning Undead:** These skeleton apparitions are quite a handful for some time, but can be killed with either brute force or spell number eleven in the booklet.

● **Laughing Devils:** These little jokers are very dangerous even when your characters are up at level three or so.

● **Centaurs:** Violent and dangerous, these creatures should not be fought unless you have strong, well-armed players.

● **Rock Monsters:** These have a wicked punch and can only be damaged by strong characters with good weapons.

● **Drakh Lords:** These are tall creatures with fancy orange-silver head-dresses. They are extremely powerful and can paralyse your characters with magic. Treat with caution!!

● **Giant Trolls:** These creatures are found in the more hazardous palaces and are extremely dangerous and strong. They can take and give many hits. It is best to send one powerful, missile character to attack them.

● **Dragons:** These mainly appear in the Desert and the area around the Firestones. They are deadly and must be defeated as quickly as possible.

These creatures are listed in order of increasing difficulty. Those at the bottom end would overwhelm new characters without a blink, and even highly experienced characters, up to level eight and nine and beyond will find them testing. After defeat, powerful foes it is a good idea to save play at that point to guard against losing valuable experience points.

ITEMS OF POWER:

During exploration you will inevitably come across rings and sceptres, as well as various potions. These rings and sceptres usually enhance one of your characters' stats, or give them a special ability.

Rings: Invisibility, Impairability, Recuperation, Power & Understanding. There is also one which, when worn, appears to do nothing, however, it actually doubles the hits your character gives and is thus very useful.

Sceptres: As with rings.

Weapons: Daggers, Budgeons, rods and swords are the basic weapons. However, large swords, Bomstars, Bows (arch) and Drags are also obtainable - usually from the higher level creatures. Weapons with extra power range from +1 to +3.

Suddenly Adam stops his lecture. "LOOK OUT!" he shouts. We all duck as a mutant cucumber leaps at them. Time in next month for Drakken- The Complete Guide Part Three "The Quest for Tears".

WINTER

(AMIGA)

Quick tips, thanks to G. Vandome from Northern Ireland.

AT THE START OF THE GAME:

You are on skis. Don't stop to snipe. Get as quickly as you can to the nearest garage. You need missiles against the bombers. Try to get a Wolf snow-buggy. You can dodge the mortars on skis the same way as on a buggy: turn quickly 90 degrees and speed off. If you stop to snipe the mortars will get you. When you get the snow-buggy speed to your next point while blasting the bombers as they appear.

FOR INVULNERABILITY

Against missiles: Whether you are sking or driving a snow-buggy, the moment you hear the missile being launched, stop immediately and begin to turn around. Keep turning on the spot. The missile will narrowly miss you then come back and keep pace alongside you for a while until it finally speeds off to clobber someone else, not so smart.

Against mortars: Watch for the bomber. It will always come over the horizon in front of you. If you are stopped, wait until it is approximately half way to you (other wise it may be able to dodge your missile) then blast it. If you are moving fast blast it the moment it appears over the horizon. If a bomber does manage to drop mortars turn 90 degrees quickly and speed off.

JNT SURVIVAL GUIDE

Part 3A of Jen's Hacking Guide.

In order to give you the WHOLE of Jon's third hacking guide, without cutting it to pieces, we have split it up over the next few issues, sorry Jon!

Gradel cheat:

Okay then, so what did I want to do to Citadel that I didn't do to Bombuzal? Well, I wanted to have more than just a puny reprogrammed space bar and immunity and I didn't want to waste time by removing what I class as bugs (inboud the one on the title screen? Go through the attract sequence using the space bar). Basically, what I had in mind was "better".

O.K. mystery lovers check out the plot, weigh up the evidence and see how quickly you can work out how the final cheat will look! As I weaved my naive, nonchalant path through the Gelhic architecture, something struck me that made me feel uneasy: I could lose energy, worse still, I could die. Luckily I was gifted with the same amount of lives as one

third of a cat, which was just enough to prompt me to shut up and get on with the cheat.

Firstly, a quick explanation: I talk a lot about removing routines and instructions. It isn't possible to have a void in memory, so removal normally entails telling jumps to carry on to the following piece of code, so it does nothing, or jumping around routines. I could just as easily change the code to give you an extra life every time you die but that is hardly necessary.

As usual I will start the day by finding unlimited energy. There are only two areas where the energy you lose is always the same, when you get hit by a bullet and when you crash into an alien. Because you lose four energy for both of these I could have looked for code that subtracted four away from things. Instead, I looked for code that subtracted anything.

Ooops. I got a whole list of subtracts but none of them subtracted four. There is a simple technical reason for this connected to the string of bytes I searched for, so I wasn't concerned. I systematically removed and tested all the subtracts, hoping to find something useful. Eureka! One of them gives infinite lives to the players drone. I also found some suspect code that subtracted zero, effectively doing nothing.

Oh dear Martin, you've said self modifying code, and after saying how naughty it is (self modifying code can directly change itself to mean something different, a very questionable technique indeed!) I tested the new found subtracts and found that they executed as the traps opened (sounds like something worth coming back to me, but not just yet).

Using a more direct method to find the subtracts I was looking for produced results. With them came another two that executed as the player changes levels or sides - nothing to do with energy loss but I shall return to them later as they can put me onto the trail of bigger things.

THE ACE GUIDE TO SOLUTIONS!

A recent letter from Ben Halifax said the same thing as hundreds of others, namely requesting a list of guides and solutions that we have printed before and their respective issue number s. (Unfortunately, short tips are not included). So here it is - a comprehensive guide starting from issue 29!! (We aim to please).

ISSUE 29

Dungeon Master Guide (part one) - Les Ridgen
AD&D and Bard's Tale - Colin Taylor
Batman-the Movie - Adam Morley

ISSUE 30

Dungeon Master Guide (part two)

ISSUE 31

Space Ace - David Williams and Chris West
Dungeon Master Guide (part three)
Future Wars - Phil Thompson

ISSUE 32

Dungeon Master Guide (part four, final part)
Coniolete guide to Y's - Jojo Cicero and Mark Creek

ISSUE 33

No guides or solutions, but leads of shortcuts

ISSUE 34

Castle Master - Incentive
Midwinter - Microprose
Guide to hacking on the C64 (part one) - Jon

ISSUE 35

Drakken Guide (part one)
Adam Morley
Xenomorph (part one) - Alan Costes
Guide to hacking on the C64 (part two)

ISSUE 36

Defender of the Crown (mini players guide) - Paul Thomas
Lots of shortcuts

ISSUE 37

Drakken (part two)
Xenomorph (part two)
Guide to hacking on the C64 (part three)
The ACE guide to solutions.

The drone and I could now roam through the citadel without being killed by nasty aliens. The laser doors don't take off energy however, they just kill you outright. I looked at the code that took hit points off the monitor - if your energy falls into the minus region a branch is taken to another routine which instructs the rest of the program to go through the death sequence. There are only two branches to the death routine to death from a laser door must jump straight to it. I was right, removed the jump and hey presto...immortality.

HEAVIER METAL

It doesn't seem very fair to start with such a feeble weapon, it would be much nicer to have something more powerful. There are only two things that happen in the game that could start me on the trail for the location which determines what weapon the player owns. The first

Cruised on the C64 - it's better explained by you

is the sound effect when you collect it but that sound effect can mean many things. The second is the on-screen indicators in the panel. I'll use that.

I need to find exactly where in memory the number in question is. I need three values. The first value is a location which tells me in which, out of four possible blocks of 16K, the screen lives and the second is where, in 16 possible blocks of 1K, the screen lies in that 16K area. The third is how far down the screen the weapon character lies. Knowing that the start of the screen is also the start of the 1K memory area mentioned earlier, I could calculate the position of the weapon character (understand?).

I found three stores to the location I got from the above calculations, the first was the one I was looking for, the second store I found made the third one a waste of memory because it was just a repetition of something the second store had already done. Nearby the first store, was a load from the location that held the weapon number. As I have been doing on all occasions, I jotted down appropriate memory locations along with various notes and continued onward.

Time to find out how to use the sound effect generator. A simple job, I just looked around the memory area where the lasso actuator program was and it wasn't far from sight. I wrote a little program to play through all the sound effects and noted down the values of any interesting ones (along with explanatory notes like "Wroww", "Bedoo" and "Boothoo"). I paid particular attention to the monitor's engine noises. I also revealed some more bad programming: a store to make sure a location held specific value, sadly the location was never affected by any thing else, so the store was pointless.

(To be continued next month, together with listing...)

CONSOLE CORNER

We apologise for the small Console corner this month. Please keep sending us your tips for the consoles.

BATMAN

NINTENDO GAMEBOY

from our old friend Dave Wilks

Batman is one of the most enjoyable games to appear on the Gameboy yet, but it's even more fun when you know what to do! The Japanese instructions aren't very helpful, so here's a helping hand.

When faced with a particularly high or long gap, it is important to remember that holding down the jump button will make Batman jump further. For the longest possible jumps, you have to keep holding the button down until he lands on the other side. Batman can also change direction in mid-air; any bonus which seems impossible to get can usually be got by jumping off the end of a platform, and changing direction after collecting it, to fall back on the platform.

Remember, you must keep the button held down, otherwise you won't get back again! See Diagram...

Here's a run down of all the bonuses:

- B - Bonus of 5000 points
- L - Batwing speed increase (MAX 6)
- A - Batarang
- S - Shot (limited range - not very good)
- N - Shot (long range)
- W - "Wiggly" gun - can fire through walls
- P - Power shot - similar to above but does not oscillate up and down
- T - Laser

- Smoke - Smart bomb
- Batheed - Extra life
- Batwing - Rotates around Batman and acts as shield (4 MAX)
- Heart - Extra energy
- Gun - Weapon power up
- Inverse Gun - weapon power down

Killing the Joker at the end of level one is very easy; start by shooting him three times and then run back to the far right of the screen. Turn and keep firing, and when the Joker jumps for the second time, run under him to the other side of the screen. Keep shooting at him, and when he gets close jump over him and run to the far right again. Repeat this pattern until he dies.

OH YES...

Don't forget to switch off the Powerbase of your Sega Master System before inserting a cartridge, you have been warned!

RETURN THE COUPON FOR FREE COLOUR BROCHURES!

NEW! - AMIGA PACK

C-Commodore

AMIGA

Commodore A500
Flight Of Fantasy

£399

A500 BATMAN PACK

The Commodore A500 Batman Pack really takes you into the most popular comic pack ever! The pack includes the Commodore Amiga 500 computer with mouse, serialiser and TV extender, plus two software titles. The software includes: **Batman The Movie**, **The Gotham City of the Evening Paper**, **Queen's Top Selling Story** based on the blockbuster Batman film, **New Zealand Story**, high quality computer of the leading arcade game **Interceptor**. **Doyle with two F-16's** in the winning **Flight Simulator**. **Deluxe Paint II**, 100 quality Amiga graphics package which get the standard of 400 colours to 1000. Return the coupon for SUPPLY DETAILS.

PACK INCLUDES:

- A500 TV Modulator £24.95
- Batman The Movie £24.95
- New Zealand Story £24.95
- Interceptor £24.95
- Deluxe Paint II £24.95

TOTAL RRP: £149.70

Less Pack Saving: £100.70

PACK PRICE: **£399.00**

£399 INC. V.A.T.

AMIGA 2000

For the more serious professional applications user, Commodore have a selection of systems based around the professional Amiga 2000. At prices from £2295-£4000. The A2000 features a full 1MB RAM (expandable to 5MB), a system expansion slot, plus IBM compatible with the use of PC-XT or PC-AT. Professional. Complete and return the coupon cutting a hole in the Amiga 2000 box, for details of A2000 computers. **£1295** INC. V.A.T.

FLIGHT OF FANTASY

Flight of Fantasy is the very latest Amiga 500 pack from Commodore, featuring 30,000 NEW software releases. It's just the most spectacular A500 pack ever! The pack features the Amiga 500 computer with mouse, serialiser and TV modulator, as well as two top software titles. These include the following:

CHUCKY CHUCKY II

The top quality graphics package that will be the standard for other Amiga packages. **Deluxe Paint II** includes powerful drawing tools, a text editor and a word processor. **Contra** creates a new perspective, 30 perspectives in just 1000.

FLIGHT OF FANTASY

Have a complete, complete software package that will be the standard for other Amiga packages. **Deluxe Paint II** includes powerful drawing tools, a text editor and a word processor. **Contra** creates a new perspective, 30 perspectives in just 1000.

F20 RETALIATOR

The Amiga's flight simulator with a choice of four or eight jets. Two jets per formation with a choice of four or eight jets per formation. **Deluxe Paint II** includes powerful drawing tools, a text editor and a word processor. **Contra** creates a new perspective, 30 perspectives in just 1000.

PACK INCLUDES:

- A500 Compiler & Mouse £209.99
- A500 TV Modulator £24.95
- Deluxe Paint II £24.95
- Chuckychucky II £24.95
- Flight of Fantasy £24.95
- F20 Retaliator £24.95

TOTAL RRP: £364.82

Less Pack Saving: £140.82

It's a world gone mad!
Bombs drop from the sky,
playing havoc with the
natural order of *fat Filbert's*
verdant land. *Filbert's* got to see to it that
every square foot is set back to normal - that's a lot
of work for our rotund hero. The trouble is, the bombs
keep on coming, spikes, acid and ninja balls keep inter-
fering and there's not much time left to get the job done.

Fear not *Filbert*! Throw the tin cans, pick up the potions, drink the tea
and you may just manage to clear up the situation. And don't forget, if the
going gets too tough you can enlist the help of a friend and work as a team
- just try not to get in each other's way!

- 128 isometric 3D screens of manic action
- avoid the bullying red vikings, trees, robots and nasty ninjas
- simultaneous two player option
- customise your own games
- 3 game modes - competition, puzzle & the real thing
- 10 different musical soundtracks

Atari ST & STE £24.99, Amiga £24.99

MILLENNIUM

THE BONANZA BROTHERS will find great favour, with its slow-paced thoughtful action and a Nintendo-like graphic style. Highly enjoyable.

Robert the Bruce, some of Active, exhibiting his new kit and JAMMA-compatible home arcade deck.

RACING HERO is the latest Sprint Master from Sega, being a quality motor-cycle game, required to be very challenging in the later stages. Nice game, but you might prefer the breath-taking movement of Ivan's WWF.

WE'RE JAMMIN

The latest arcade releases plus news of how to play real arcade titles in your own home - John Cook reports...

Active Sales is a well known company in the trade, who considerably upped its public profile recently by marketing PC Engines adapted for use in the UK. Now those same cuddly binomes have come up with an idea that tells you - the General Public - play existing arcade titles, 100% genuine, in the comfort of your own four walls.

Available in software shops from mid-September onwards, Active is at great pains to emphasise that this unit is not a games console, but a genuine home arcade machine.

There's no doubt about that, as the unit, 5'2" tall by 23" square, is an adaption on an existing arcade cabinet manufactured by Silverline, well known in the arcade trade.

The unit itself is an upright cabinet, with the usual two joystick, three fire button configuration - but with one difference. No monitor! You supply the monitor - which neatly fits into the top of the cabinet, accommodating up to a 20" screen. The outputs available are SCART, RGB and PAL - suitable for almost any CRT you will have available.

What do you do for software? You use JAMMA compatible PCB boards - the arcade industry standard. All the games you play in arcades which are not dedicated, sit-in units are powered by JAMMA boards, so in theory, you could play any of the genuine articles - but you wouldn't have to 'pay to play'!

However, rather than let everyone loose on

YOUR SEAL. Lastly, a new PCB from Data East who has been on being recently. Also Dark Seal brings that sequence in and - an isometric globe with little to command it, despite perfectly workable presentation. What makes the difference between this last effort & something like the Magic Sword from Capcom (reviewed next month)? If we all know that, we'd all have second homes in Nintendo, wouldn't we?

the bare JAMMA circuit boards, Active are encasing them in rigid plastic cases, which also ensure that you plug it in the right way, vital for continued functioning of the board, the unit and you!

The cabinet will come already with a game plugged in and the price, not fixed at present, will be from £300-340.

The upside is that you can play the real thing - absolutely 100% authentic arcade games with no modifications or compromise, because it's exactly the same software/hardware configuration. The downside is the software and the price. New JAMMA boards (say Raiden in this issue) sell in the range £500-800. Ouch! The thing is, the older the game gets, the cheaper the board... as the arcade owner's trade in/sell off old boards which are now bringing in less money, for the newer games.

Therefore, Active has at least 10 games for sale at under £250, like Ghosts and Ghouls and Silverman. But bear in mind they'll be second hand, albeit reconditioned, and Active can only supply a three month guarantee on any one board. You name the board, however, and they'll quote you a price for it - or if you are technically competent, you could search the small ads of the arcade trade rag, Coin Slot, for bargains.

For more arcade enthusiasts with money to spare, there's no doubt that this is the real thing - and there'll be a ready supply of JAMMA boards for the foreseeable future, either encased (from Active) or via the arcade trade - in other words, it's a must!

The more casual gamer, however, must be aware that purchase of a console, such as the Sega Genesis/Megadrive, is cheaper and will allow you access to damn good imitations of the latest games at around £30-40 rather than the pure authenticity of the JAMMA board at over ten times that price.

ALIEN STORM. Sega has been busy again this month. Alien Storm is a fine horizontally scrolling shooter that uses the same graphic style as Golden Axe. But please even more in highly recommended, but be aware that having a tetrahedron like creature into a shiny alien lifeform before your eyes may well lessen your grip on reality.

RAIDEN. High on the PCB chart is Raiden - another vertical scrolling Tiger Shark clone. Does the word 'must another of these games?' You, the partner, keep putting the money in the slots, so apparently the answer is, yes!

A further instalment in
our occasional series on
classic games...
John Minson puts his
Thinking cap on

At a time when most software was still developed in-house, David Bishop, Beth Wooding and Chris Palmer realised that even the best programmers is not necessarily a brilliant creator of original specifications. As Tigress Designs they set out to change that.

The team came up with the C64 Golf Construction Set for Amsoft, which was well up to par, and insisted their names were removed from Demark's *View To A Kill* following (quote) 'artistic differences'. But probably Tigress's most impressive offering was a game with only a handful of

MIND OVER MATTER

Designers of the first generation of computer entertainment often looked to traditional board games for inspiration. Chess, Draughts, Backgammon and Reversi (Othello) were all staples of those early home machines. Effectively, Think! is also a board game... but one you could never transfer to a board!

The playing area is a six by six grid, across which two opponents take it in turns to slide different coloured counters a square at a time, one from the bottom, the other from the right hand side. Once counters reach the far edge, they vanish. The aim is to create a line of four counters, vertically, horizontally or diagonally.

That is essentially all there is to it. However like all the best games, the simplicity of the rules belies the sophistication of strategies available. Every time a new counter is moved onto the board, all the counters in the same row are pushed one space further along and, equally importantly,

A screenshot from the game 'Spectrum 3D'. It features a 3D grid environment with various objects like cubes and spheres. A title bar at the bottom reads 'Spectrum 3D'. The interface includes a 'Spectrum 3D' title bar, a 'Spectrum 3D' logo, and a 'Spectrum 3D' button.

As the two sides battle for supremacy the board becomes an increasingly complex pattern of markers. Every move could open up a winning line for either player.

"Effectively, Think! is a board game - but one you could *never transfer to a board!*"

HALL OF FAME

How does a game qualify for the Hall of Fame? It may have been a best seller in its day; or overlooked and underrated. But one thing's for certain, it led the field, either creatively or technically. Clones don't qualify, however competent. And it's got lasting appeal. It's the program you still want to play after years - not weeks. So if you've got any suggestions, drop us a line.

THOUGHTLESS GENERATION

After Arielsoft's withdrawal from the UK, Thinki reappeared as a £199 cheapie on the Firebird Silver range. Following the sale of Telecomsoft to Mikroprose, the budget label was dropped and though certain titles were sold, Thinki was deemed too old to bother reviving.

This is short-sighted. Nobody would suggest scrapping chess because it's been around for centuries. A good game is always a good game and Think! was a classic. Though its simplicity might make it look skimpy as a £25, 16-bit release, it could attain cult status as a budget title. Personally I'd love to see it in a pop-up version for MS-DOS; it's the ideal diversion for PC owners whose carabellas are being turned to sage by their spreadsheeters.

**Find out its limits.
Look in the mirror.**

Introducing the powerful new Atari 1040 STE. With such an awesome machine, we're convinced the only limits you'll come across are your own.

Based on the incredibly successful 1040 STFM, the 1040 STE itself goes beyond the limits of its predecessor.

The 'E', by the way, stands for 'Enhanced'. But once you've discovered its amazing array of features, you may consider 'Enhanced' to be the understatement of the decade.

Perhaps the most outstanding feature of the 1040 STE is its graphics. Its palette contains over 4000 colours (all right, 4096 to be exact).

To ensure precise and realistic images, the STE features 'hardware scrolling', enabling smooth scrolling in any direction and split-screen effects. And, with the SM124 monitor, you'll get razor sharp black-out-of-white text that's as clear as the type on this page.

To complete the picture, it is able to 'phase-lock' its video output to an external video source, permitting direct linking to a Genlocking device.

The 1040 won't just have your eyes swivelling in their sockets. Your eardrums will also take a pounding from the 8-bit PCM stereo sound.

The new PCM (Pulse Coded Modulation) sound system's two chips allow the 1040 STE to replay high-quality sampled sounds, in stereo, without burdening the CPU. Or, for even more of an earbusting, just add a couple of RCA output jacks and power the sounds through your own stereo.

Of course we mustn't forget memory. One megabyte of RAM comes as standard. If that's not enough, the 1040 STE provides four SIMM sockets. Simply plug in some SIMM (Single In-line Memory Module) boards and boost the RAM up to four megabytes.

To help you handle all this technology, we've added even more: a Blitter chip, capable of shifting data at high speeds independent of the CPU, and a new version of TOS.

The TOS 1.6 (operating system) has an enhanced file selector with drive-change buttons, improved desktop with file move, MS-DOS compatible disk formatting, and better application installation and auto-booting facilities.

As you'd expect, there's a huge range of peripherals including hard disks, floppy disks, laser printers, colour monitors and even Megafile 44, Atari's unique 44-megabyte removable hard disk.

As well as all this hardware, there are hundreds of software programmes for the 1040 STE - we're even throwing in the ST-Series Productivity and Leisure bundles free.

The Productivity bundle features a database, spreadsheet, word processor and business graphics package, and there's S.T.A.C., First BASIC, Hyperpaint and Prince in the Leisure bundle.

If you're itching to get your hands on the controls, there are two 15-pin analogue controller ports (which accept paddles, light-guns and light-pens) and a 9-pin mouse port and joystick port.

With adaptors, up to six people can use the 1040 at one time. Just in case it's too much for one person to handle.

At £499.99 it certainly won't be too much for one person to afford.

The ideal computer at the ideal price, you may think. We think so, too. But there remains only one potential problem: not whether you'll make impossible demands of the 1040, but whether the 1040 will make impossible demands of you.

Please send me further details of the 1040 STE and other Atari products

WITHOUT IT YOU'RE JUST PLAYING GAMES

REMEMBER CAESAR?

One of Mirrorsoft's earliest titles was Caesar the Cat, a highly original game programmed in Hungary for Andremedia Software. Mirrorsoft were one of the first UK software companies to bring in Eastern European games (see our article on Russia last month). Other early hits included an official licensed Rileys game, plus Dynamite Dan, Strike Force Harrier, and Gemet Greater.

The Mirrorsoft team—standing with me! after the ACE team had left! (By Cathy Campus, Richard Howson, Allan Bentley and Simon Anderson)

Bit Blitz

ACE readers get on
the road to Mirrorsoft,
meet the Bit Maps,
and eat pizza...

The world's first Turtle conference took place amidst mounds of Pizza at the Mirrorsoft offices in South London on Thursday 19th July. The Turtles themselves kept a pretty low profile, which is just as well because they wouldn't have been a match for the assembled ACE readers, who were determined to give Mirrorsoft a good dose of the bo. It all started when ACER (that's ACE reader, OK?) Trevor Attridge stood up in the middle of the Back to the Future III demo and, in no uncertain terms, told the assembled com-

pary what he thought about licensed software and where they could stick it. There ensued a heated debate, fuelled by slices of American Hot and Spicy Beef'n Tomato, about the pros and cons of licensed games.

For the price you're selling it for, growled Trevor, I wouldn't buy it. Which was perhaps a little hasty because (a) we'd only seen a few screens of the demo and (b) we certainly hadn't played it. As another ACER put it later, 'Actually, I thought it looked rather good and we were inclined to agree, reckoning that the screens we'd been shown revealed a distinctly above average license, but we kept our voices down in case Trevor got the bo out again. Ironc, really, since Mirrorsoft have been at the forefront of original games design in the last few years: bringing us titles ranging from Falcon through Dungeon Master to Bloodwych and—in the near future—Duster (see panel). And nowadays, as Mirrorsoft pointed out, there's simply no money to develop original software unless you release the better-selling licensed titles every now and again to keep the pennies rolling in.

Of one thing there was no doubt: Mirrorsoft showed all the generous hospitality that a major software house can show its friends—which is what we all were when the time came to leave. Even Trevor had a tear in his eye.

ACE CONFERENCE ROLL-CALL

They came, they saw, they conquered... A quick photo-tour of the backs of the bravest British Rail and London traffic to join the ACE Mirrorsoft Conference. Will YOUR mug be on these pages next time?

Brian Colborne was shown in his jester of Speedball 2. A loyal Mirrorsoft fan indeed.

Andrew Bradford. Trevor told us if it could be you saying what it comes out...

David Pennington enjoyed himself so much he burst in the room. Mirrorsoft had the roomed the day now being ACE.

Arne Samdal, particularly impressed by Cadaver, Good stuff, Arne!

Trevor Attridge certainly wasn't one for carrying those banners—he only usually went for the night—and seeing us so late in the day was much for engaged himself.

CADAVER

This is IT, said Jim, it looks really marvelous—definitely buy

Cadaver is rapidly approaching completion. With over 300 screens and some of the best isometric 3D graphics ever, it does look pretty impressive. Hired as a bounty hunter, your task is to enter a castle and destroy the insane chancellor Diemon.

Gameplay includes mapping, puzzle solving, and arcade action. Out on Amiga and ST in September for £24.95, with a PC version to follow for an extra fiver.

Cadaver on the Amiga looks great, with ladies in gowns and warriors. Well, too be the ultimate in isometric 3D adventure. Can it be better than the legendary road Over the Top? Not this autumn.

SPEEDBALL 2

If you liked Speedball you'll go gaga over this one. More

weapons, bigger push, player and team management, and a host of extra playing features. Out in the autumn for ST and Amiga at £24.99, plus the usual extra liver for PC owners. Looks great - keep your eyes peeled for the ACE review

team management in Speedball II - much admired by the conference attendees who had experience of the original - 'Real's very kind at game - without Simon Collinson

SOLID GOLD!

Each month, we'll let you know about forthcoming conferences around the country. If you think you might be interested in attending one, all you have to do is send us a postcard with your name and address clearly written, together with a daytime telephone number if at all possible. You also need to tell us:

• Which conference you would like to attend. If you're applying for more than one, put them in order of preference. If no conference is listed for the software house you'd like to visit, put the software house's name down and

MIRRORSOFT

Ever since Mirrorsoft launched its Imageworks label - which was nominated Software House of the Year within four months of its inception - Mirrorsoft have been riding high in the games market.

Now they're heading into the 90s with a particularly strong lineup. They've been particularly careful to ally themselves with good labels - including Cinemaware, Spectrum Holobyte and PTL - and they've also got one of the country's largest CD development divisions.

They're now heavily involved in film licensing and currently have the rights to Diehard II, Flight of the Intruder, Back to the Future, and - the big one - Teenage Mutant Hero Turtles. Cash from these big earners will ensure a continued flow of original titles like Duster from the Imageworks label.

'Amazingly enjoyable! To chase 45 is rapping people off - it's worth for more!'

Parital Pemberton, ACE Conference Member

Jim Foster must be the most Conference member yet - 'he made my day!' he said afterwards

Andrew Nibbel couldn't be a player - and for action, was for strategy

Anthony Kent was impressed by the originality of the Duster line

'Duster's going to take a lot of getting into...' remarked Anthony Viner

David Hughes - 'Duster was a little more a long range missile display as you can see more targets...

'Duster doesn't seem' he agreed with PTL's ball thought Puntis was something very special

Joe Bore from Prime Systems home a get lost during the demonstration of Back to the Future II. An excellent presentation, said Andrew Pemberton. It was great being told exactly what was involved in producing the game.

we'll put you on the list for that conference when (and if) it is organised in the future.

• The machine you own, so that we can make sure you get some juicy free gifts for your micro!

• Your age, so that we can ensure a good spread of age groups at each conference

• If you are a subscriber, send your application in an envelope together with the address panel from the last issue of ACE that you were sent

Obviously we have to limit the number of people attending each conference to a maximum of 15. In addition, we have to make a nominal charge of £5.00 to help cover costs. All places are allocated on a first-come, first-served basis. Subscribers, however, get priority allocations for the first five places in each conference, and they may also attend free of charge. You can find out how to become a subscriber on page 30.

A couple of weeks before each conference, we'll select the lucky readers from those who have applied and inform them of the relevant details. If anyone can't attend, they'll be shortlisted for a future conference and another selection will be made for someone who can take their place.

FORTHCOMING CONFERENCES:

Microprose 12.30pm Thursday 30 August 1990 in Tetbury, Glos.

Meet the company who've produced some of the best simulations ever - and you'll even get to do some REAL flying in the Microprose plane! Unfortunately we've heard that Mike Singleton won't be able to attend, but readers can still count themselves lucky - because we've arranged for Alf Girdford to be there in person, so you can meet Andy Braybrook (of Undun fame) and Steve Turner.

US GOLD 12.30pm Thursday 11 October 1990 in Birmingham - **NR DATE CHANGE**

The big one - but please note we've had to change the date from the one given in last month's issue. USG are planning a tremendous welcome for ACE readers, including hands-on testing of the latest Lucasfilm and Delphine products, and com-ops galore. You'll also get a rare opportunity to meet console developers, following USG's Sega versions of Paperboy, Gannet and others (see the Console section of Screenstun in this issue).

DUSTER

Set in an agricultural colony world in 2800AD, you get a job as a mutant bug hunter, equipped with arms & craft that get down from your mother ship to blast a 3D vector graphic landscape. Rich in strategy and action, Irfan Jamadar spoke for everyone when he remarked that it was 'very interesting. A true in-depth scenario'.

Duster: you invade the mother ship, which you control the game's management functions

Apprentice

Zolo, an apprentice to the Master of the Guild of Magicians, is young, talented and wise beyond his years. Though he has another 400 years of apprenticeship to serve, Zolo has given glimpses of brilliance. His reward is a chance to enter the Guild provided he can cross the bewitched and dangerous world of Fumo, the dragon. The world of Fumo is colourful and full of cute but intelligent inhabitants. There are many hidden levels and rooms which can only be entered after solving different puzzles.

Zolo will need all his guile, wit and mastery of his craft to solve the complex puzzles. His youth and agility will be an asset as he journeys through the bewitching colourful land of Fumo. An arcade adventure full of colour, superb graphics and intrigue, to grip your attention from start to finish.

Amstrad's new machines boast solid looking hardware graphics routines and sound, but the new technology can only be accessed by cartridge software

CPCchoice

The key to Amstrad's new range is considerably improved graphics and sound performance, achieved through custom hardware and new firmware routines.

There's also a reasonable number of purchase options. There are three machines, two upgraded CPC's and a new console. If you just want to access the new technology, £100 will get you a GX4000 console, two paddle controllers, a demo cartridge containing *Burning Rubber*, a WEC Le Mans clone developed by Ocean and a few pence change. However, if you prefer the added functionality of a CPC with keyboard and storage medium (tape on the 464, disk on the 6128) AND the opportunity to play the new console games, then a new cartridge port on the CPC Pluses allows you to do so - at a little extra cost, of course.

THE NITTY GRITTY

Beauty is, as they say, only skin deep, and the design of the machines reveals a couple of flaws at closer inspection.

On the 464, one major problem we encountered was the operation of the tape deck. The controls are sloped, and set at an angle to the keyboard. Obviously you have to press the buttons down to make them work, which is a lot easier to say than to do. For some strange reason, the buttons are designed to pivot inward, not downward, 'locking' at about a 45 degree angle from the tabletop. As the buttons are curved, this means you have to use a fair bit of pressure on them, which makes tape operation not only irritating, but downright uncomfortable.

One other niggles - on our machine the cartridge slot required a pretty hefty shove to get the cartridge properly connected. That's better than being too loose, sure, but you shouldn't have to push THAT hard! Once you start using this amount of force, the possibility of incidental damage increases proportionately.

The good news, however, is that the old keyboards, which were very 'springy' on the 6128 and rather unresponsive on the 464's, have now been replaced by a much brighter, faster and generally more solid feeling unit, with a far better arrangement of keys.

The inclusion of an extra

This month sees the release of three new machines from Amstrad, namely the redesigned CPC's, 464 plus and the 6128 plus and Amstrad's first launch into the 8-bit console market, the GX4000. ACE brings you the definitive and unbiased review of what Amstrad hope will take them into the lead in the 8-bit micro market.

"We entered the home computer market in April 1984 with the CPC464, and since that time we have sold 2.5 million CPC machines. We are now offering 464 Plus and 6128 Plus customers the best of both worlds - they can continue to play their favourite games and can also enter the new world of the ROM cartridge game. And for those who just want to run ROM cartridges, we have the GX4000 console."

Michael Wiles, Amstrad Group Sales and Marketing Director
Paris, 28th August

The GX4000 is entering the marketplace in direct competition with the Sega Master System and the Commodore 64 console (see next page)

9-pin joystick port, plus an analogue joystick port, opens up possibilities of game design that the previous 8-bit CPC's never had. That's not to say that all the old CPC software will fall into disuse. The Pluses have total compatibility with the old machines, and why shouldn't they? After all they are essentially the same machine.

SOFTWARE POTENTIAL

Here is the real problem. Even though the machines have these new sound and graphics chips (see box), the new circuitry can only be accessed through the cartridge port. This means that any new tape or disk based CPC software developed now, will have to be exactly the same as the old CPC software. This is apparently to ensure full compatibility with past, present and future software.

Of course, you could produce cartridge software for both the Plus machines, but the cartridges don't come cheap for the software houses - which means they're certainly not going to come cheap for you. Expect to pay similar prices for cartridge software on these units to the ones you pay for 16-bit products.

To all intents and purposes, the CPC plus range is the old hardware with the new GX4000 bolted on. As such, they're good machines for a first time buyer who prefers the convenience of the monitor bundling and one-plug Amstrad approach, but they're definitely not the upgrade that CPC owners are crying out for. It's also dubious whether the once advantage of the monitor/6128 package over the Amiga is sufficient to win it a sizeable share of the market. Although an Amiga plus monitor costs substantially more, you can get the Amiga on its own for less and run it through your TV while you save up for the better display - and there's no real comparison between the Commodore 68000 machine and the new Plus range in terms of hardware capability.

THE CONSOLE

The GX4000, on the other hand, is a completely different kettle of fish. It seems a bit unusual to release an 8-bit machine (this close to the release of the Sega Megadrive) and our initial thoughts before seeing this machine were that it was a bit of a waste of time and wouldn't have a chance. After taking a good look at it, however, we can honestly say that it puts the other 8-bit offerings to shame, like the PC Engine.

The GX4000 is the end result of 'months of work' lasting with some of the 'top programming houses in Europe', finding out exactly what they would want to see in a machine. So what you have is an 8 bit machine with a

The new range is certainly good looking - and despite rumours about the Plus machines, the console looks promising.

SOUNDING OFF

The biggest improvements made are in the graphics and sound departments. Graphics wise, the palette has been updated to include the soon-becoming standard of 4096 colours, of which 14 can be displayed on screen at once in normal mode, or 32 by using the hardware interrupts. Hardware pixel scrolling has now been incorporated, along with hardware split screen effects, with each area of the screen using its own palette of 16 colours. There are 16 hardware sprites available, each 16 by 16 pixels, though for some reason there is no board collision detection.

Sound has also been improved - three channels of stereo sound, through either a stereo monitor or headphones isn't much to write home about, but the good news is that the sound chip can now be programmed to run separately from the CPU. True multi tasking with no loss of speed.

The CPC188 Plus looks the business, but suddenly you remember that at heart it's a CPC machine! In 1986 it made more than a cartridge port and 68000 compatibility to make this a desirable upgrade.

POWER AND PRICE

Here's a brief summary of the machines.

	GX4000	464 Plus	6128 Plus
Price	£99	£229 (b/w) £329 (col)	£339 (b/w) £429 (col)
Bundled with:	2 Paddles	1 paddle	1 paddle
	Power Pack	Monitor	Monitor
	Demo cart.	Demo cart	Demo cart
CPU	780A	280A	280A
Memory	64K	64K	128K
Medium	POM Cart	Cassette & POM Cart	3" disc & POM Cart
Colours	32 from 4096	32 from 4096	32 from 4096
Pixel scrolling?	Yes	Yes	Yes
Split screen?	Yes	Yes	Yes
Sound	3 channel stereo ASG	3 channel stereo ASG	3 channel stereo ASG
Joystick ports	2 digital 1 analogue	2 digital 1 analogue	2 digital 1 analogue

As with the CPC Pirsos, there are three joystick ports (two digital and one analogue), all video connections are handled through either a scart socket, a PAL TV modulator or Amstrad's regular monitor socket. A stereo headphone socket is built into the front of the machine. Visually, it's a very tidy looking machine and one that's surprisingly sturdy, despite its unusual size and uncanny resemblance to a Cylon attack craft.

The controllers provided with the machine are pretty standard. A cross-shaped rocker switch operated by the left thumb controls direction and two fire buttons, used by the right thumb, control specific operations within a game such as firing a weapon, changing gears in a driving game etc. We've never been a fan of these 'compact' little controllers, and this one, with smaller controls than most, is no better than the rest. Whatever happened to joysticks?

If *Burning Rubber* the cart supplied with the console, is a taste of what's to come, then the future looks bright. A fast, smooth colourful race game that's a fair cut above the usual racing rubbish we see on 8-bit machines, and a good argument against those who say 8-bit technology has two feet and a torso in the grave.

David Upchurch, in charge of hardware reference information in the new Pinks. If you've got a hardware query, drop him a line - I'm kidding, he says, so get your pants on...

FIVE IN ONE!

Welcome to the new Pink Pages. We believe that they represent the beginning of a new phase in ACE's development as we continue to improve the magazine on a monthly basis, sharpening the design and packing in more features and exclusive coverage with each issue.

The new Pinks have got a great future. What's it all about?

First, we've appointed two new members of staff, both of whom will be taking particular care of this section. Alex Ruranski is going to build the Pinks into the country's foremost software reference section, and David Upchurch is going to the same with hardware. So that's one side of the Pink story – comprehensive reference material for the committed gamer.

The other side is entirely up to you, because it's all about communication. Both David and Alex want to hear from you – whether it be criticisms or suggestions, and Pal Winstanley, who edits the *Adventureline*, is also ready and waiting for your input.

If you've got questions about either hardware or software, they'll be answered here too – we have a whole team of industry experts who are at your beck and call when it comes to sorting out entertainment queries. And next month we're creating a new Pink department especially for

that purpose – but the questions will have to come from you!

And to launch the new section, we've got a great console competition from Elite on this very page – and some Buck Rogers giveaways from US Gold opposite. Be proud, be perky, but above all, be pink...

THE COMPETITION

If you're console crazy, or just console curious, Elite have offered to launch the new Pink Pages by very generously giving away one each of ALL the major console machines. This is an opportunity you just can't miss to grab some of the neatest buzzboxes you can get your hands on.

What's more, it couldn't be easier! All you have to do is fill in the form below, answering the questions. No trick questions, no strings attached – just tell Elite what you think and they'll enter your entry in a prize draw for one of the following machines:

Sega Master System, Sega Megadrive, Nintendo NES System, Nintendo Gameboy, and Atari Lynx.

HERE'S WHAT YOU HAVE TO DO...

1. Select which machine you would like to win, THEN...
2. In no more than 25 words tell us why you

STOCK MARKET WINNERS

Congratulations to those lucky few who were first out of the hat with correct predictions for the ACE Stockmarket and Charlie Anna Webb of Birmingham correctly spotted *Mismanagement's* chances to lead the software house joint in the Company Counter. Kristian Phillips of Newcastle correctly predicted (along with many others) for *Ultimate W* as the top PC game, Phil Moorfield (a frequent winner) won *TMG2* by putting a 2 and bet on the *Cocacola* Collection as leading the CPC charts and also leading the draw list those who got *Head Over Heels* on the Spectrum. David McIlhenny won (for the second time, we think) his prize for spotting *Kick Off 2* in the Amiga charts. Every month, Christopher Allan of Perth spotted *F10 Stealth Fighter* flying high on the Atari ST, and finally Patrick Crutcher of Perth (and Chris from Perth – it must be a conspiracy!) served on ACE with International 3D being on the C&A. Bull down ladies – and the prizes, despite earlier delays, are on their way.

chose this machine

THEN...

3. Rate from 1st to 3rd choice which of the following titles you and your friends would like to see converted for your chosen machine -

- (A) Space Ace
- (B) Dragon's Lair
- (C) Paperboy
- (D) Robocop
- (E) Hard Drive
- (F) Teenage Mutant Hero Turtles
- (G) Kick Off
- (H) Frank Bruno's Boxing

THEN

4. Cut out the coupon and post it to the address in the panel

ALL ENTRIES WILL GO INTO A PRIZE DRAW TO BE HELD 31st SEPTEMBER 1990.

Deadline for receipt of entries is the morning of that day

ELITE CONSOLE CRAZE COMPO FORM

My choice of machine should I win is (tick one): Sega Master System ☐ Sega Megadrive ☐
Nintendo Entertainment System ☐ Nintendo Gameboy ☐ Atari Lynx ☐

My name:

My address:

My daytime telephone number (if possible, please):

Why I chose the machine ticked above (in no more than 25 words):

.....

.....

.....

.....

My most popular choice of game is (enter letter identifying game in list):

.....

(A) Space Ace (B) Dragon's Lair (C) Paperboy (D) Robocop (E) Hard Drive (F) Teenage Mutant Hero Turtles (G) Kick Off (H) Frank Bruno's Boxing

Just three of the prizes up for offer: Sega Master system, Nintendo Gameboy, and Sega Megadrive.

US GOLD IN THE 25TH CENTURY!

"Buck Rogers in the 25th Century is destined to be one of the biggest multi-media events of the year."

The sudden revival of Buck Rogers has come about through the famed TSR role playing company, who in conjunction with Penguin books are about to launch "a massive range of products" including boardgames, RPG's, paperback books and graphic novels. Buck is about to be reborn.

Putting the icing on the cake for us gamers, TSR have collaborated once again with the programmers at SSI (also jointly-involved with the *Dragonlance* series) to bring you *Buck Rogers - Countdown to Doomsday*.

Using a system similar to that used in the Dragonlance series, *Countdown To Doomsday* is described as a 'Sci-Fi Role-Playing space opera', in which the player guides a party from the New Earth Organisation (NEO) in an attempt to foil a RAM (Russo-American Mercantile) plot to reconquer earth, whilst engaging in planetary or space combat against a horde of enemies, along the way.

And good old US Gold are bring us the game later this year, to celebrate, they're giving away

5 copies of the Buck Rogers board game, so all you have to do is follow the instructions in the panel and post your entry pronto.

HOW TO ENTER

All you have to do is jot down the answers to the two questions below and pop them on a postcard, together with your name and address.

Send your entry to ACE USG Buck Competition,

Prory Court, 30-32

Farningdon Lane,

London, EC1R 3AU

to arrive not later

than 5th October

1990 First five cor-

rect entries out of

the hat get the good

185

LIFE AFTER BUCK

Buck Rogers' official movie-strip debut took place in January 1929. Set in a distant century when technological advancement Buck Hile resembles to that of the current time, Buck was seen by many as a symbol of hope for the future.

As an example of the futurist theme, many of the visions of Buck Rogers' world included (or perhaps predated) inventions such as the truth gun (a lie detector) and self-developing ultraviolet pistol (patented first). In an era that didn't believe it would be possible to place men on the moon, this century, Buck Rogers looked the trend and painted a future of accomplishment and technological triumph. While others made jump-minded predictions of the future (see our feature in this issue on page 22).

The reemergence of our hero in what will be the year 2656 AD, could signal the start of a whole new set of possibilities.

Unfortunately, there are far from the positive visions of the future characterized by the original strip. The Earth has become a polluted ruin, controlled and exploited by a evil Martian corporation. Marx Haefl has been whod by modified, and Marlene Sennow owns through what is known as the Corporate Metropolis. Standing although advanced, it is only in because his fight for survival was perpetuated and heightened by his own abuse of the planet.

*"Buck Rogers burst upon our vision like some gronder July 4th,
full of rockets celebrating tomorrow."*

AMIGA A500 CLASS OF THE 1980'S BUSINESS + EDUCATIONAL PACK £499 00inc VAT & next day courier

FEATURES

- Amiga A500 TV Modulator
- Mid Interface Software
- Kind Words 11 wordprocessor
- Page Saver DTP
- Super Base Personal Database
- Maxplan 500 spreadsheet
- Amiga Logo BBC Emulator
- Deluxe Paint 11
- Mouse mat 10 Blank Disks and disk wallet

AMIGA 1 MEG BAT GAME PACK

£499 INC VAT AND NEXT DAY COURIER

1 MEG GAMES PACK INCLUDES

- Fitted 1 Megabyte memory Expansion + Real Time Clock Card
- Everything listed for the A500 Real Game pack
- CRAGONS LAIR 1 MEG MEGADRIIVE!

A500 FLIGHT OF FANTASY PACK EXTRA £369

inc VAT and next day delivery

Includes:

- F29 Reladiator
- Rainbow Islands
- Deluxe Paint 11
- Escape From The Planet Of The Robot Monsters
- Witch!
- Intestation
- Modulator
- Power Supply Unit
- Work Bench 1.3
- Amiga Basic
- Mouse
- Bloodmoney
- Buggy Boy

HARDSELL

Here it is: the one and only hardware guide to give you COMPLETE details on the machines you're most likely to upgrade to, including that all-important criterion of software availability.

The ACE Hardware Guide is currently run in three different sections: 16-bit upgrade machines (this month); and consoles (next month). When space permits or circumstance dictates (as it did last month) we'll print more than one section.

ACORN ARCHIMEDES

Models: Archimedes 310, 3000, 410 420, 440
Package: keyboard, mouse and drive
plus: keyboard mouse and drive plus monitor (colour or mono)
Memory: 3000 512K; 310 1Mb, 410 1Mb, 420 2Mb, 440 4Mb
Processor: Acorn ARM
Price: Prices range from £789.97 for A3000 alone to £2644.60 for A440 with colour monitor
Contact: Acorn 0223 245200

IN BRIEF

Still the cutting edge of micro technology Acorn's ARM is about the fastest thing this side of a Gray. This very exciting machine - although gathering admirers since the introduction of the A3000 - still lacks a good games software base and is best left to the enthusiast.

GRAPHICS

Resolution: 320 x 256 or 640 x 256 with normal monitors; 440 x 512 available with multi-sync monitors
Palette: 4096
Colours: From mono up to 256 (320 x 256) or 16 (640 x 512)
TV: No
Monitor Output: Mono composite video colour - RGB + sync
Monitor Supplied: Depends on package bought.

Monitor Options: Acorn dedicated 14 inch medium res. colour; 12 inch high res. mono, Multi-sync colour
Sprites: 1
Speed: Blistering

SOUND

Speaker Quality: Good
MIDI: With extra hardware
Stereo Output: Yes
Performance: 16 channels (8 stereo pairs), 6 octaves, 1 internal speaker

HARDWARE

Disk Format: 3.5 inch - 800K
Disk Price: From £120 upwards
Disk Performance: Good and fast.
Keyboard: 103 keys with programmable auto-repeat. Early keyboards have a cheap feel given the quality of the machine
Joystick/Mouse: 3 button mouse; n support for joysticks
Interfaces: 25 pin D parallel, 9 pin mouse, 3.5mm stereo headphone jack, 64 way DIN, 41612 expansion port, IEC 320 video output, I/O interface

SOFTWARE

Existing Software Base: Still very limited. Some games available most software is for productivity and business.
Current Releases: See above
Games: Most famous as a Zarch (Vintar) and Conqueror. But there have been several impressive one-off titles released recently
Graphics: Potential is enormous. Some excellent packages available
Music: Like graphics, but developers remain shy
Prospects: Limited. Even the cheaper models find it tough competing with STs and Amigas.
Software Loading: Very reliable

BUYLINES

Best Buy Price: As RRP
Second Hand Availability: Still scarce, a some 305 and 310s starting to appear but expect to pay for them
Maintenance: One year's guarantee. Return to faulty machines deal at

APPLE MACINTOSH

Models: SE; SE30, IIfx, IIfx
Package: Monitor with built-in CPU and disk drive, separate keyboard
Memory: 1Mb

Processor: SE Motorola 68000; IIfx 68030, IIfx Motorola 68030
Recommended Retail Price: SE £2,195 upwards, £2,534 upwards (all ex VAT)
Contact: Apple 081-569-1199

IN BRIEF

A very expensive up-market machine for those keen on desktop publishing, WIMP systems and up-market software. Software is very expensive. Quite a few games in the US, but few over here. Good for MIDI musicians but be prepared to pay through the nose for software.

GRAPHICS

Resolution: SE 512 x 342 II 1024 x 768
Palette: SE - black and white; II (with colour monitor) 16 million
Colours: With colour monitor - 16 to 256
TV: No
Monitor Output: Integral monitor
Monitor Supplied: Built-in
Monitor Options: SE - use dedicated model only, II Apple II+ is monochrome or AppleColor II+ is RGB
Sprites: None
Speed: SE reasonably fast, II very fast. SE30 and IIfx/CX even faster, IIfx blinding

SOUND

Speaker Quality: Good
MIDI: Third party interfaces available
Stereo Output: SE no; II yes
Performance: 4 channels give good performance

HARDWARE

Disk Format: 3.5 inch - 800K
Disk Price: £150 - £200
Disk Performance: Generally fast
Keyboard: Separate with 81 keys including function keys and numeric key pad. Optional extra is the Apple Extended keyboard with 105 keys.
Joystick/Mouse: Joystick is not supported, high-quality single button mouse is supplied with machine
Interfaces: SE/SE30 - Apple Desktop Bus connector; 2 RS232C/RS422 serial; external disk drive, 96 pin Euro-DIN expansion slot, SCSI - DB-25 connector, external audio amplifier. II - 2 RS232C/RS422 serial, DB-25 SCSI I

SOFTWARE

Existing Software Base: A very wide base exists in all fields except

games

Current Releases: Adequate, though largely of US origin and in the business or DTP field.
Games: Very few arcade titles but plenty of icon driven adventures
Graphics: Lots of interesting software for those interested in DIY publishing
Music: Very well supported for MIDI software - but it's expensive to boot.
Prospects: As always, excellent - especially in business and DTP
Software Loading: Quick and reliable

BUYLINES

Best Buy Price: Generally the RRP - Macs are only sold through dealers ships. Ask for a discount for cash.
Second Hand Availability: Scarce and expensive. A better market exists in older models but these are best avoided.
Maintenance: One year's guarantee. Apple offers AppleCare - "musicians" you take out to cover the cost of repairs after the guarantee has run out.

ATARI ST

Models: Atari 520STFM, 520STE, 1040STE, Mega STx, Stacy
Package: SE and 1040 have keyboard with built-in disk drive, Mega versions have separate keyboard
Power Pack: Includes 520STFM with fast SE30 and I/O/CX even faster, IIfx blinding
Software: New "Discovery" pack includes similar value software to Power pack but with an STFM and an educational bent
Memory: 520STFM and 520STE 512K, 1040STE 1Mb, Mega STx 2, 2 or 4Mb, Stacy 2 or 4Mb. STE machines expand internally to 4Mb
Processor: Motorola 68000
Recommended Retail Price: 520STE (Power Pack) £399, 520STFM (Discovery Pack) £299, 1040STE £499, Stacy N/A
Contact: Atari 0753 33344

IN BRIEF

Excellent as a general purpose home machine for games, small business and productivity. It's the number one choice for MIDI musicians. The ST's price still gives it a slight edge over the graphically more advanced Amiga. The new baby ST - Stacy - is pitched by Atari to be the musician's portable since it is a complete 2Mb or 4Mb ST with hard disk and mono monitor in a small box.

GRAPHICS

Resolution: Low-res 320 x 200,

medium res 640 x 200, high-res 640 x 400

Palette: STFM 512, STE 4096, Stacy 2
Colours: Black and white in high-
res; 4 colours in medium-res, 16 in
low-res.

TV: Yes, Not Stacy

Monitor Output: STFM models
only, others through TV modulator

Monitor Supplied: No, Stacy has
integral LCD monitor

Monitor Options: Atari monitors
SM124 high-res mono, SC1442 med
res colour

Sprites: 1

Speed: Fast

NR: High resolution display is only
available on monochrome monitor;
medium and low res displays only
available on colour monitors or TV.
Blitter: fitted to late STFM's (Stacy
on STE) improves the GEM access

SOUND

Speaker Quality: Depends on
monitor

MDI: Yes

Stereo Output: STE only

Performance: 3 channel sound is
average to good depending on soft-
ware. STE features 8 bit PCM sound
but no current software uses it

HARDWARE

Disk Format: 3.5 inch - 720K

Disk Price: £1.20 to £1.50

Disk Performance: Reliable and
fast. Early machines were supplied
with a single-sided disk drive

Keyboard: 96 keys including 10
function keys. Has a cheap feel
which can be improved with third
party spring kits

Joystick/Mouse: 2 Joystick ports
are standard, 2 button mouse is
supplied with machine. Stacy is
supplied with a trackball.

SOFTWARE

Existing Software Base: Excellent
A few budget titles are starting to
appear now.

Current Releases: None of the
major software houses ignore the ST
so it is well served with plenty of
good software

Games: Across the board

Graphics: Good with some excel-
lent software to manipulate them

Music: Excellent. Plenty of sound
samplers, editors and MIDI software
make this the musician's choice

Prospects: Very good, but the
Amiga is currently the favourite with
software houses in the UK and the
ST has failed to capture a market in
the States

Software Loading: A hangover
from the original machines is the
360K disk format which means few
companies bother to supply double-
sided disks. This means large games
require two or more disks with all
the tedious disk swapping this entails

BUYLINES

Best Buy Price: As RRP. Watch out
for the twice yearly bundles

Second Hand Availability: Very

Common and quite cheap. STs do not
hold their value well - beware very
old, single sided machines
Maintenance: One year's guaran-
tee. Return to dealer if faulty.

COMMODORE AMIGA

Models: Amiga A500, A2000, A3000

Package: A500 has keyboard and
built-in drive with separate PSU,
A2000 has separate keyboard with
built-in (fan assisted) PSU. Recently
released A3000 is a very powerful
machine indeed

Memory: A500 512K, A2000 1M,
A3000

Processor: 500/2000 Motorola
68000. A3000 68030 16 or 25MHz

Recommended Retail Price: A500
£NA, A2000 £1236.25, Batman Pack
£389.99, Eight of Fantasy Pack
£389.99, Cless Of The 90's pack
£579.99, A3000 from £2699
Contact: 0628 878888

IN BRIEF

A stunning specification with custom
chips to rival almost everything
around, the Amiga is the first choice
for the most exigent of games play-
ers and video professionals. After an
initially shaky start the machine con-
tinues to sell extremely well and has
overaken the ST in the UK, though
the latter machine still has a slightly
larger installed base. The A3000 is a
top-end workstation substitute,
includes Workbench 2, featuring
enhanced icons, file handling, and
sound features plus Amiga Vision, a
multi-media programming tool.
A3000 also comes in three configura-
tions, ranging from a 16MHz,
40MBite hard disk at £2659 to a
25/160 at £3610.

GRAPHICS

Resolution: From 320 x 200 to 640
x 400 (more possible in software)

Palette: 4096

Colours: 2, 4, 8, 16, 32, 64 or 4096
bits. With modulator

Monitor Output: SCART + compo-
site video in monochrome

Monitor Supplied: No

Monitor Options: C1084 £349.99
Sprites: 16 in hardware + unlimited
8085 from software

Speed: Very fast with good soft-
ware

SOUND

Speaker Quality: Depends on
monitor

MDI: No. Third party interfaces
available

Stereo Output: 2 phono connec-
tors

Performance: Among the best
around. Custom hardware squeezes

9 octaves of 8 bit digital sound into
the four channels

HARDWARE

Disk Format: 3.5 inch - 837K A3000
40/100MBite hard disk formatted.

Disk Price: £1.20 - £2.00

Disk Performance: Noisy and slug-
gish. Third party software is avail-
able to improve matters.

Keyboard: 94 keys. 10 function
keys and separate cursor cluster

Joystick/Mouse: 2 button mouse
supplied as standard

Interfaces: Two Joystick/mouse;
stereo audio, external disk drive(s),
RS232, SCART, RGB+video; composite
monochrome video, expansion bus
(internal on A2000; 32 bit on A3000),
clock/memory expansion on A3000
only; internal PC expansion on
A2000 and A3000.

SOFTWARE

Existing Software Base: Smaller to
the ST

Current Releases: Everyone's doing
them.

Games: Something for everyone

Graphics: Quality and range is
unsurpassed

Music: Needs better support for
MDI. Internal sound software is well
supported thanks to IFF standards

Prospects: Excellent.

Software Loading: Noisy but usu-
ally reliable. Plagued by viruses

BUYLINES

Best Buy Price: Old Amiga 1000s
can be picked up cheaply enough,
but these lack the extra graphics
modes of later models. Try to find a
good value pack

Second Hand Availability:

Becoming common. Best buys are
late Amiga 500s with Kickstart 1.2

Maintenance: One year's guaran-
tee. Return faulty machines to deal-
ers.

IBM PC

Model: IBM's PC was the first PC to

be accepted in large quantities (not
the first PC) and remains the stan-
dard by which all others are judged.

There are hundreds of clones and
variations including offerings from
Amstrad, Atari and Commodore.

In general, with PCs you pay for speed
and better graphics standards. The
extra money is worth it if you can
afford it

Package: Depends on the manufac-
turer although most are supplied
with monitors. They can even be
bought in kit form at no extra saving

Memory: Usually 512K or 640K

Can be anything from 64K to 1Mb+
Always go for a 640K model

Processor: Intel 8086/8088 in base
machine is sometimes replaced with
the faster NEC V20/30. More expen-
sive machines are based on Intel's
much faster 286, 386SX, 386 and
even the latest 486

Recommended Retail Price: Can be
picked up for as little as £299 for a
"no frills" machine. With top-of-
the-range 486 based ones - and the
official IBM versions - the sky's
the limit. Look for a good EGA or
VGA model for between £750 and
£1200

IN BRIEF

Superb value if you want the ulti-
mate all rounder, the PC still betrays
its business origins. Almost every
major software house now part their
titles to the PC but these remain lim-
ited by the constraints of the basic
(most common) machines - which
means they tend to be limited in
sound and graphics. Definitely NOT
first choice if entertainment is your
preferred use for computers, or if
you cannot afford the better EGA or
VGA models (which are really essen-
tial for good games playing)

GRAPHICS

The PC's weren't fitted with
graphics as standard but most clones
incorporate the necessary hardware
and come with a monitor. There are
three main standards: CGA - a nasty
but all too common colour display,
EGA about the lowest colour display
worth considering, and Hercules
monochrome. To get Amstrad/ST
graphics you must go for at least
EGA or VGA which are usually only
fitted as standard to more expensive
machines (Amstrad's PC2088 is one
exception)

Resolution: CGA 320 x 200, EGA

640 x 350, Hercules 720 x 384

Palette: CGA 8 (in two fixed sets),

EGA 64

Colours: CGA 4, EGA 16, Hercules 2

Monitor Output: TTL, RS88B (CGA), analogue RGB (EGA)

Monitor Options: Vast. Many mon-
itors are dedicated to just one or
two modes - some have amber,
green or white monochrome displays

- check before buying

Sprites: None

Speed: From very slow - 8088 to
very fast - 80486

SOUND

Speaker Quality: Anything poor
from downright diabolical

MDI: Third party interfaces available

Stereo Output: No

Performance: Not the ideal
machine for the musically bent - an
Atari ST offers more for MIDI, the
Amiga more for software sound
purists

HARDWARE

Disk Format: 5.25in - 180/360K/
1.2Mb. 3.5in 720K/1.44Mb

Disk Price: 60p - £3.00

Disk Performance: Average

SEGA MASTER

Although most of the media attention is currently being focused on the Megadrive, the flow of quality titles for the Master System is continuing unabated. In the next few weeks you can expect to see *World Soccer* (a very similar game to Sega's *World Cup Soccer* arcade machine with a huge number of available moves and superb playability), *Alex Kidd in Shinobi World* (a great fun platform game crossover with the violent ninja beat 'em up that works much better in practice than you would think) and *Super Monaco GP* (a dual screen head to head racing game - like the old C64 game *Pitstop II* which is brilliant, as is nearly always the way with decently programmed two player games).

Also due for release soon are *Ultima IV* (the Master System version of the well known fantasy RPG - regular readers of ACE will have a pretty good idea what it looks like) and *Aerial Assault* (a shoot 'em up, as you probably guessed) headed for a Christmas release are the Master

System versions of *ESWAT*, the shoot 'em up with knobs on, and a novel puzzle game called *Columns*. More news on these latter two games and other releases in the near future.

As I mentioned earlier, most of the Sega news at the moment is being hogged by the Master System's big brother, the Megadrive. Like the Master System, it's a wonderful machine, and there are no doubt several Master owners who are thinking of upgrading. Once again, the old "Will my old software run on my new machine?" question rears its ugly head. Fair enough, it's a legitimate gripe - there's nothing worse than spending literally hundreds of pounds on software, then to have to bundle it all a loss with your old machine when you sell it.

And it's not just the money, is it? It's a shame to wave goodbye to games that you still enjoy playing (You miss 'em when they're gone, don't you?). Well, I'm pleased to tell you that Sega have designed a marvellous little widget called the 'Powerbase Converter' that slots into the Megadrive and allows you to run all Master System software. It's due to be released along with the Megadrive at the Computer Entertainment Show in September. And how much can you expect to pay for this marvel of modern microelectronics? A mere £29.99, no more than the price of a typical cartridge!

I hope this column will grow into required reading for all Master users. However, to aspire to these heights we need to know what YOU want to see covered. If you have any ideas, while - a! serious suggestions will be considered

● Alex Simmonds

AMIGA

Hello, and welcome to the new column devoted solely to all you wise Amiga owners out there. Now must be the best time to own an Amiga, and the future looks even better. Sales of the Amiga are outstripping those of the ST, the software is finally starting to fully utilise the hardware and the days of straight ST ports must be numbered. Whatever the developments, you'll be able to read about them here if they're not covered in the News pages.

The biggest news at the moment is (surprise, surprise) the CD-TV. Many Amiga owners will no doubt be asking "How will the machine affect me?" The answer has to be for the better. The CD-TV is, as you no doubt know, basically an Amiga and CD-ROM drive unit in one VCR-like box. Unfortunately, it's not compatible with the CD4 standard being championed by Philips and Sony (although if Commodore can beat the CD4 machines to the shelves, the difference may be to the regret of the Japanese rather than the Americans). It the unit does nothing

else, it will raise public awareness of what the Amiga can do and, if a success will mean Amiga technology reaching other and wider markets. This will, in turn, ensure a longer and stronger lifetime for our machine.

These are two really important additions promised for the CDTV. The first is a full motion video adaptor (no date announced) and the second is the little CD-ROM widget that will enable us existing Amiga owners to upgrade to full CDTV compatibility.

Unfortunately, the latter box of tricks may not be as quick in appearing as first thought. Delays with CDTV as a whole mean that the system will not be available in quantity until after Christmas. More ominously, there is NO fixed release date at all for the Amiga upgrade package. And that could well mean 1992.

When it does arrive, it'll revolutionise the way you view software. Games will not only get bigger, they'll also get more realistic. That's because the unit has full CD-audio under computer control and can simultaneously overlay Amiga generated sound. Sound quality of this calibre has been shown to have a 'knock out' effect, making game graphics appear more realistic. Let's just hope Amiga owners can get in on the act sooner rather than later and that Commodore put their fingers out.

SCREEN GEMS

Commodore have also announced that, following the success of the *Batman* and *Flights of Fantasy* bundles, there'll be a new pack for Christmas called 'Screen Gems'. It should include the film *Beavis and Butts-Head*, *Back to*

ACE

A new all-Pink, all-Perky section - monthly columns for the users of the nine most popular machines, written from a personal viewpoint by other users...

the *Future 2* and *Nightbreed*, plus one original game, *Shadow of the Beast 2*. As usual, *Duke* and *Paranoid 2* will also be bundled. It's a good package, and should do well.

I've recently been looking at the new release by Cinemaware, *Wings*. The player takes on the role of a First World War pilot, fresh from flight school. At the beginning you must allocate a pool of skill points between four attributes that affect the game, such as flying ability and stamina. You can then enrol in a squadron and take part in a variety of flying activities. There are a host of different missions to take part in, such as strafings and bombings. The most attractive missions usually land, I think, the most fun to play) are the aerial combat ones, where you engage enemy biplanes and triplanes over the countryside of France. This is depicted in impressive 3D solid vector graphics, mixed with bitmapped cockpit details the view is from behind your head, and you can watch yourself looking about for enemy 'planes! This is topped with Cinemaware's typically over the top but very excellent presentation. I've only had a brief play with it, but initial impressions are great. Expect to see a full review in the 'Screenlist' section next issue!

This column is written for you, the discerning Amiga owner. If you have any suggestions about how it should develop, just write to ACE. I'm always open to new ideas.

That's all for this month. As *Big Army* says "I'll be back!"

● Sam Vickers

ATARI ST

According to Atari's company president, Sam Tramiel (son of Jack—the man who made Atari what it is today), there are plans afoot for a combined ST and CD drive, with a likely release date of early next year, although nothing has been confirmed. This is seen largely as a move by Atari to rain on Commodore's CD-TV parade.

So, will it? The CD-i machines have been revving up for some time now, generating a lot of frustrated interest due to the lack of actual consumer products available. The market is thus awaiting a working product at a reasonable price with a halfway decent software base.

One thing we can be reasonably certain of. Either the Asian machine will be a flop, or else it will offer a good deal more than simply an ST with a CD-ROM. Unless you have at the very least computer controlled multi-tasking CD-audio capability as well (as in the Commodore CD-TV), CD-ROM will not, in 1991, be able to offer sufficient incentive to software houses, who will be offered

CD mass storage and extra functionality by both CDTV and CD-I. So don't just give us CD-ROM, Mr. Tramiel.

On to software. Those with an artistic bent looker, madam, don't start me off! will have looked with envious eyes at the Amiga paint package Deluxe Paint. Well, drool no longer! STers, because Electronic Arts have announced Deluxe Paint ST. Look out for it in late September at the special introductory price of \$49.99, rising by a further tenner after December 1.

The games continue to improve on the ST, particularly scrolling shoot 'em ups. One game I loved recently was *Venus - The Fly Trap* by Gremlin Graphics - it has superb smoothly scrolling graphics, excellent animation and sound, and a tough game challenge. The STE version is virtually indistinguishable from the Amiga version. Fair enough, it's not the most original game in the world, but it has bags of playability and polish - well worth a look, I'd say.

Another goody is *Midnight Resistance* from Ocean. Agan graphics and sound are pretty good, but be warned - the game's tough! In the arcade the joystick had a rotating top so that you could actually rotate your gun by 360 degrees. This has been reproduced by holding down the fire button and moving the stick, which takes a little while to master but doesn't seriously affect playability. Unfortunately the two player option of the arcade game is not available, but never mind.

Thanks to the US Gold people, I was able to have a sneak preview of UN Squadron and Strider II. UN Squadron is a conversion of the

arcade hit. The intro screens are nearly identical to the original, and there is some neat parallax scrolling in the game itself. Movement of the 'planes and other vehicles seemed a little jerky, but most of the features of the coin-op appeared to be there. Look forward to full reviews of the final versions when they appear.

Personally, I'm more interested in the Strider sequel, as I've enjoyed the original in the arcades and at home. The game design for Strider II is by Tiertex, who carried out the original conversion and, in an interesting reversal of the usual arcade to home conversion route, will be used by Capcom themselves as the basis for the actual arcade game. Apparently, this is the first time this has happened. The ST version is currently looking pretty good, although it admittedly doesn't look a hell of a lot different to the first. The plot involves Strider repelling an alien attack, but that's just the excuse for more jumping and slashing fun. If you liked the original, then it's probable you'll enjoy this sequel!

Actually, all this talk of Strider reminds me of a tip to help the less athletic see the later levels. Simply press F9 to pause the game, then hold down the HELP key, the LEFT SHIFT key and the 1 key. Release the keys and unpause the game with F10. Pressing keys 1-5 will take you to the relevant levels. Then pressing keys 1-4 will take you to various points in the selected level. (By the way if you have any Atari ST/E game tips, please send them in!)

If there's anything in particular you'd like to see covered in this column then please write to me (James Cogan) care of ACE. See you next month!

MEGADRIVE

Welcome to the future of home entertainment! The Sega Megadev has to be the most exciting home entertainment product available at the moment, and the wise people of ACE have decided that this fact should be reflected in a monthly column devoted to it - and here it is! This is the one to read for all that's hot 'n' happening on the Mega scene, so make sure you don't miss it!

Probably the biggest news on the Megadive scene at the moment is that Virgin Mastertronic will be officially launching the machine at the Computer Entertainment Show in September.

With its high quality specifications at the very reasonable price of £189.99 and the marketing muscle of Virgin Megastore behind it, the Megadrive should do well, particularly since comparable competition from the PC Engines and Nintendo Super Famicoms of this world is non-existent. This can only be a good thing for those of us who already own one of these excellent consoles because it will mean cheaper cartridges and peripherals.

BUT not everything is rosy in the Megadrive owner's garden. You, like me, probably own one of the 'grey' imported Megadrives, consoles intended to for the Japanese and US markets modified by third parties to run on the UK power and PAL TV systems. And you, like me, will no doubt be worried about how compatible 'official' Megadrive goodies will be with the imports.

In the quest for an answer, I contacted Virgin Mastertronic who sadly informed me that the UK consoles will indeed NOT be compatible. In fact, the UK game cartridges won't even be able to fit into an import's game slot!

In my opinion, this is a sad end, to some extent, foolish thing to do, because such a move alienates a large ready-made market who were surely instrumental in encouraging the company to take the plunge with a UK release. However, it's unlikely that we 'older' owners will get left out in the cold, although we may get left further out of pocket, since third party hardware manufacturers are likely to be beavering away at conversions right now.

On a lighter note, I've been finding out which games are currently hot on the shelves in Japan. The conversion of *Strider* looks very good, far superior to the recent US Gold effort.

The conversion of Atomic Robo-Kid is also looking very exciting. And good ol' Populous has come out too, and is apparently going down a storm. At last, a British success in Japan! By the way, keep an eye out for the Megadrive version of Super Monaco Grand Prix - it's fantastic!

Two games I'm particularly looking forward to seeing are *Aos* and *Phelios*. In the former, the player controls a giant 'Battletech'-like robot who must negotiate an isometric forced 3D landscape, while being attacked by all manner of tanks, choppers and 'planes. Looks like a hell of a lot of fun!

In *Phallos*, which appears to be based on Greek legend, you control a warrior on the back of a Pegasus-like flying horse who must battle his way through umpteen graphically gorgeous forced scroll levels. Yes, so it's ANOTHER shoot 'em up, but it does look good!

An interesting development on the Japanese Megadrive front is the new CD-ROM add-on. It was due to be released in late November over there for a mere 40000 Yen, which translates to just under £200! Of course, as is usual with products from Japan, the price will probably be substantially higher when it finally reaches our shores (What shores? A point of lager, please.) Unfortunately, problems have meant that release has been set back to Spring next year! Boy, if you thought the games were hot now, just wait until you see the sort of thing that will be possible with CD-ROM!

TALKING JAPANESE

They were skimming through the Japanese console magazines, which really are a totally different kettle of fish to the UK megz. For a start they're not lot filled, with densely packed features crammed with text and screen-shots. The sexual politics are a little dubious in places, though for example, in one there was a section on playing tips for an arcade shoot 'em up. Fair enough, so what? Nothing, except the on-screen reel manoeuvres were illustrated by photos of a bubbly young Japanese girl in a swimming pool. Naturally, your trusty reporter made his excuses and turned the page.

In my opinion, the Megadrive will be the machine to have in the years to come, whether your talking about consoles OR computers. There are going to be exciting things happening in the months to come, so if you want to read about them you know where to come. And if you've got any suggestions as to what you'd like covered, drop us a line!

Anyway, until next time
Megafans, hang loose! And don't for-
get to drop me a line if you've got
something you'd like me to cover in
the column.

GAMEBOY

Vo duces!
We've just
received a
copy of Teenage
Mutant Ninja
Turtles on the
Gameboy and it's
led. This Konami
action beat 'em up
lets you play the four most street
bad turtles in the world.

April, aie reports, has been kidnapped by Shredder and his gang of mutant morons. Bebop and Rocksteady. So it's time for the turtles to take out the thugs. Playing Leonardo, Donatello, Raphael and Michelangelo gives you the chance to use a sword, bow-stick, sai and nunchuks over 15 levels of fighting fun. Each turtle has eight hit points, a large of fifty ninjaball mutant moves and an unlimited supply of shuriken throwing stars. You can regain your strength by picking up pizza slices and pies. When all your hit points are lost, you're captured by the Foot Clan and thrown in jail with April. It's then up to the next nine turtle to rescue his friends.

Teenage Mutant Ninja Turtles on the Gameboy features sewers, plains, infested rivers and freeways filled with fast cars. Totally turtle, man. Initial impressions are good. The sprites are detailed and capture the essence of the cartoon series. Even this turtle theme tune has been converted to Gameboy stereo sound. Read the radical ACE review next month. Cowabunga!

DEFEATING DOUBLE ORAGON

Double Oregon is the best beat 'em up on the Gameboy to date. Here are some tips for the first three missions, discovered while playing the game for Console Screenfest (see page 36).

MISSION ONE: Nothing to worry about here, grab the baseball bat and pummel the punks. But I was told to see the damsel of the headbutt. Albedo. A end of level boss. Is the hardest sucker to slug-out. Never try to take him head-on. Approach at an angle, then let him have it with a series of fast punches. If you don't, he'll just grab you with one hand and rearrange your face with the other. **MISSION TWO:** Jump from the very edge of the moving platform to clear the warehouse. One of the whip grilles is really thick on the final stage of Mission Two. The just jumps off the bottom of the screen. The end of mission boss flies around the screen like a fast forward kung-fu film star. Keep close and keep kicking. This should end his movie mission.

MISSION THREE: The previous boss spits of missions one and two

return to seek their revenge - stay cool and use the same tactics as before.

MORE FROM KONAMI

Konami is releasing five new Gameboy titles this autumn. Teenage Mutant Ninja Turtles, Lone Ranger, NFL Football, Bill Elliott's NASCAR Racing and Blades of Steel. The Lone Ranger is a Western shoot 'em up featuring the cult cowboy, Tom and a horse called (Hi-Ho) Silver. Bill Elliott's NASCAR Racing is the second Gameboy race-game based around the great American sport of stock-car racing. Midscape's Days of Thunder is the other (see ACE 36) if you're interested in NASCARing, you can watch the real thing at 4.00am in some ITV television regions or Cruise Like Thunder with Tom Cruise in the popular teen-movie, Days of Thunder. Blades of Steel is a hockey game.

Konami is also releasing Skate or Die. Bad N' Rad on the Gameboy. Based around the famous Electronic Arts C64 game, the Gameboy version is more a seven-stage scrolling skateboarder arcade game than a straight skateboard sim. It features Bionic Lester, Misty Wart Monget, python heads and a Reister. Not-so-Happy Clown.

SEEING THE LIGHT

"You can't stay in the dark forever." Vic Tokai has an interesting peripheral for all you Gameboy owners suffering from insomnia.

"Lightboy is a unique accessory designed to be used with Gameboy. It is a lightweight, compact instrument which unfolds to fit directly onto the Gameboy, allowing you to view the screen with light through a magnifying glass."

"Lightboy, there's no better way to see the light." Contact Vic Tokai, 22504 Lockness Ave., Torrance, California 90501, USA. Don't forget to tell them ACE sent you.

HEIANKYO ALIEN LANDS

Apparently this baby is selling well in the shops. "One thousand years ago, an army of malicious aliens invaded the peaceful city of Kyoto, forcing the villagers into an endless battle with the unwell omed victors."

Originally a video game that took Japan by storm ten years ago, Heiankyo Alien has been specially adapted to the Gameboy. "It features the Multi-Matrix Sound System (MMSS) - the latest advancement in audio high technology."

Heiankyo Alien also features a simultaneous two-player option. It's released by Meltec.

Don't forget - if you've got something to contribute to the Gameboy column, pen me NOW!

C64/128

The recent console boom has seen the market flooded with machines solely designed to bringing the public games, games and more games. Not to be outdone by the Big Bad Boys of the Console such as Nintendo and Sega, Commodore have launched themselves into the fray with their own attempt at a dedicated machine. That feature however, is on another page. So here instead, are a few hints and hacks for your C-64. A few newbies, and others that might enrage the dust from some of those older titles...

First off the mark, part of the solution to **TUSKER** from System 3. The first load signed, sealed and delivered

1 Collect all the necessary items from the desert screens

These comprise the GUN, the AMMUNITION, the KNIFE, the AID, the WATER BOTTLE

2 Enter the cave mouth and walk through the first lead-off cave

Open the chest inside this second cave and take the book

3 Enter the water, and, using the knife, kill the alligator.

4 Enter the cave beyond the water, collect the nuggets and machete and exit the cave section.

5 Using the machete, hack away the bushes from the jungle to create an opening. Walk right through the jungle avoiding all enemies

6 Arriving at the final screen, use the aid to release the giant slug from its chains end to move to avoid it when it begins to move. It cannot be killed

7 Exit the screen via the top right hand corner

Extra hint: If caught in a whirlwind on the desert screens, wiggling the joystick rapidly left/right enables you to escape before losing too much energy

FORGOTTEN WORLDS

To prevent enemies from blasting you to kingdom come, start up the game as a two player option and play the second player in normal. When player one dies, all enemy attentions will be directed towards where the spirit was, enabling you to sail through the levels with nary a scratch.

SALAMANDER

This tip requires an autofire joystick. Play as normal until your last life. As soon as you are killed, switch autofire. ON to continue playing

ACE II

Gain invincibility simply by entering the name DUSTY BUG in the high-

score table.

THRUST

When the game has loaded, hold down the SPACE and RUN/STOP keys simultaneously, which should cause the high-score table to do strange things. Begin the game with extra lives and a HUGE score

MYTH

When loading the game, ensure the SHIFT LOCK key is depressed. You should then find that the game begins on level two although you won't have the sword. Collect the fireballs from the herps and fight your way through to level three. Deliberately lose ALL your lives. The next section will load and you'll be reaminated with the sword

GHOULS V GHOSTS

Try typing "WGAN RJFC" on the high score table

LAST NINJA II

A listing to boost your unlimited Ninjas on all but the final confrontation

MIDLAND COMPUTER REPAIR SERVICES

Unit 1, The Old Dairy, North Street, Melton Mowbray, Leics LE13 1NL (0664) 410148

FOR AMIGA/ATARI ST/BBC Desktop Universal Stand

The stand is a high quality, immensely strong unit. Colours are Grey for the ST and Brown/Beige for the Amiga 500/BBC models.

The unit is completely scratch proof! The supports are square metal tube design with oven baked enamel paint and has non-slip rubber pads. The platform is of high density chipboard coated in scratch proof material. The computer sits nicely underneath, with all round air ventilation, with the monitor or TV on top. The unit comes in flat pack form with all screws and tools. Assembly takes no more than 10 minutes. Twelve months warranty is given and if you are not delighted with the commercial quality of this unit we will pay the return carriage should you decide not to keep it!

Dimensions: 559mm W, 326mm D, 122mm H £21.95 (plus £1.50 p&p)

AMIGA A500 COMPATIBLE POWER SUPPLY UNIT

This unit is produced for us, under contract, by a specialist international power supply manufacturer. It is some 10mm slimmer than others on the market and is rated at 4.5 amps on the 5 volt line. This is a higher rating than most units available. A twelve months warranty is given on the unit. The price reflects direct to the end - user sale with no middle man profit! Guaranteed quality product. £34.95 (plus £1.50 p&p)

ACCESSORIES - AMIGA & ST

CONTRIVER MOUSE mouse mat & house	£20.95

AMSTRAD CPC

It's all very well to trumpet the arrival of the new CPC machines and the GX4000 console, but have a nasty feeling that interest in the latter may well make the old CPC's AND the new CPC's range slightly redundant as far as games software is concerned. A check with software houses about their support for the console reveals the following...

US GOLD

Geoff Brown, Managing Director of US Gold, said, "We will initially support the GX4000 with two games. *Epyx Worlds of Sport* is a compilation of events from the Californian companies popular sports-sims: *Summer Games*, *Winter Games*, *World Games* and *California Games*. *Strider II* is a follow-up to the highly successful Capcom coin-op conversion from last year. "I want Amstrad to be successful because it's a British company," confided Brown. "We're looking at consoles as additional sources of revenue. US Gold will continue to support our current range of computers. We can't release as many games on the GX4000 as the C64 console because we have to develop the Amstrad games from scratch - to take into account the special graphics and sound features of the machine."

MIRROSOFT

"We will support the GX4000 wherever possible," said Peter Illotta, Microsoft's Managing Director. "We want to make sure we produce the right type of game for each machine." Microsoft games on the GX4000 are likely in the first quarter of 1989. Illotta concluded, "We want the micro and console to live happily together, with Microsoft successfully participating in both markets."

OCEAN

Unfortunately, no-one from Ocean was available for comment as we went to press. But this leading Manchester-based software company is firmly backing the GX4000 with *RoboCop II*, *Artemis - The Movie*, *Plotting*, *Operation Thunderbolt*, *Chase HQ* and *Shadow Warriors*. Ocean even wrote *Burning Rubber*, the game supplied with the GX4000.

MINDSCAPE

"We've nothing planned at present," said Geoff Heath, Managing Director of Mindscape in the UK. Phil Harrison, Software Development Manager at Mindscape, told me, "There's talk of Chessmaster being converted over to the GX4000. But we won't be able to if Nintendo decides to launch the Gameboy and NES versions of the game in Europe." He added, "I don't really think much of the new Amstrad machines. They won't sell at all in Japan and USA, and they will only do moderately well in certain parts of Europe like France, Spain and the UK."

MICROPROSE

"We haven't made any commitments as yet, but we should have some GX4000 products early next year," said Peter Jones of Microprose. "We're

looking at arcade-style games. *Stunt Car Race* and *Rick Dangerous* would be ideal console games." He added, "Many Microprose games don't suit consoles because of their strategy elements. Don't forget, we're also going down our own road with the F-15 Strike Eagle II arcade machine."

PSYGNOSIS

Jonathan Ellis, Joint Managing Director of Psygnosis, told us, "Shadow of the Beast" is being converted under license by Gremlin! Other titles are likely to follow.

ELECTRONIC ARTS

This Californian company is unsure about the GX4000 because it thinks the Amstrad machine is too European. EA is talking to other companies interested in licensing its games on the Amstrad console.

DOMARK

Mark Strachan, Joint Managing Director of Domark, said, "We will be producing five titles on the GX4000 before Christmas, including *Klax*, *Escape from the Planet of the Robot Monsters* and *The Spy Who Loved Me*."

So will software companies really continue to support the standard CPC? What do you think? Write to: **CPC Pink Page, ACE Magazine, EMAP Images, Priory Court, 30-32 Farrington Lane, London EC1R 3AU**. Also, contact us if you have something to ask or say about anything connected with the CPC. Pokies for games, hardware questions, playing tips - you name it, we'll consider it for publication. We're also looking for a regular writer for this column. Interested?

© Rick Heynes

SPECTRUM

Anyone who has failed to notice the impending CES show should begin to take serious notice right here. Amongst all the usual hype and additional media attention, this year sees the launch of product that may have rather more impact than the usual promised impact on the home computer market: not least of all those little boxes emblazoned with the Sinclair logo.

With the taste for increasingly powerful game-specific hardware on the rise, the future for some of the less up-to-date machines must surely be looking less than favourable. Although Amstrad are a major force in marketing, can they compete with the Japanese giants, and - even more important - have they, with the release of their own 8-bit console, in effect dug a grave for us Spectrum owners? After all, wasn't the Sinclair name meant originally to be reserved for the more 'gamesy' machines from Amstrad? Why doesn't the GX have a Sinclair name on it?

Amstrad are adamant that they are not 'abandoning' us Spectrum owners. Yes, a spokesman told me, they are looking to make a serious impact into the console market with the new GX4000, but they are by no means ignoring the Spectrum. In fact, Amstrad do not regard

either their own or the opposition's consoles as any threat, due to the fact that the Spectrum is in "a different market area" and is still as important as ever due to its lower-price bracket. To stress this fact, Amstrad are preparing to launch a major TV advertising campaign to re-promote the Spectrum, showing at least on the surface, the courage of conviction. Let's hope there's more behind this than simple bluster.

SOFTWARE SCENE

On the more positive side, the upcoming show is far from the albatross it could be and is evidence that both software and hardware producers alike feel that the Spectrum is a long way from sinking into the murky depths of extinction.

Most of the action on the Spectrum scene comes from the software-side of the industry and includes the launching of the inevitable magicians, the sale of which should help sustain any machine, be it 8-bit or otherwise. The idea which looks set to become the only contender in terms of sales is of course Boathouse 1 as I am to mention it again! Teenage Mutant Hero (TMNT) turtles.

The surprise is that the Spectrum version does look - for a license - pretty sure. Converted across all formats, the game is looking equally as impressive on the Spectrum, as it does on 16-bit formats and, gameplay provided, should keep 8-bit critics at bay. Whatever you think about these green beasts, a good Spectrum version could give our format quite a boost over the counter during the Christmas season.

Other releases include the similarly blockbusting Total Recall, in which Arnie is once again converted into pixel-perfect form, (on this occasion to rampage through several levels of Martian destruction), and the unlikely Monty Python's Flying Circus, (so you too can learn how to identify

different types of tree from quite a long way off).

Other less hyped but potentially equally as good titles include the officially licensed Lotus Esprit from Gremlin, (sorry, no sign of Chase HQ II as yet), Time Machine from Vivid Image, (an excellent arcade-adventure with huge elements of strategy thrown in), and what could be regarded as the best Spectrum game around at the moment, the epic arcade adventure from Dynamic - Satan.

These, along with the many other titles scheduled for release on the 8-bit format, are far from indicative of its demise, despite the raging competition.

It is my personal feeling however, that the Spectrum is under little threat from the console boom, both superficially and sawesaw. This is explainable. In that the user base for the Sinclair machines has been established over a far longer period of time than that of the consoles, and that those people who have remained Spectrum owners (even having subsequently purchased an additional, more powerful machine), are unlikely to give up this long-time favourite for dead.

Add to this, the fact that console cartridges are rarely under twice the retail cost of a full-price Spectrum title and it is safe to assume that no matter how long or how hard the onslaught, Spectrums remain in a class of their own.

GIMME SKIN!

Well, maybe not skin, but certainly parchment. I want to build this Spectrum column into one that will truly reflect the face of Advanced Spectral Entertainment. That means news, analysis, crystal ball gazing - the lot. So write now,

© James Segal

STOCK MARKET

Who's top dog this month? Plus your chance to win free software in our regular monthly competition

We've given the Stock Market a good overhaul this month, with a new design and simpler presentation, since we realised that the wealth of information in the previous format was beginning to become overwhelming.

Here's what you get...

Having collated all the games reviewed in the latest issues of computer magazines, we've then calculated the average mark that each publisher received for every one of its games on each format. This is the rating that you see in the second column. So, for example, if the company is great at sourcing 16-bit games but botches up its 8-bit conversions, that will pull down the average mark, even if you can see one of its titles heading up the Amiga, ST or PC chart printed on page 165. If all the games are excellent, or if the company has just one brilliant program doing the rounds at the moment, it will consequently have a high rating.

The third column, labelled '+ or -', shows you how much the publishers' averages have improved (or deteriorated) compared to last month. A plus score here, and their games are getting better, a minus score means their games aren't doing as well as they were.

The last column – the Ranking column – tells you how well a software house's games are doing compared to everybody else's. Each month we calculate the average mark for all games on all formats that have been reviewed during the month. We call this figure the Software Index. Each company's Ranking shows how well their games compare to the average as expressed by the Software Index. For example, in this month's chart, Micro Style's current batch of releases are worth 9.38 percentage points above average – according to the industry's reviewers, anyway.

We print out the top 25 companies each month. In fact, we keep tabs on all of them, but you don't want to read through a list of over 100 names in every issue! Sometimes new companies come along – the asterisk by Core Design's name indicates that it is a brand new entry to the Stock Market company column – and straight in at number one, too.

Finally, we take care that the information here is genuinely useful. To that end, we don't count companies which have only received a single solitary review. Too often these 'solos' reviews are unrepresentative of the sort of marks a game would get from other mags, and if a title is only reviewed once ever, it's often a difficult-to-get-hold-of import.

Publisher Ranking	Score	Change
*Core Design	93.5	N/A
Delphine	93	N/A
Anco	86.5	-6.36
CDS	86.34	N/A
Micro Style	84.13	3.13
US Gold	84.08	13.28
Microprose	83.67	9.88
UbiSoft	83.22	0.22
Hewson	82.9	-6.8
SSI/US Gold	82.75	5.42
Domark	82.52	3.24
AudioGenic	82.3	17.3
Novagen	81.5	-1.25
Code Masters	81.5	15.64
Rainbow Arts	81.48	1.73
PSI/Mirrosoft	81	N/A
LimaSoft	80.9	18.17
Sierra	80.46	6.25
Palace	80	0.6
Greenin	79.85	0.5
Electronic Arts	79.32	0.63
Firebird	79	1
Ocean	78.34	5.07
Infogrames	78.23	-4.52
Hit Squad	78.23	11.79

WIN FREE SOFTWARE

Regular ACE readers will already know that we give away free software every month to those who can correctly predict the top entries in next month's chart (see page 165) and Stockmarket. However, we've made one important change to the entry conditions. Instead of filling in a form, we ask that readers submit their entries on postcards. Many readers already do this anyway, but in case of difficulty, the panel below shows you the information you need to include. We've introduced this change for two reasons: so that you no longer need to tear up your copy of the magazine, and because the competition is now getting so popular that it takes us hours simply to open all the envelopes. So please be very neat: entries in envelopes may be disqualified!

Round five winners are announced on page 124.

THE RULES

- All entries must be received by the closing date for this round of September 31st 1990.
- No employees of EMAP or of any company involved in the production, distribution or sale of ACE Magazine are eligible for entry.
- Only one entry per household. Proof of posting will be asked as proof of delivery.
- Winners names will be announced in issue 29 of ACE. These allow 28 days to identify errors after publication of that issue.
- We cannot undertake to deliver specific software titles as prizes, but rest assured that we will make every effort to ensure that the games got the absolute cheapest.

THE PRIZES

All correct entries will be put into a draw and a random selection made to draw one winner for each of the seven categories. There is a free game worth up to £25.00 for your machine waiting for you if you win. Five correct entries in the Jackpot Category wins you £150 worth of software.

ENTERING THE COMPETITION

STEP ONE

Enter your name and address, a daytime telephone number if you have one, and the Round Number.

STEP TWO

Tell us your age and which machine you own. Just in case you win!

STEP THREE

Examine this month's charts (see page 165). Then, using your knowledge of the games scene, try to predict which games will come top of the six machine-specific charts. Finally, enter on your postcard:

- the top game for the Spectrum
- the top game for the C64
- the top game for the CMC's

- the top game for the IBM PC
- the top game for the Amiga
- the top game for the ST

YOU DON'T HAVE TO ENTER A SUGGESTION FOR EVERY MACHINE! But remember that your chances of winning may increase if you do.

STEP FOUR (OPTIONAL)

You can also try to predict which company will be at the top of next month's Stockmarket listing (see this page). Enter on the card: **The top office will be...** (name of company)

STEP FIVE (OPTIONAL)

If you want to go for the jackpot £150 prize, then select any of the previous categories and try to predict the top FIVE entries for next

month instead of just the top one. Then tell us which category you're predicting for – it can be either the Stockmarket or any of the machine categories in Step Three. **REMEMBER – YOU CAN ONLY SUBMIT ONE JACKPOT CATEGORY!**

STEP SIX

Post the card (with a stamp!) to us to arrive not later than the closing date for this round (31st September). The address is:

**ACE Stockmarket
30-32 Farringdon Lane
London
EC1R 3AU**

Dozens have won prizes – perhaps you'll be lucky this time!

This is ROUND 11

Each month's competition has a round number so that we can correctly identify entries. You MUST include the round number on your postcard otherwise your entry may not be processed correctly.

ACE + WORD MIPS

Our monthly prize word puzzler, set by the inimitable MIPS

Here's this month's teaser. And while we're on the subject of teasing, we apologise for the tease (in very bad taste – and actually quite unintentional) which resulted in the August issue's crossword having one of the squares accidentally blanked out. Clever clogs will have realised that 13 across should have had ten letters – not nine.

PUZZLE PRIZES

Until recently, we've been offering £25 cash prizes to winners of the ACE puzzle and crossword, but several people have been asking us for games instead. From now on all prizes will be in software, so please make sure you include your name, address, and machine format when you write.

CLUES ACROSS

- 5 'Jet Force', e game from Firebird (6)
- 7 Game leading Isrealites to the Promised Land? (6)
- 8 Software Project's crazy digger (5,5)
- 9 In Melita I, Tony, formed a software house (5)
- 10 Stops stersers messing around (7)
- 13 Gives the latest news on new releases of old games (7)
- 15 Devil of e game from Dinamic (5)
- 18 Vivid Image game used to punch in nells (10)
- 20 Mom end Des get confused about signal changers (6)
- 21 Revi Shenker novel about Activision game? (6)

CLUES DOWN

- 1 Chop gets involvad with them in Linel game (3,5)
- 2 Software house's peek (6)
- 3 Sting's old force (6)
- 4 Nude dencing in Science Fiction (4)
- 6 He's from Bridlington, Yorkshire (4)
- 7 Call for more from software house (6)
- 11 Game in which you might go down the hetch (8)

OOPS!

We haven't given you the crossword solutions to June and July editions and winners will be announced next month. And bear in mind that this new Peter we have, we promise you we'll keep up to date!

- 12 Top ten tries playing game (6)
- 14 Merle's playing soldiers (6)
- 16 Cert uremium around for Gremlin game (6)
- 17 Storage device mey skid around (4)
- 19 So Me's upset by game-oriented language from Menderin (4)

HOW TO ENTER

Every month we offer a free game worth up to £25 for your machine. If you're the sender of the first correct crossword solution out of the hat. The address to send your solution to is: ACE October 88 Crossword, Priority Court, Farnborough Lane, London.

SCIN 341

The deadline for entries is always the first Thursday of the month named on the cover. In this case, it's Thursday 4th October 1988.

SOLUTION TO AUGUST 88 CROSSWORD

And the winner was E. J. Brookbank of Leicester, who recovered a 'beginner' £25.

ACE PUZZLE

'SEVEN LUCKY SEVENS'

Our diagram shows an unusual sequence of numbers. Each of the numbers after the first is double the preceding number but the curious thing is that each value contains one (and only one) seven. Those of you who are aware of the mystical properties of numbers will be surprised at such an

occurrence of such a sequence of seven numbers each containing just one digit '7'.

Now the values given here are NOT the smallest possible. There is one other set of numbers which have the same property.

Can you find the starting value of this sequence? Answer next month

ACE OCT.

HOT OFF THE SHELF

It's Saturday morning. Life seems some-what...well...some-how...er...not...um...quite right. Could it possibly be that you need...er...break-fast? No...a drink? No!!...A new game?? Ahhhh...the relief! And to make things even easier, here's a list of stunning powerplays that could change your life.

ANTHEADS

Cinemaware/Mironsoft • Amiga £18 99dk
For all those who loved *Came From The Desert* here is more of the same in the shape of a handy bolt on scenario. Its fifties style Sci-Fi again, and this time some very strange things are happening to the inhabitants of the tiny Mid-West American town of Lizard's Breath. You play 'Brick' Nash, an ex fighter pilot determined to solve the riddle of the Antheads. If you enjoy puzzle solving with great graphics and sound, then you can't go far wrong with this number, and if you haven't played *Came From The Desert* then why not give that a try first?

★ ACE RATING 902

CAPTIVE

Mindscape • Atari ST/STE £24 99dk • Amiga £24 99dk • PC £25 99dk
Another in the ever expanding number of RPG's portrayed using first person perspective. *Captive*, programmed by the veteran Tony Crowther pits you against hordes of rampaging aliens, with nothing but a briefcase at your disposal. This briefcase however, contains a computer giving you remote-control over a four-droid team, with which you must free yourself from the fortress where you are imprisoned. Excellent bitmapped graphics, atmospheric realtime stereo sound and a total of 55000 levels put *Captive* very much in the ACE rated bracket.

★ ACE RATING 939

CHAOS STRIKES BACK

FTL/Mironsoft • Atari ST £24 99 • Amiga TBA
The long awaited sequel to *Dungeon Master*. If you have already played using the first program you can use your existing chess pieces, otherwise there is another hall of mirrors you can select from. *Chaos* has a similar feel to *Dungeon Master*, but is much tougher. There are also some new features thrown in, like a character editor and help oracle (very handy). If you haven't played *Dungeon Master* then play that first before making a definite date with this game.

★ ACE RATING 945

CONQUEROR

Rainbow Arts • Atari ST £19 99dk •

Amiga £24 99dk • PC £24 99dk

An arcade style tank sim which makes use of a 3D graphics system based around the one David Buben developed for Zarch. There are three types of game available: arcade, attrition, and strategy. All three are best played with two joysticks. *Battlezone* style, but there are enough control options to suit every set-up. A definite buy for tank buffs.

★ ACE RATING 925

CORPORATION

Core Design • Atari ST £24 99dk • Amiga £24 99dk • PC £25 99
This role-playing cybernetic extravaganza from CORE pushes the limits of previous RPG's just that bit further. Corporation is a 3-D exploration puzzle-orientated arcade combat game in the traditional mould of *Dungeon Master*. Your objective is to find and remove an embryo belonging to the ultimate biogenetic killing machine, bred by the UKC Corp. Light-source shaded graphics and sound of film-like quality, along with excellent playability and an intuitive control method all contributed in pushing *Corporation* over the 900 mark.

★ ACE RATING 945

DAMOCLES

Novagen • Atari ST £24 95dk • Amiga £24 95dk • PC TBA
A unique combination of flight sim and adventure game, and sequel to the well-acclaimed *Mercenary*, has been in development for a couple of years now, but the resulting game has been worth the wait. The wireframe graphics of the original game have been replaced by solid 3D vector graphics, but they are just as

fast. There are now nine planets to explore instead of one city, so there is plenty of long term challenge here.

★ ACE RATING 935

F-19 STEALTH FIGHTER

Microprose • Atari ST £29 99dk • Amiga £29 99dk • PC £39 99dk
A program that could well be described as the Flight Simulator's Flight Simulator. The PC version has enjoyed much success since its launch a year ago, and now it's brothers on the ST and Amiga look set to do the same. The sim is based around the much talked about (or perhaps that be whispered about) Stealth Fighter. It boasts four huge scenarios with hundreds of missions, and plenty of detail. If you are looking for the definitive flight sim, then you can't go far wrong with this one.

★ ACE RATING 935

FLIGHT OF THE INTRUDER

Mironsoft/Spectrum Hologlyte • Atari ST £77 77 • Amiga £77 77 • PC £77 77
From the people who brought you the superb Falcon comes yet another world beating flight simulation. It is based on the book of the same name by Steven Coorts and has you flying either an Intruder or a Phantom on bombing and reconnaissance missions over Vietnam. The simulator is very strong on textures, including a superb (if a little unrealistic) auto-pilot option.

★ ACE RATING 919

FUTURE WARS

Palace • Atari ST £24 99dk • Amiga £24 99dk • PC TBA
A totally mouse-driven graphic adventure from French developers Delphine. You are just as a mild mannered office window cleaner who gets caught up in an alien plot to conquer Earth in the 43rd century. The graphics and background music are very striking and the game is made very accessible by the lack of text entry. There is enough of a challenge here to keep most adventurers happy for some time. A delightful game.

★ ACE RATING 910

GRAVITY

Imageworks • Atari ST £24 95dk • Amiga £24 95dk • PC TBA
Deep space strategy unlike anything you've seen before. The universe is being invaded by the alien outlaws who are attempting to turn all the suns in the universe into black holes. Meanwhile you must create as many inhabitable systems as possible. The game makes use of the principles of Einstein's Minkowski formulae - this makes for some very unusual graphics. When you add

the Pean e Force to fight off General Mantis' invasion force. This is done by managing people and resources via a series of tactical maps and menus. The game has disappointing sound, but nice 3D graphics, and enough solid gameplay to keep you going for months.

★ ACE RATING 948

MYTH

System 3 • C64 £9.95 £14.95 • Spectrum £9.95 £14.95

Pushes the C64 and Spectrum right to the limits. Fight your way through several time zones to reach the ultimate confrontation with the god Demeron. The game is captivating not only because of its size and depth but also because of the

superb animated sprites and sheer playability.

★ ACE RATING 925

OPERATION THUNDERBOLT

Ocean • Atari ST £19.95 £24.95 • Amiga £24.95 • Spectrum £9.95 • Amstrad £9.95 • C64 £9.95

Emimently successful conversion of the hot coin-op hit Operation Wolf. Grab your Uz and shoot your way through hordes of terrorists to rescue the luckless hostages. There are new 3D scenarios this time to add to the fantastic lead splitting of the original. Best played with a light gun, but a mouse will suffice if you don't have one. Joystick or keyboard controls don't really cope however.

★ ACE RATING 927

PGA TOUR GOLF

Electronic Arts • PC £24.99

Well, what can I say? For anyone who's never set eyes on a golf sim, this is one. Four accurately modelled courses and a wealth of options provide for a comprehensive and playable game. Each course is has been designed for the professional player, so fortunately there's a driving range to allow you to practice that swing. Features such as course maps, per centage range indicators and a 3D display of the green showing every pit and ridge all contribute in pushing PGA GOLF into the ACE Rated category.

★ ACE RATING 910

Attempt to beat the odds. It is available for practically every machine, so there is no excuse for not owning a copy.

★ ACE RATING 910

PLAYER MANAGER

Amco • Atari ST £19.95 £24.95 • Amiga £19.95 • Spectrum £9.95 • C64 £19.95 • C64 £19.95 • C64 £19.95

Amstrad £9.95 £14.95 • Kick Off with a management strategy element. The game is completely non driven, making it easy to get into. The management detail is superb, right down to planning in-match tactics. And for the match you can either watch from the sidelines or join in with the kick off style fun.

★ ACE RATING 920

ACE CLASSICS!

All the games in HOT OFF THE SHELF - this month's software selection, have been released in recent months and should be readily available from your local dealer or by mail-order. We've chosen the titles carefully to ensure that, if you should take your time, it might be too readily available. Don't forget that most dealers will be happy to order titles for you if they haven't got them in stock.

However, the truly discerning player knows full well that some of the greatest games of all time are just generally available in the classic ACE is compiling a listing for next month's History's Greatest Games. Not only that, but we'll be giving you advice on where and how you can get your sticky joints on them. Some of them you'll know immediately. Others, for example, and impossible to miss - but when remember, Clonus (USA) don't miss next month's definitive guide to putting together the ultimate software collection.

PIPEMANIA

Entertainment International • Atari ST £19.95 £24.95 • Amiga £19.95 £24.95

Spectrum £9.95 £14.95 • C64 £19.95 £24.95 • Amstrad £9.95 £14.95 • PC £19.95 • Macintosh £24.95 • Commodore £24.95 • MSX £9.95 £14.95 • UBCElectron £9.95 £14.95. The game that proves plumbing can be fun. You must construct a continuous length of pipe from several sections before the floor escapes. The action is just as compelling as that in games like Tetris and well have you burning the midnight oil in an

PRO TENNIS TOUR

Ubi Soft/Blue Byte • Atari ST £19.95 £24.95 • Amiga £19.95 £24.95

Spectrum £9.95 £14.95 • C64 £12.95 £16.95 • Amstrad £9.95 £16.95 • PC £29.95. One of the best tennis games really. The control method works great, with the standard of the computer players is good, so you'll have to put in a lot of practice.

There is a choice of grass, concrete, clay, and indoor courts, as well as comprehensive practice options. A good way of spending a few hours while you are waiting for

★ ACE RATING 900

THE FINEST HOUR: THE BATTLE OF BRITAIN

Lucasfilm • Atari ST £24 99dk • Amiga £24 99dk • PC £24 99dk
 World War II air combat re-lived in this superlative flight sim. You have the opportunity to fly a variety of WWII craft from the Spitfire to the Hurricane. A neat option is the camera which records your flight and can be replayed to assess your performance.
 ★ ACE RATING 933

TOWER OF BABEL

Microprose • Atari ST £24 99 • Amiga £24 99
 An imaginative 3D puzzler from Pete Cooke – the man who brought you Tau Ceti. You control three robots, a zapper, a grabber, and a pusher. They must be used to complete a specific task on a number of futuristic levels of a tower. This involves working your way past various nasty obstructions deliberately designed to impede your progress. This game will have you burning the midnight oil as you attempt to get past a particularly tricky level.
 ★ ACE RATING 930

ULTIMA VI

Origin/Mindscape • Atari ST TBA • Amiga TBA • PC £34 99dk • C64 TBA
 The ultimate role playing game. Sixteen thousand objects, two hundred and fifty characters, unlimited encounters, a quest that will take months to solve, and graphics better than you'll see on any other game of this type. The Ultima series of RPGs go from strength to strength. Join forces with Lord British and once more enter the fray... unbeatable stuff!
 ★ ACE RATING 950

VENDETTA

System 3 • C64 £9 99cs £12 99dk
 A great arcade adventure that really pushes the C64 to its limits. You must fight your way past the terrorists to defuse a bomb, and rescue the professor and his daughter. But while you are on the terrorist's tails the police are on yours. Most of the action takes place against an isometric 3D background, but there is also an excellent driving section to rival many full-scale driving games.
 ★ ACE RATING 912

VETTE

Microsoft/Spectrum Holobyte • Atari ST TBA • Amiga TBA • PC £29 99

High speed racing round the streets of San Francisco in one of four Corvettes on offer. The superb 3D colour graphics in the game give a great sense of the wind in your hair as you roar down precariously steep streets desperately trying to avoid pedestrians and other vehicles. Realistic and lots of fun, this game from the people who brought you Falcon, will have you hooked.
 ★ ACE RATING 926

WARHEAD

Activision • Atari ST £24 99dk • Amiga £24 99dk
 Veteran programmer Glyn Williams' latest masterpiece is set in deep space. Earth is under threat from a horde of nasty extra-terrestrial insects. The only hope is the FOE-S7, an advanced craft absolutely loaded down with weaponry. Fast solid vector graphics and rapid action make this a winner. Work your way up through the training missions and you'll soon be zapping away quite happily.
 ★ ACE RATING 920

WELLTRIS

Infogrames • Atari ST £24 99dk • Amiga £24 99dk • PC £24 99dk
 Effectively the follow-up to the resoundingly successful Tetris, Welltris takes the original idea and

literally turns it on its head. Seen from a plan-view, it requires you to rotate coloured shapes that fall down the walls, fitting them together to make a horizontal or vertical unbroken line. This achieved, the line disappears to make way for another. Despite the obvious connection, Welltris looks good and plays well.

★ ACE RATING 501
TELL ME!

If there's a game you think deserves inclusion in next month's Classic Games Guide (see page 153) Naturally we've got just a few ideas of our own, but I'm keen to hear from anyone with a personal preference for a long forgotten release. Write to:

8-14 SEPTEMBER

WEEK'S RELEASES AT A GLANCE

Thalion: *Dragonflight* (ST, Amiga £34.99). RPG set in fantasy world.

Micropress: *Silent Service 2* (PC). Follow up to successful submarine simulation.

Micro Style: *Oriental Games* (ST £24.99, Spectrum £9.99, CPC £14.99). More mental arts antics.

Accolade: *Bar Games* (Amiga £24.99). Collection of 'traditional' pub games on computer. Doesn't include 'Bunnies', 'Spook', or anything involving drinking fortunes.

Ishido (PC £29.99). Board game style program with an Oriental flavour.

Saturday 8

Core Design will be making a personal appearance at The Virgin Games Centre complete with its Corporation digitiser. If you want to have yourself featured in your copy of *Corporation*, be at 100 Oxford Street today (further details in our Dealers section).

Sunday 9

Monday 10

Tuesday 11

Wednesday 12

Thursday 13

ADVENTURELINE

Welcome to our new home! During the next few months, I'll be expanding this section to include more pages, gossip, news, and mini-reviews of adventure software for all lovers of the straight and narrow path. And if you've got any queries, contributions, suggestions, or requests let me have them! Write to me at the usual ACE address (see the contents page) and I'll do what I can...

ZAK McKRACKEN

Our solution continued,
from Mike Bareham

Now that you have all four characters together go out of the door and walk back to 131B Ave. Walk to the bus and switch to Annie. Pick up the blotter and the plastic card then out of the door to the bus. Switch to Zak and use the kazoo, then use the cashcard in the card reader when the door opens. Switch to Annie and use the cashcard in the card reader. Still as Annie use the reservations terminal and buy a ticket to London. Go to the plane and walk through the automatic doors.

Switch to Zak and use the reservations terminal to buy a ticket to Miami, then walk to the plane. Give the book to the bum and he will give you a bottle of whiskey and return the book too. Buy a ticket to Cairo then walk to the plane. Buy a ticket to Katmandu then walk to the plane.

Walk outside then give the book to the guard, who will then open the door for you. Through the door, listen to what the Guru has to say then go back outside. Walk to the right of the balcony and use the flashlight on it then walk to the left to the jail and pick up the flagpole. Go back to the yak and use the cashcard on the licence plate.

Buy a ticket to Kinshasa then walk to the plane. Next walk through the jungle until you come out of it (any direction will do) then enter the shaman's hut. Give the gift club to the shaman and he will take you outside where the shaman and other natives will dance around the fire. When they stop they will bob up and down. You must now make a note of the order in which they bob up and down as you will need it later. Go back through the jungle to the air-

port.

Buy a ticket to Cairo then walk to the plane. Buy a ticket to London then walk to the plane. Buy a ticket to San Francisco then walk to the plane. Buy a ticket to Lima then walk to the plane.

Walk through the jungle as before until you get out of it. Use the bread crumbs on the bird feeder and the blue crystal on the bird. You can now control the movements of the bird. Fly to the left eye of the huge carving to the right and pick up the scroll. Now fly back to Zak. Walk through the jungle as quickly as possible back to the airport.

Buy a ticket to Mexico then walk through the doors. Walk through the jungle again until you reach a clearing which has three temple entrances. Enter any of the entrances and use the map map enclosed called "Mexica Temple" to find your way around. You will have to use the "What is" command to find torches to light so that you can see where you are going. Find the room on the map called the crystal shard and make your way to it. When the room is found switch to Leslie.

CHRONOQUEST

D.G. Lyndon reaches the end
of the road...

MEXICO:

Machine - east twice.

Trunk - look at base of trunk, get necklace, north twice

Statue - look at stairs, turn disc on statue's head, get key, west.

Jungle - west, sw, south.

Maya - Use necklace on Maya warrior then na, n, na, ne, ne, n, n, na, ne, n.

Pyramid - use leather gloves on bush, use ring in hole in slab, wait time until 13:00, look temple door, use bone in left hole in

door frame, then up.

Chamber - use key on keyhole, look in chest, pick up punch card, down, W, SW, SE, SE, S, S, SW, SW, NW, NW, S, A, A, Machine - up, push switch.

CHATEAU:

Machine - south.

Library - get stone and photo, north

Machine - up, push switch, Use punch card in slot.

THE FUTURE:

Machine - push buttons on control panel, use stone on guard's nose, get uniform and strange key, use uniform, north, e, a, n, n, w. Push panel with circle and cross (left side of machine), use leather gloves on fuses, a, s, s.

Cell - use strange key on box next to east door (bottom right screen), Richard then gives himself up and that's all there is to it!

CORRUPTION

Getting started with Alexis
Kofteros, Cyprus

9:00: Go to the cubicle. Open cistern and get beg. Go to the dealing room then find your BMW. Open the glove compartment and get screwdriver. Exit car. Smash Volvo's window with screwdriver. Enter Volvo and get fielder. Exit folder and read the Affidavit. Open bag. Examine powder and drop bag. 9:45: David will enter and he'll get the powder. Go to Theresa's office and wait until she leaves. Get letter. Open drawer and get brass key. Unlock door with brass key and enter your partner's office. Get tape. Go to Margaret's office and get envelope. Read envelope and cheque, then enter your office. Open cabinet and get certificates. Now you have all the evidence that could send you to jail. Go to your BMW and put tape in stereo. Get tape, return to Margaret's office. Wait until 11:25.

BARDS TALE I

Hints & Tips from R. G.
Lewis

Explore everywhere. Start with the town then the sewers (4 levels). Then go to the catcombs (2 levels), the castle (3 levels), Kylanar's tower (1 level) and finally Manger's tower (5 levels).

You should have two realgiens in your

band and get them up to erchmage quickly. It is also useful to have a hand, a mink, a warrior and a galdin. This is a good mix of men. When you reach archmage, cast "GRSU". This gives you a greater demon which is very useful.

If you have a large fight, use one mage to cast "BEST" every battleround to keep your smen's hit points up to full. If you get some smoke in your eyes cast a new light spell. Make sure you keep enough space to collect new items. Change your warrior's weapon to see which cause most damage.

When you enter the castle you can teleport up to level 3 (2 above). You will come across a room which says "barracks". Enter and you will be faced by 99 x 4 berserkers. Fight these and you will get 59000+ experience points. It is a good idea to keep a note of the directions by casting "SCSI", then you can exit the castle by placing the "eye" in the statue of the mad god. You will then be teleported back to the gate of Kyleren's tower. The "eye" is in a chest in the castle.

When you enter Kyleren's tower you must find the wizard Kyleren who will give you an owa key. You need this to get into Mengar's tower. You should also find a silver triangle in a room on its own. When you come across a crystal statue it will keep returning to life after you kill it unless you are using the crystal sword.

When you exit Kyleren's tower go to the sewers then teleport from the cellar "16N, 17E, 3D". This will take you to the long

stairs going up which you should take to get you to the gate of Mengar's tower.

You ought to be at least level 28 before tackling Mengar's tower and have two archmages. Explore all levels of the tower to find seven words which will form a message needed to enter level 4. Useful objects found in the tower are: Mege Staff - recovers spell points. Conjurer Staff - halves spell cost. Frost Horn - More powerful than fire horn. Dragon Wand - bums like frost horn.

POLICE QUEST I

The continued solution from Anthony Quinn

Your next call will be to the coffee shop where a group of bikers are causing a disturbance. Enter the coffee shop and you will be instructed to go to the bar next door. Notify dispatch of your arrival. Enter the bar and make sure you have your nightstick from the car with you.

Approach the leader of the gang who will ask what you want. Type "move your bikes" and he will reply "and who is going to make us". One of the gang will try to grab you. Press F10 quickly. This will draw your nightstick and the gang will back off quietly.

Go back to the coffee shop and talk to the

owner. He will thank you. Notify dispatch of your success. On your return to the police station step in the hallway and examine the table. You will notice a memo pad and inkst trays. Put in memo to transfer to narcotics. Place memo in in tray and return to patrol.

Your next call will be to a drunk driver. Chase, then approach with caution. Before getting out of car, notify dispatch. They will give you information on the suspect. When you arrive at the suspect's car type "smell", then "examine licence". Return licence. Tell your suspect to "get out" then type "FST". The suspect will blow into the bag. Then "cuff him". The man will ask you to cuff him at the front. Type "no". Then type "read rights", "question suspect". Tell him to follow you to the car. Open door and tell suspect to get in. Notify dispatch and go to jail.

When you arrive at the jail, open the door and tell your suspect to follow you. Remember always to close your door or your car will be gone when you come back. Open the lockers outside the jail and put your gun in (weapons are not allowed inside the jail) then close locker and press button on the wall. The jailer will open the door.

Enter and he will ask you what the charge is. Type "drunk and driving". You must tell the jailer to book the suspect. Then type "remove cuffs" and put him in cell. The jailer will have a message for you. Do as he requests.

CONSOLE

**Yourself
at**

Programmers, artists and musicians required for major licenced projects across all the major home computer systems and console machines. Top rate salaries, financial security, programming support and flexible working environment.

Please contact or write in confidence enclosing a C.V. to

Eergus McGovern
PROBE SOFTWARE LIMITED
Unit 9, 38-42 Tamworth Rd.,
Croydon, Surrey, CR9 1XU

Tel: 081-680-4142

IN HOUSE PROGRAMMER

Electronic Arts is looking for experienced programmers to join in the growth of it's in-house programming team. Candidates should have a proven back ground in 16 Bit software and should be fluent in 'c', 68000 and 80X86 assembler.

The qualified candidate will be programming games for 16 Bit machines using the latest technology and must be enthusiastic about Entertainment Software. They must also be highly self motivated and able to work in a very competitive industry.

Electronic Arts provides a comprehensive employment package. Salary is negotiable, depending upon experience and includes a bonus scheme and private medical cover.

Qualified applicants should send a C.V for the attention of C. McLaughlan at :
Electronic Arts, Langley Business Centre,
11-49 Station Rd., Langley,
Slough.
Berks. SL3 8YN

PROVEN WORLD LEADERS IN 16 BIT SOFTWARE WE ARE NOW EXPANDING INTO THE FUTURE HOME ENTERTAINMENT SYSTEMS.

PSYGNOSIS ARE ALREADY DEVELOPING SOFTWARE FOR LEADING EDGE SYSTEMS SUCH AS AMIGA CDTV FUJITSU FM TOWNS CD NEW PC ENGINE CD ROM SEGA GENESIS NINTENDO 16 BIT CONSOLE

If you want to be part of the Future and feel your skills as a creative programmer, artist or musician on 16 bit machines, including Amiga and ST, are something we should hear about, come and have an informal chat with us on Stand G12 at the CES Show (Earls Court, 13-16 Sept)

We look forward to meeting you.

CHART

1990 TOP TENS

The ACE Charts system kicks off in its new Pink Position by giving you the definitive list of top scoring games as reviewed by ALL British games magazines. These are the high scorers so far in 1990...

WHAT THE FIGURES MEAN...

First, of course, you've got the name of the game. Then the software house and - in the last column - the average score (converted to a per centage with typical ACE precision to two decimal places) the game received in ALL reviews. The month tells you when the game received its listed rating.

Don't forget that the review ratings are taken from all UK magazines, not just ACE. We don't agree with some of the judgements here, but all review ratings are, to a certain extent, subjective and depend on both the policies of the magazine and the preferences of the reviewer. In our opinion, Kick Off 2 on the Amiga should get a higher rating than Operation Thunderbolt.

THIS MONTH

Each month we pick exactly five games, as reviewed in the latest reviews of computer magazines, for each of the main computer platforms. Don't forget, because scores are based on relative ratings around the country, they make an excellent buying guide.

AMIGA

Cooperative Core Design 82.5
Kick Off 2 Anco 81.63
Hurricane Rainbird Arts 80.8
Paradise 90 Hewson 80.25
Klax Domark 80.09
Int'l Kick Off 2 Turanian 79.63
We had to move for this month's list of the best. Game Designers' Corner.

COMMODORE 64

Hammerfist Activision 82.5
Klax Domark 82.04
Hammerfist Image Works 80.09
Head Master! Papyrus 80.09
Rocky 1990 US Gold 79.5
US Gold's Alpha Strike-style mystery game comes from somewhere to take it to the C64 hot

charts (only 1990 as yet) for the World Cup release.

AMSTRAD CPC

Sound Car Ramon Miro Style 84.5
Coco Collection Hewson 80.0
Klax Domark 80.06
Rocky 1990 US Gold 80.04
Fighter Bomber Activision 82.56
Second month in the chart for Hewson's Outgunners and Domark's well-reviewed Klax. The CPC version of Sound Car Ramon looks as though it's been worth the wait.

IBM PC

PGA Tour Golf Electronic Arts 86.66
Thunderstrike Millenium 84.94
Rail Road Origin 86.25
Powerplay Activision 79.5
Game or Better Microprose 78

Not a single one of these could manage an average score of over 80%! PGA Golf is in hand for the second month running and looks like a good solid buy.

SPECTRUM

Head over Heels! PRC 86.25
Midnight Resistance Ocean 81.17
Hammerfist Domark 80.0
Rocky 1990 Anco 80.0
Adeline Orville Pleadford 80.04
Hammerfist Domark 80.04

A very erratic chart before any year Spectrum averages releases, software houses! But our reviewers' Head Over Heels has even managed to score exactly the same as last month.

ATARI ST

Kick Off 2 Anco 86.5
Sim City Infogrames 81.33
Int'l Kick Off 2 Virgin 85.75
Int'l Kick Off 2 Virgin 85.75
Head Master! Papyrus 80.09
Rocky 1990 US Gold 80.09
A completely new top five for the ST! Sim City and Kick Off 2 are, of course, already status as iconic classics.

Data collected and collated by David's Outrage Professional.

ACE DEALS

Liverpool-based City Software is kicking off the football season with a month-long extravaganza of competitions and special offers. The store has promised to get its hands on every football game it can sell in the shops, while prizes such as T-shirts and badges are on offer to winners of its spot-the-ball quick competitions.

City Software is also hoping to feature the Sega Megadrive strongly when that reaches the shops and a night out at the movies for its Back to the Future II raffish.

In Yorkshire, Computer Store outlets are holding a big trivia-style competition where the prize on offer is a Nintendo Entertainment System. Any purchases you make from any Computer Store branch will come complete with a card bearing four simple computer/console-oriented questions. Get the answers right and you'll be in the running for the Nintendo.

Computer Stores will also be holding special promotional days throughout September when a particular software package, or series of titles, will have prices and freebies thrown in with them when you buy. Check with your nearest Computer Store outlet (locations below) for details of each big price day as they come up.

There are still plenty of the Computer Store Amiga packs to go. For the usual selling price of £395, you can buy not only Commodore's Amiga Buspack or Night of Fantasy pack, but take away £200-worth of extra accessories as well, including more software, a mouse and T-shirts.

Core Design will be making a personal appearance at the **Virgin Games Centre** on Saturday September 8 and they're bringing their Corporation scanner with them. So if you fancy owning a copy of Corporation personalised to include your own digitised mug and name in the game, be there. Normally, you own Corporation persona will cost you £2, at Virgin it will cost you £1, and that offer lasts throughout September.

Computershops are adding a £1 gift voucher to every Sumax Zipstick joystick that you buy, and, in a back to school flame of mind,

Our regular column highlighting special offers around the country. Useful to check out before you head for the shops...

there's a free pencil case going with every copy of Database's new *Fun School 3* sold.

OUTLETS

City Software is on Lime Street, Liverpool.

There are Microbyte stores in the Arndale Centre, Manchester; the Broadmarsh Centre, Nottingham; Kitegate, Wakefield; the Metro Centre, Gateshead; the Greenmarket, Newcastle Upon Tyne; the Kinggate Centre, Bradford; the Bull Ring Centre, Birmingham; the County Arcade, Leeds; and Pasture Road, Gosport.

You can find Computer Shop outlets in the Arndale Centre, Manchester; Newcastle, Leeds, Preston, Sunderland, Stockton and Nottingham. Also part of the Computer Shop chain are the two Games Store outlets in Carlisle and Middlesbrough, which stock role-playing games as well as computer software.

Virgin has its Games Centre outlets on London's Oxford Street (at Marble Arch, within the Megastore, and at no 100 and Birol), and also in Megastores in Birmingham, Brighton, Dublin, Edinburgh, Glasgow (at Union St and Argyle St), Leeds, and Nottingham.

You can find Computer Shop outlets in the Arndale Centre, Manchester; Newcastle, Leeds, Preston, Sunderland, Stockton and Nottingham. Also part of the Computer Shop chain are the two Games Store outlets in Carlisle and Middlesbrough, which stock role-playing games as well as computer software.

All offers and promotions are subject to availability of stock. Although we do our best to ensure our dealer promotion information is accurate at the time of going to press, ACE cannot take any responsibility for changes or cancellations to dealers plans.

Attention dealers! Don't keep your promotions, competitions, special offers, etc., a secret. Tell us at ACE and we'll tell everybody else.

SHOP WATCH

A new regular section in which software seller Dirk Longhorn gives a view from the other side of the counter. This month, could the ST be dying out...and why?

It doesn't seem that long ago since Commodore 64 and Atari 800XL owners used to congregate together in our store and argue about which was the better computer. The discussions were sometimes tedious, occasionally loud, and invariably childish but there were always pointless. Neither group would alter its opinion, no matter what evidence was presented in either machine's favour.

Not long after these happy scenes took place, the whole argument became irrelevant. The Atari 800XL began to die, partly due to Atari discontinuing production of the machine and partly due to the attitude of Atari owners. A typical Saturday would see several groups of Atari owners enter the store together to check the software racks. Their comments were depressingly similar.

Got it. Got it. Got it. Got it. Got it this week. Got it. Had it two years ago. Got it. Got it.

This would even apply to new releases. The plucky network on the

Atari 8-bit was so vast that it seemed most of the owners got the latest titles before the shops. They would stand around talking about 'Happy Cartridges' and copies of games that were, at that time, unfeared and would occasionally make conversation with us in their smug, sneering manner.

'Have you got Winter Games in yet?'

'I'm sorry, it's not released yet. Isn't it? (Snigger) Oh, I've had it for months.'

Eventually of course, retailers realise that stocking full price software for the machine was pointless, and would stop. With retailers not stocking new releases, it wasn't long before the majority of software houses stopped publishing them, and that led to the machine taking its place in the computer graveyard alongside the Oric, Dragon, (original) Lynx, and all the other one-time familiar names.

The sad part was that there were (and still are) Atari owners who are not pirates. They have had to suffer for the sins of their peers.

AND NOW...

Several years on and we find Commodore and Atari owners still bitching. Now, though, the arguments take place in the letters columns of magazines and the machines are the Amiga and the ST. The disturbing thing is how many Atari ST owners have upgraded from Atari 8-bit machines because there is no software for them (ever wondered why?).

Equally worrying is the fact that the old network still seems to be intact and there's disturbing evidence that it may be doing for the ST what it did for the 800XL.

It is widely believed that the ST has (to date) outsold the Amiga in this country. Certainly a close look at market research indicates that the machine (despite Increasing Amiga sales) still has a larger user base than the Commodore machine in the UK. Why then, despite the majority of 'big' titles being £5 more expensive, do we sell FIVE TIMES as much Amiga software as ST?

I know that we are not alone in this respect, and here's a trade secret - one of the major software houses will release future products first on Amiga format, and ONLY if it sells 'well' will then be released on the ST. Dajia ju anyone?

I sincerely hope that the ST does not follow its predecessor into oblivion, but if it does...you'll know why.

To change the subject somewhat, I noticed that the September issue of ACE carried an update review of Red Storm Rising (Amiga version) and gave it the fairly low mark of 603. I realise that reviews are subjective, but if you like Microprose type games don't be too put off - I'm absolutely hooked on it.

ENCYCLOPAEDIA MICROMANNICA

Here it is... a list of those vital topics that every up-market gamer needs to have at his command. Just because you thrashed the host at two-player Tetris doesn't mean you'll be the slay of the party. No chum, you need know-how. And here it is...

Each entry has a brief explanation, followed by a reference to an issue, so that you can hunt down the full lucid, in-depth, ACE assessment.

If, however, you missed an issue because you were abroad on a covert SAS operation or nursing a sick relative in Botswana, or some other unlikely excuse, fret no longer. Back issues are available for all issues from ACE 4 inclusive (except ACE 11) at the giveaway price of £2.50 each in the UK and £3.50 each for overseas. These prices include post and packaging (surface mail). Overseas readers wanting airmail delivery should enquire as to the cost at the address below. Listing the issues required.

To order, clearly list the required issue numbers and send them, along with your full name and address and a cheque or postal order for the full payment made payable to ACE magazine, to **ACE Back Issues, PO Box 500, Leicester LE99 6AA.**

- **ACE CONFERENCES** gave you the only opportunity to meet software houses and talk to them about their games. Lunch is supplied and admission is free to subscribers, who also receive priority allocation. ACE readers have already visited Domark (issue 34), Activision (issue 36) and Mirrosoft (ACE37).
- **ASAT (AVIONICS SITUATIONAL AWARENESS TRAINER)**, combat flight simulator for the US Air Force by Paracore. Uses Falcon software by Spectrum Holobyte/Mirrosoft. Features include: networking for multi-player action, tactile feedback and fingertip weapon selection. [ACE14]
- **BATMAN DIGITAL JUSTICE** is the world's first interactive hypercomic by Pepe Moreno. "Digital is the art medium of the future" [ACE30]
- **BATTLETECH**, "the world's first complete computer simulation for play", featuring multi-player cockpits equipped with 40MHz 16 million colour graphics processors, stereo spatial sound and tactile controls as you command 31st century Mechs. [ACE28]
- **BIT BOPPER**, the world's first total audiovisual entertainment system by Technicon. Alex Blok's cyberscratch bit-bopper packs twin 32-bit decks, Sony erasable optical disc and custom-made video samples. [ACE19]
- **CD-I (Compact Disc Interactive)** is destined to become the entertainment and education medium of the 90s. [ACES/21/22/24/32/33/35]. Check out Issue 30 for multi-media principles

Not hip to Hypergames? Feeling confused by CD-I? Mind's a void when it comes to VOOGs? ACE has the answer....

(hypermedia in particular) and issue 24 for a preview of the Philips CD-I system.

- **CDTV**, Commodore's attempt to bring multi-media to the mass-market. An Amiga with built-in CD-ROM drive and CD-audio capability, redesigned to look like a VCR. [ACE34]
- **COSMIC OSMO**, the world's first hypergame courtesy of Cyan Software/Activision. Check out issue 23 for the first review, issue 24 for a feature on hypergames, and issue 30 for general hypermedia coverage. New Osmo CD-ROM version featured in issue 35.
- **DUNE**, the world's first hypergame creator by ORL. [ACE30]
- **DUNGEON MASTER**, seminal 949 ACE-Rated fantasy role-playing game by FTL/Mirrosoft. [ACE8]
- **FLARE TECHNOLOGY**, trio of talented Cambridge-based games hardware engineers. Their custom-designed Flare One micro formed the basis of the Konix console. [ACE11]
- **FUJITSU FM TOWNS**, a 32-bit 16 million colour computer with built-in CD-ROM drive. If you bought ACE 31 you could have won one! [ACE27]
- **HYPERGAMES** like Cosmic Osmo and Batman Digital Justice are paving the way for CD-I entertainment. [ACE24/30]
- **INMOS FLIGHT SIMULATOR**, the world's first multi-player Transputer game running at 23 frames per second on 11 Transputers. [ACE7]
- **INTEGRATED FLIGHT AND ENTERTAINMENT SERVICES SYSTEM**, Pressay's answer to boring plane journeys - video games played on the seat in front of you. [ACE25]
- **INTERACTIVE VIDEO TAPE**, an alternative to CD-I. [ACE26]
- **JOYSTICKS**, fortunately ACE hasn't been desperate enough to write a joystick review in three years!
- **KONIX CONSOLE**, a powerful British console with revolutionary built-in joystick controller which could change into a steering wheel, motorbike handle or aeroplane yoke. Ultimately failed due to a lack of marketing money. Rumours suggest a new buyer is interested. [ACE18/29]
- **LIGHTSPEED SPRITES**, three researchers from Carnegie Mellon University, USA have developed an algorithm enabling them to generate graphical simulations of objects seen travelling at 99% of the speed of light. [ACE34]

• **MEDIA LAB**, Boston-based research institute with one simple brief - invent the future. People at this Massachusetts Institute of Technology (MIT) facility are working on computer-generated holograms, interactive computer newspapers and virtual reality man-machine interfaces. [ACE9]

- **NEO-GEO**, a new home- and arcade-based games console from SNK in Japan, with storage capacity for 64Mb games cartridges and IC card capability. ACE gave you an exclusive chance to win one in issue 34. [ACE32/34]
- **POPULOUS**, highly influential 953 ACE-Rated arcade strategy game by Bullfrog/Electronic Arts. [ACE18/19]
- **RENDERMAN**, the unique 3D graphics system by Pixar which creates polygons with photorealistic detail. [ACE35]
- **SIM CITY**, another influential 945 ACE-Rated game - the urban simulator by Maxis Software/Infomagazines. See also SIM EARTH by Maxis Software/Ocean in ACE 35. [ACE24]
- **THEATRE SIMULATOR**, Walt Disney's hitch theme park ride come flight simulator based around the movie magic of Star Wars. Experience it for yourself at Disney's theme parks in California, Florida, Japan or Paris (in 1992). [ACE27]
- **TURBOEXPRESS**, currently the best colour handheld console - a portable version of the NEC PC Engine, fully compatible with existing games cartridges. [ACE35]
- **ULTIMA VI**, 950 ACE-Rated fantasy role-playing game from Origin/Midscape. [ACE31/33]
- **VOOGs** (Voice-Operated Online Games) use voice recognition technology to allow spoken commands by the player. The ACE interactive News Line utilises similar voice-tech. Just dial 0899 555563. Calls cost 38p per minute peak, 25p per minute off-peak. [ACE11]
- **ZARCH**, influential 979 ACE-Rated shoot-'em-up by David Braben using a new solid 3D viewport. [ACE3]

TNT - IT'S DYNAMITE

There's another very good reason to check out back issues - because they could help you track that game that's got you scratching up the walls and pulling hair out of the dog. There are four pages of bricks, tactics, and shameless cheats in every issue of ACE - a guidebook for a man picking his way through a minefield. So... which issue do you check to find the answers? Ah! We haven't got the space to tell you! So you'll just have to wait till next month, when we publish the TNT Dismantling Guide - a complete database of all the games we've covered in ACE... and which issue to find them in.

HOW TO PLACE YOUR ENTRY

All you have to do is send off the form below, together with your payment;
 Entries to the Pink Pages cost just £6.00 each. (Except for helpline which is free).

- The maximum is 20 words except for Helpline. (Helpline entries can be extended to 100 words max – use another sheet of paper if necessary).
- The service is NOT open to trade advertisers.
- We will print your advertisement in the first available issue.
- Entries which could be interpreted as encouraging software piracy will not be accepted.

ENTRY FORM

POST TO: ACE Readers Page,
 Emap B+CP, Priory Court,
 30-32 Farringdon Lane,
 London EC1R 3AU.

Category of entry:

- ☐ Helpline ☐ For Sale
☐ Wanted ☐ Pen Pals
☐ User Groups ☐ Other

Write your Advertisement here, one word per box.
 Include your name, address and phone number if
 you want them printed.

Please place my ad in the
 next available issue of ACE.

Method of Payment

Name

- ☐ Cheque ☐ P.O.

Address

Please make cheques and
 postal orders payable to
ACE MAGAZINE.

THE W E E K E N D

ALOHA ACTIVISION

Activision, the veteran American software house, has decided to stop supporting the Amiga, ST, Spectrum, C64 and CPC. Instead the company will concentrate on the PC, Nintendo Entertainment System, Gameboy, Super Famicom and Compact Disc projects. Activision's UK operation in Reading has been immediately cut from 34 to 10 personnel, and there will be only two people working for Activision UK by January 1991.

Although this decision is a shock, the reasons for it have been on the cards for years. Activision US, now called Mediagenic, lost nearly \$20 million dollars last year, and is facing a \$6 million dollar bill after losing a long and embittered court battle with Magnavox. This Philips subsidiary has successfully claimed copyright infringement on a video game from the early eighties. Activision also spent millions of dollars buying prestigious adventure developer, Infocom, only to close it down earlier this year. Mediagenic is believed to be up for sale, but customers have been thin on the ground.

The whole situation is very sad. Activision has sold some great games in the past, it started in the early 80's producing video games cartridges for the Atari VCS, David Crane's Pitfall probably being its best console release. A switch to micros in the mid-80's brought even greater success with the classic Pastmaster, but then Hero and playable River Raid - plus my personal favourite, Park Patrol.

Activision produced two of the most original computer games ever (AIEIE Ego and Little Computer People) and, in 1984, one of the best selling computer games ever, Ghostbusters.

Other Activision titles include: Aliens, Predator, R-Type, Afterburner, Warhead, Hammerfest, Rampage, Galaxy Force II, Power Drift, Mechwarrior, Howard the Duck, Hacker, Die Hard and Ghostbusters II.

Activision UK also handled System Three, Sierra On-Line and Lucasfilm games in the past including The Last Ninja, IK+, Leisure Suit Larry, Rescue on Fractalus, Karons Rift, The Edolon and Balblazer.

PLAYING GAMES FOR BRITAIN'S FUTURE

The success of Britain's future business depends on you - the dedicated games playing public. According to a recent report by the MSC (Manpower Services Commission), British industry should harness your interest and enthusiasm for Advanced Computer Entertainment, to prepare you for dealing with mechanisms for the rest of your working life.

So the next time you've playing Defender or GL0C in the arcades, keep an eye out for slot-out from BP Barclays Bank or British Airways.

HANDHELD HELP

A Reader has written in with a handy tip for Gameboy and Lynx owners spending too much money on AA batteries. "Save money buying new batteries by swapping the batteries in your friends Walkman."

Don't forget CES - "the greatest gameshow in the universe" The European Computer

ACE HAPPY HOUR HOTLINE

You've already met the new FACES on the magazine, David Upchurch (left) and Alex Kurnick, in the beginning of the column Pink Piglet. Now you can actually speak to those self-named games addicts via our special ACE HAPPY HOUR HOTLINE. Are you stuck on the 8th level of Whom Kingmakers II? What games is ACE playing this week? Which video games console should you buy? When will the Fujitsu FM Town, NEC PC Engine or Nintendo Super Famicom become officially available in the UK? Have you got any questions regarding Advanced Computer Entertainment?

ACE has all the answers. Just call our HAPPY HOUR HOTLINE on 021 261 6322 and ask for David or Alex. The Hotline is open Monday-Friday from 5pm-6pm (it will temporarily close every month during the ACE deadline period). Sorry, we cannot accept calls outside the Happy Hour.

And while we're talking FACES, we thought it was a pretty shabby state of affairs that although an editorial team got our clout in the magazine, the men who put them there didn't. We therefore trust our female readers will operate the likewise beauty of Art Editor Jim Mills, who - and no kidding here - has done so much work on ACE over the past few months.

Entertainment Show is the only show dedicated to the latest in games software and hardware from the leading brands names. Enjoy the live entertainment. Meet your favourite celebrities. Maybe even appear on TV. Try out the newest games and equipment from some of the biggest names in the industry including Commodore, Sega, Nintendo, Amstrad, Ocean, Microsoft, US Gold, VirgynMastertronic, Domark, Gremlin and Accolade. Contribute to Childline charity. Visit Living Room of the Future, sponsored by ACE.

CES, Earls Court, London, 15-16 September, 10am-6pm, see you there!

HALLOWEEN COMPETITION TOKEN

Cut out this token and stick it on a postcard with the answer to the question asked in last month's issue. If you win the Origin Halloween Competition with this token you'll get an extra £500 spending money! See ACE 35 for further details.

ACE HALLOWEEN TOKEN

PLOT YOUR OPPONENTS DOWNFALL AND...STRIKE

Plotting

It seems so easy, but can you beat the micro or your partner, at this hideously mind boggling game.

Special blocks will give you extra lives... GREAT!... but believe me, you'll need to take every advantage of this software's hardware! You'll need the skill of a Rubi-Cube master and the reflexes of a pigeon at a skeet shoot! Plot your move, take aim and block 'em out!... It's that simple... as simple as grilling ice cubes!
